ARTHUR WOODS

Formerly Police Commissioner of the
City of New York, now colonel in the
United States Army, whose vision and
cooperation made the work of the
Bomb Squad possible, this volume is
respectfully dedicated

INTRODUCTION

Inspector Tunney's Squad was formed early in August, 1914, to specialize in organized crimes of violence. It did some radically effective work against Black Handers, and handled several cases against domestic enemies of law and order, but as time wore on and war developed, the Squad's energies became directed solely against the nefarious activities of Germans among us.

Inspector Tunney is a most skilful detective, resourceful, persistent, understanding human nature, a good leader. He picked a squad of fearless, tireless men, who not only worked long and hard, but showed marked skill and tact. They proved themselves to be Americans all the way through, aggressive, loyal, bound to put the job through, no matter what the difficulties might be. They were occupied in hunting out Germans who were outraging our neutrality; and then — after we finally started to make war against those who had so long been warring against us, on the high seas and in our very midst — they set to work to thwart and capture active German enemies. The results they

got went far toward making it possible to maintain order in New York during those months and years which were full of such menace to the safety of the city, when the national danger seemed so plain — so increasingly plain — and the national military strength was so woefully weak. In many cases the Inspector worked in coöperation with one or more of the Federal Secret Service forces. The Federal work was seriously hampered, however, at first by hopelessly inadequate organization, and, later, by the existence of several entirely distinct forces, instead of one powerful, unified body.

Inspector Tunney has written a most interesting book. Much of what he tells I knew about at the time, from conference with him, or with Major Scull, Colonel Biddle, or Major Potter, and some of the events described I had intimate knowledge of because of personal attention to the cases. Some, however, I personally know nothing about, as they have taken place since I left the Department on January 1, 1918. And a vast amount of good work, of real public service, was done by Inspector Tunney and his men that is not touched upon in this book, that probably will never be written, since, though of great value to the public peace, it lacks some of the dramatic features which characterize the tales that are told.

No one can read the book without seeing how brutally active our enemies were here in this country, even while we were at peace with them, how they flouted our neutrality brazenly and contemptuously, how they busied themselves through their accredited officials and their many secret agents in trying to paralyze our industrial life. Their deliberate effort was to prevent the shipment of all vital supplies to the Allies, and they sought this end by fomenting labor troubles, by burning factories, by blowing up ships. It mattered not the slightest to them that in this kind of activity they destroyed the property of a people at peace with them, nor did they give a deterring thought to the fact that they were maiming and killing human beings with their burnings and blastings. It did concern them, however, to keep things dark, to work under cover, so that they might continue this underhanded war against us without being found out. It was the warfare of the savage, who knows not fair play, who is guided by no rules or customs, who strikes down his enemy in the dark, from behind.

The lessons to America are clear as day. We must not again be caught napping with no adequate national Intelligence organization. The several Federal bureaus should be welded into one, and

that one should be eternally and comprehensively vigilant. We must be wary of strange doctrine, steady in judgment, instinctively repelling those who seek to poison public opinion. And our laws should be amended so that while they give free scope to Americans for untrammelled expression of differences of opinion and theory and belief, they forbid and prevent the enemy plotter and propagandist.

There was another part of the Squad's work, which had to do not with foreign, but with domestic, enemies. The industrial condition of unemployment, which was so sharp in 1914 and 1915, was exploited by those who believed in propaganda by violence, hoping to find eager and bitter listeners in the thousands who could not get work. To ameliorate the hardships of the situation the police in New York tried several plans which were at that time rather new as police methods. They found jobs for people; they afforded relief in cases of distress from funds, more than half of which were subscribed by policemen. When street meetings were held and excitement ran high, they held unswervingly to the line of conduct mapped out for them. They not merely permitted free assemblage but protected meetings so long as they kept the laws; and the law was kept if the meeting

did not incite to violence or obstruct the highways. In case of threatened violence, action, prompt and strong, was taken to prevent it. Order must be maintained. Inspector Tunney's Squad were actively engaged here, not in trying to bottle up the preachers of any particular doctrine, but simply in finding out who were the plotters of violent deeds and bringing them to justice.

I believe the police methods in these times were wholesome and effective, and are the right ones to follow in times of public excitement and industrial disturbances. They make it clear in practice that leeway will be given to all for the full exercise of their lawful rights; and equally clear that adequate means will be taken to prevent recourse to unlawful measures. In many places in this country where serious disorder and bloodshed have come to pass, the trouble seems to have been fostered, at least, by the denial to groups of people of some of their lawful rights.

I hope this book will help to teach another lesson also: the need in our police forces of brains and high morale; the need of cultivating the professional spirit in them, that shall dignify the work, shall banish political influence and all other influences that go to break the heart of the policeman who tries to do his plain duty; the need of

having the public take an intelligent interest in police methods and results, doing away with the smoke-screens of mystery and concealment which are traditionally employed to cover dishonesty or incompetency.

THROTTLED!

THROTTLED

I

THE BOMB SQUAD

For the past twenty-three years I have been a member of the police department of the City of New York. It is a long time, in any single job. The department is comparable in size to a manufacturing establishment of the first magnitude — it employs more than ten thousand men — and its occupations are varied enough to suit the inclinations and ambitions of any man. And so I went through the mill, graduating from one duty to another until in 1914 I was an acting captain, and had been in charge of various branches of the Detective Bureau in Brooklyn and Manhattan.

My duty was the detection of crime, my specialty, meaning by that the special branch of crime with which I had been most often thrown into contact, was bomb-explosions. As far back as 1904 there were a number of mysterious explosions in New York which caused considerable property

damage, and there I made the acquaintance of the bomb itself. It was an interesting subject for study, and a wicked weapon in use. I managed to pick up information of bomb-manufacture in several ways: Black-Handers, in prison, told me how they had made their missiles; at the New York office of the Du Pont explosives company I had an opportunity to study blasting; the publications of the Bureau of Mines furnished more information, the practice of the Bureau of Combustibles of our own department proved interesting and instructive, and I found myself before long forced to become something of a student of chemistry.

The difference between our work and the work of the laboratory chemist, however, was that in our case there was no time to make an explosive mixture and test it — some criminal usually had done that for us, and we were called to the scene to find out, from such clues as the wreckage afforded, the name and address of the criminal. The laboratory chemist mixes ingredients and counts his work done at the moment of explosion; the detective begins at that moment a stern chase, and a long one, back to the ingredients and the man who mixed them.

By the early part of 1914 I had seen a good deal

of experience in tracing bomb outrages to certain of the anarchistic and Black Hand elements in the population of the city. As the year wore on these occurrences became so numerous as to warrant special attention, and on August 1, the approximate date of the outbreak of war in Europe, Police Commissioner Arthur Woods created in the police department the Bomb Squad. I was in command, and reported direct to the Commissioner. As the volume of work increased, and more men were taken on, the Commissioner delegated his supervision of the Bomb Squad to Guy Scull, who was then Fifth Deputy Police Commissioner, and who is now a major in the United States Army. That supervision was later passed on to Nicholas Biddle, a Special Deputy Commissioner, who, as I write this, is lieutenant-colonel in the United States Army, in charge of the Military Intelligence Bureau in New York; and following Mr. Biddle, Fuller Potter, another special Deputy Commissioner, and now a major in the Military Intelligence, directed the policies of the Squad.

Within a few months the personnel of the Bomb Squad included the following picked men: George D. Barnitz, Amedeo Polignani, Henry Barth, George P. Gilbert, Edward Caddell, Patrick J. Walsh, Jerome Murphy, James J.

Coy, Valentine Corell, James Sterett, Henry Senff, Michael Santaniello, Joseph Fenelly, Joseph Kiley, Charles Wallace, William Randolph, Thomas Jenkins, and Anthony Terra — all detective sergeants, and George Busby, a lieutenant. To this list were added the names of James Murphy, Robert Morris, Thomas J. Ford, Walter Culhane, Vincent E. Hastings, Thomas J. Cavanagh, Louis B. Snowden, Thomas M. Goss, Daniel F. Collins, Frederick Mazer, Edward J. Maher, Walter Price, William McCahill, and Cornelius J. Sullivan. It made a list of fine material for the work which we were called upon to do, and no one will begrudge me here a word of tribute to their aptitude, their courage — to all of the qualities which made them such able and vigilant guardians of the neutrality of our country during the years preceding our entrance into the war. Many of the Bomb Squad went to war later: Barnitz became a junior lieutenant in the United States Navy, in intelligence work of a high order. Barth, Caddell, Corell, Fenelly, Jenkins, Walsh, Sterett, Santaniello, Randolph, James Murphy, Morris, Ford, Culhane, Hastings, Cavanagh, Snowden, Goss, Collins, Price, Mazer, Maher, McCahill and Sullivan became sergeants in the Corps of Intelli-

Lieutenant-Colonel Nicholas Biddle, Military Intelligence

gence Police of the National Army. And after I became connected with the Military Intelligence Branch of the War Department, I had frequent occasion to deal during the war in coöperation with the men whom I have mentioned in service.

My first desire in taking charge of the Squad was to suppress the activities of persons using explosives to destroy life and property. What knowledge of the physics and chemistry of explosives my experience had accumulated I passed on to the men. These periods of instruction went into considerable detail. We discussed the kinds of explosives used, their relative strength, their ingredients, the methods of detonating them, the containers into which they were loaded, and the use of clockwork, fuses, acids and gas-pressure to explode them. Special and explicit instruction was given for the handling of unexploded bombs — a bomb bearing an electrical attachment should not be placed in water, for example, as water is a conductor of electricity; it is wise never to smoke in the presence of explosives, even if you think you know that certain kinds of explosives “*never* explode by fire.” The only thing you can depend on explosives to do one hundred times out of one hundred, is what you don’t expect them to do. The Bomb Squad was told never to —

and why never to — carry bombs on passenger trains, cars or ferries, or anywhere near where metals were being shipped. The Bomb Squad was instructed not to remove a bomb found in a position where its explosion would not endanger life and property, but to send for an expert and wait until he arrived on the scene, and was told which positions were dangerous and which were not. Altogether we conducted a rather thorough course in explosives.

As the war grew in proportions, and the interest of America in the conflict became more and more intimate, the activities of the Bomb Squad became somewhat diverted from the object for which it had been primarily organized, and its title was changed to the "Bomb and Neutrality Squad." We had not expected in August that the German would try to tip over our neutrality with bombs, but that is what he did, and that is what kept us grimly busy for three years, until our own nation had gone to war with those who had so long been waging war upon her. And that is how the stories which follow come to be told.

Not that the entrance of the United States into the war put a stop to the activities of the Squad. I have already cited those who entered the na-

tional service. Their presence in the Naval and Military Intelligence, their close relations with those whom they left behind in headquarters, with such men as Commander Spencer Eddy and Lieutenant Albert Fish of the Navy, Colonel Biddle and Major Potter of the Army, and with the Corps of Intelligence Police, made possible a degree of coöperation in spy-hunting in New York which would have been impossible to develop within a short time with any other set of men, and which went far towards preserving our domestic security.

II

WESTPHALIAN EFFICIENCY

The trend of events in early 1915 made it apparent that the Bomb Squad would be called upon to handle more and more cases of attempted violation of neutrality. Anyone who remembers our national mind at that time will recall that it was not yet made up and very liable to attacks of brainstorm. Every person was seeing events of unheard of violence and magnitude pass him pell-mell, giving no warning, and not waiting for comment, and he was too dazed to watch any single event with any high degree of balanced judgment or reasoning partisanship. It was a troubled hour, and one in which it behooved us of the Police Department to keep our heads cool and our eyes open. The Bomb Squad had to act as a safety valve.

By the summer of 1915 war orders placed by the Allied governments in the autumn and winter of 1914 were being filled and shipped overseas in

great quantities. By this time, too, the German navy showed no more sign of coming out of Kiel in force than it had shown for a year past. The task of delaying, diverting or destroying those shipments devolved upon the Germans in America. It took no superhuman amount of reasoning to combine the abnormal destruction of property in New York with the strong suspicion of German activity and to arrive at a decision to check up wherever it was humanly possible the sources and agencies of destruction.

Late in the autumn, in our work on the waterfront, we found a man who, we decided, was worth watching. We learned gradually that Paul Koenig was a pretty well-known figure along both banks of the Hudson, and that he carried, as chief detective for the Hamburg-American Line, a certain amount of authority. That steamship line, which within a week of the outbreak of war had attempted to send ships to sea under false cargo manifests to supply the German naval raiders, now had more time than business on its hands as its entire fleet was tied up in Hoboken. And yet in spite of the dull times which we knew had been thrust upon them, their man Koenig was curiously busy, and we became busily curious to find out why.

We were more curious than successful at first. We assigned men to follow him and observe his habits and haunts. This was not as easy as it might have been with another man, for the Department of Justice had already tried it and had come to the conclusion that he was not worth following.

Now a good shadow is born, not made. The moment the man followed realizes or even suspects that he is being followed, he becomes a problem and either gets away or conducts himself in a way which disarms suspicion and sometimes embarrasses the pursuit. Koenig, a man of keen animal senses, was unusually quick in discovering his shadower. It used to confuse certain agents considerably to have him disappear around a corner, and when the agent quickened his pace and swept around the same corner after him, to have Koenig pop out of a doorway with a laugh for his pursuer which meant that the day's work had gone for nothing. I have known men who were excellent detectives and poor shadows. Sometimes they were too large and conspicuous, sometimes they were over-zealous, sometimes they excited suspicion by being over-cautious; rare enough was the combination of artlessness and skill which made a man a good shadow, told him

Copyright, International Film Service

Paul Koenig, the Hamburg-American employe, who supplied and directed agents of German violence in America

when to saunter away in the opposite direction, when to pass his man, and how to efface himself. It is, I think, the instinct of the good fisherman who knows just how much line to run out, and just when to exert the pressure. For Koenig was a slippery fish.

By a new method of "tailing" or shadowing, we learned that he frequented several popular German places in the city, such as Pabst's in Columbus Circle, the German Club, in Central Park West, where Dr. Albert, Boy-Ed and von Papen frequently went, Luchow's restaurant in 14th Street, as well as the good American hotels Belmont and Manhattan. Both of the hotels are centrally situated, and have several entrances, including direct connection from the basement with the Subway — one of the easiest places to lose oneself in the city. (A murderer not many months ago avoided arrest for two days by riding back and forth in Subway trains.) But such places as these were no more than the natural points towards which any German might gravitate, and we could never pick up a scrap of conversation to give us a lead in any specific direction.

The fact remained that he was busy, going and coming, and that he conducted a good deal of his business from his office in the Hamburg-American

building at 45 Broadway. We might as well have tried to penetrate to Berlin with a brass band as to have entered the building for information. But there was one advantage we could take: we could "listen in" on his telephone wire.

When the men tailing him reported in that he was in the Hamburg-American Building, and probably in his office, we cut in on his wire, and posted an officer at our receiver to take down all conversations which passed. The outgoing calls were disappointing. Koenig was no fool — or rather was a highly specialized fool — and was not careless enough to give information of aid and comfort to the enemy through such a gregarious medium as a public telephone wire. We listened for a long while, in vain. . . .

Then came a call which offered possibilities. A man's voice told Paul Koenig that it thought Paul Koenig was a "bull-headed Westphalian Dutchman," and added other more lurid remarks. The conversation was short, but while it lasted indicated that someone was not pleased with Mr. Koenig. Within the next few days the same voice called "P. K." again and told him several things it had forgotten to mention, all pointing to the fact that the owner of the unknown voice had been misused.

We hunted up the number from which the disgruntled calls had been made. It was a public telephone pay-station in a saloon. Crucial events can almost always be traced to some trivial circumstances — the poem “for the want of a nail the battle was lost” is an illustration of what I mean. We are not dealing here with possibilities but with facts, yet I cannot sometimes help speculating on the extent to which German atrocities might have been carried in New York and Canada, if we had not found a bartender with a good memory in that saloon. Yes, he remembered a fellow who had come in there at certain times to telephone. Yes, he came in once in a while. Didn't know his name, but thought he lived around the corner at such and such a number. At that number we found out the man's name — the bartender's description had been accurate. The name was George Fuchs.

So to George Fuchs we mailed a letter, typed on the stationery of a wireless telegraph company, suggesting that we had a position for which we believed he was the proper man, and that we would be pleased to have him call at the office of the company, at an appointed hour, to discuss the work and wages. Fuchs did not show up at the appointed hour, which disturbed the plans mo-

mentarily, but when he did arrive, he was greeted cordially by an executive of the "company" who proceeded to get acquainted with the applicant. The manner of the wireless person was so disarming, his German was so good, and his certainty that Fuchs was the man for the job so taken for granted that the two adjourned to a nearby restaurant. (Detective Corell had a very good working knowledge of German.)

"Who did you say you were working for?" Corell asked, across the crater of Fuchs's glass of beer.

"That bull-headed Westphalian Dutchman," Fuchs sputtered. "He is some relative of my mother's. She was a Prussian, though, *Gott sei dank!*"

Corell laughed at the right time, and in the conversation which ensued drew out the man's grievance against Koenig. In September Mr. and Mrs. Koenig had paid a visit to the Fuchs household in Niagara Falls, N. Y., where Fuchs lived with his mother in the Lochiel Apartments. The wonders of the Falls had received proper attention from the strangers, and Koenig showed some interest in the Welland Canal, the channel through which shipping circumnavigates the Falls. He said that the waterway was closely guarded, other-

wise he would like to go over and have a look at it, and suggested, as a convenient substitute, that Fuchs go over to Canada and take some snapshots of the locks for him.

“Why don't you go yourself?” Fuchs asked.

“They would probably pick me up if I did,” Koenig replied.

“Well, that's just why I won't take any camera over there with me,” Fuchs rejoined. “But I'll go if you want a report.”

The bargain was closed. Fuchs, Koenig said, was the very man, as he was known on the Canadian side as George Fox, was an American by birth, and would not excite suspicion. So at 7 P. M. of September 30 — slightly more than a year since Horst von der Goltz and Captain von Papen had made their first abortive attempt to destroy the Canal — “Fox” registered at the Welland House in Welland, close by the waterway. There he spent the night. The next morning he went to Port Colborne, the Lake Erie mouth of the Canal, and during the balance of the day followed its course northward, making mental notes of the shipping and the construction and guarding of the locks. By night he had reached Thorold, where he found a room, jotted down his observations, and spent the night. The next day he covered the

balance of the 27 miles to Lake Ontario, noting the number of locks, and the fact that there were two or three armed soldiers on guard at each. With his head full of good ideas for bad plans he reached Niagara Falls again that night — October 2.

Koenig was enthusiastic over his report, but when Fuchs had written it down he decided that it would be hazardous to have such a document found on his person. "Mail it to me at Post Office Box 840 in New York. Sign it just 'George'—nobody would know who that was even if they did find it." He went back to New York. Fuchs heard nothing from him for a few days, except that action had been deferred. Then the country cousin began to importune the city cousin, and Koenig suggested that he come down to New York to work for him. Which Fuchs did, and on October 8 was placed on the payroll of the "Bureau of Investigation" at eighteen dollars a week. Koenig arranged that Fuchs was to hire men who would row a boatload of dynamite across the upper Niagara River to smuggle it into Canada, and he had meanwhile arranged with two others, Richard Emil Leyendecker, his chief assistant, and Fred Metzler, his secretary, to carry out a definite

plan to sever the main artery of lake traffic by blowing it to pieces.

By Sunday, November 7, Fuchs had been occupied in several odd jobs for Koenig, such as spying on outward-bound cargoes along the waterfront, doing special guard duty at Dr. Albert's office, and going over to Hoboken to frighten a poor German agent named Franz Schulenberg, who had come on from the west to collect money from von Papen. On that Sunday he was sick and did not report for duty. He asked for his regular pay, however, and Koenig refused it, doubting that Fuchs had really been too ill to report, and holding that illness should never interfere with service to the Fatherland. This created bad blood between the two. On November 22 Koenig discharged him for "constant quarrelling with another operative, drinking, and disorderly habits," and announced that he would not be paid for his services of the previous day, when he had refused to go on duty in a river-launch. That \$2.57 due Fuchs had poisoned his soul against Koenig, and he had grown so bitter that the result we already know — evidence was at last in our hands for an arrest.

It was a case for federal prosecution, obviously,

so we called in Captain William Offley and Agent Adams, an able operative of the Department of Justice. A few hours later Koenig was placed under arrest. He resented the intrusion, and snapped to Barnitz: "Anyone who interferes with Germans or the German Government will be punished!" His house up-town was searched and that search disclosed, among other matters, an item which is unquestionably one of the richest prizes of the spy hunt in America.

It was Paul Koenig's little black memorandum book — a loose-leaf affair, scrupulously typewritten, and brought down to within a day of his arrest. A fanatic on office efficiency might have conceived it, but none but a German would have kept it posted up. For it told the story of his Bureau of Investigation with a devotion to detail almost religious.

The Hamburg-American Line probably never thought that when they assigned a shrewd ruffian named Paul Koenig to investigate an alleged case of wharfage graft in Jersey City away back in 1912 they had established a "Bureau of Investigation." But Paul Koenig knew better. He surrounded his lightest activities with an air of mystery and efficiency true to the best of amateur-detective tradition. He called his first case by a

mystic number, he conferred the ominous alias of "xxx" upon himself, hired a man named Fred Metzler as his secretary, and convinced himself that he and Metzler were a bureau. In the light of the all-absorbing importance which his bureau held for him, we are not surprised (and we must not smile), when we see chronicled neatly in his little black book that on May 13, 1913, he rented a room at 45 Broadway for "new offices," on May 24 his first private telephone was installed, on Nov. 19 a steel cabinet was purchased for the files of the department, on May 28 of 1914 the adjoining room was added to Room 82, and Room 82 was converted into a *private* office for the chief, and on July 14 a new safe was purchased and placed in the office. It may be that the assassination of the Archduke Ferdinand had something to do with that last item, for it is certain that the Hamburg-American Line knew that war was coming well in advance of the declaration. At any rate, we find that on July 31, 1914, before England and Germany had actually gone to war, and on the same day that the director of the Hamburg-American in New York received instructions from Berlin that war was coming and that he was expected to supply German naval vessels in American waters — on that day Paul

Koenig began his war duties by placing a special guard on all the piers and vessels of the Line in New York Harbor.

Up to this time the cases Koenig had handled were matters of shipping — stowaways, fires, steerage rates, charges against ships' officers. On August 22 he became a German military spy. We find it entered in his own words:

“ Aug. 22. German Government, with consent of Dr. Buenz, entrusted me with the handling of a certain investigation. Military attaché von Papen called at my office later and explained the nature of the work expected. (Beginning of Bureau's services for Imperial German Government.) ”

The “ certain investigation ” consisted in sending two men to Canada to spy on the Valcartier training camp where the first Canadian Expeditionary Force was being mobilized, and to report to the military attaché their state of readiness, in order that he might try some means of keeping them at home if it were not already too late. What von Papen had in mind was dynamiting the Welland Canal; it failed, but the case is of momentary interest to us here because it marked the beginning of a service on Koenig's part which grew very fast and extended in many and diverse directions.

The Bureau was divided into three parts, the pier division, the special detail division, and the secret service division, or "Geheimdienst." No one was allowed to forget that P. K. was head of all three. In his rules and regulations he records, among other gems, these:

"#2. In order to safeguard the secrets and affairs of the department prior to receiving a caller, hereafter my desk must be entirely cleared of all papers excepting those pertaining to the business in hand.

"#9. All persons related to me, however distant, will be barred from employment with the Bureau of Investigation. This does not apply to my wife.

"#6. It has been found detrimental to the discipline of the Office to invite direct employees of the Bureau to my residence or other place socially, or to accept their invitations, therefore this practice must cease. This ruling does not apply to agents of the Secret Service Division nor to direct employees if engaged with me on an operation which requires either social entertainment or travelling."

He had an elaborate and complicated outlay of badges, shields and photographic identification cards for each operative, for which each operative stood the expense. His meticulous attention to detail, and the diligent caution which he observed

at all times is indicated in a list of aliases which he set forth in the memorandum book. In 26 cases listed he used 26 different names — none of them his own. For example, in what he called “D-Case 250,” in dealing with an operative named “Sjurstadt” Koenig was known to Sjurstadt only as “Watson”; in D-Case 316, when he negotiated with his agent von Pilis (a propagandist who was later interned, by the way) Koenig was “Bode.” He devised a new name for himself for every new case, and sometimes used two or three names in dealing with different individuals in the same case. Naturally a man of as many identities as Koenig had to keep a record of who he was, and so his list of aliases furnished the government with an excellent catalogue of the pies in which he had his tough fingers. Each of his own employees in the Secret Service Division was known to him in three ways: by his Christian (or rather, his German) name, by a number, and by a special pair of initials. Thus Richard Emil Leyendecker, the art-woods dealer associated with him in the Welland Canal affair, was Secret Agent Number 6, known as “B. P.”; Otto Mottola, a member of the New York Police Department was Secret Agent Number 4, known as “A. S. (formerly A. M.)” The connections

SECRET SERVICE DIVISION.

SECRET SERVICE DIVISION.

SAFETY BLOCK SYSTEM

Operatives of the S. S. Division, when receiving instructions from me or through the medium of my secretary as to designating meeting places, will understand that such instructions must be translated as follows:

For week Nov.28 to Dec.4 (midnight)

A street number in Manhattan named over the telephone means that the meeting will take place 5 blocks further uptown than the street mentioned.

Pennsylvania R. R. Station means Grand Central Depot.

Kaiserhof means General Post Office, in front of P. O. Box 840.

Hotel Ansonia means Cafe in Hotel Manhattan (basement).

Hotel Belmont means at the Bar in Pabst' Columbus Circle.

Brooklyn Bridge means Bar in Unter den Linden.

For week Dec.5 to Dec.12 (midnight)

Code to remain the same as previous week.

For week Dec.12 to Dec.19 (midnight)

A street number in Manhattan named over the telephone means that the meeting will take place 5 blocks further downtown than the street mentioned.

SECRET SERVICE DIVISION.
(Geheimdienst)

Rules and Regulations.

- 1915 -

- #1. Beginning with November 6th, no blue copies are to be made of reports submitted in connection with D-Case #343, and the original reports will be sent to H.M.G. instead of the duplicates, as formerly.
- #2. In order to accomplish better results in connection with D-Case #343, and to shorten the stay of the informing agent at the place of meeting, it has been decided to discontinue the former practice of dining with this agent prior to receiving his report. It will also be made a rule to refrain from working on other matters until the informant in this case has been fully heard; and all data taken down in shorthand. (11-11-15)
- #3. Beginning with November 28th, 1915, all operations designated as D-Cases will be handled exclusively by the Secret Service Division, the Headquarters of which will not be at the Central Office, as heretofore. This change will result in discontinuing utilizing operatives or employees attached to the Central Office, Division for Special Detail and Pier Division. On the other hand, great

Random Pages from "P. K.'s Little Black Book"

of the bureaus were mentioned in his reports by numbers, the Imperial German Embassy being 5000, von Papen being 7000, Boy-Ed 8000, and Dr. Heinrich Albert, the commercial attaché of the embassy, 9000.

In the same way he disguised his meeting places. In his instructions to the Secret Service Division we find this:

“Operatives of the S. S. Division when receiving instructions from me or through the medium of my secretary as to designating meeting places will understand that such instructions must be translated as follows:

“*For week Nov. 28 to Dec. 4 (midnight).*

“A street number in Manhattan named over the telephone means that the meeting will take place 5 blocks further uptown than the street mentioned.

“Pennsylvania R. R. Station means Grand Central Depot.

“Kaiserhof means General Post Office, in front of P. O. Box 840.

“Hotel Ansonia means café in Hotel Manhattan (basement).

“Hotel Belmont means at the bar in Pabst’s Columbus Circle.

“Brooklyn Bridge means bar in Unter den Linden.”

Each week he rearranged this code, so that any-

one who thought that cutting in on a telephone call meant knowing where Koenig was bound was not likely to find him there. The man knew his German New York, and had numerous convenient meeting places where he could meet an agent and converse undisturbed, such as a German hotel at Third Avenue and 42d Street, or a German bar at Broadway and 110th Street, or a lodging house at South and Whitehall Streets, near the lower tip of the island, or a saloon connected with a Turkish bath in Harlem. He not only made it almost impossible to trace him by tapping his own wire, but his operatives were instructed to call him from pay-station telephones in locations where there was not one chance in a million of identifying the person who had called. Fuchs, of course, was the one-millionth chance, but Fuchs was no longer obeying Koenig's orders, was persistent, and careless. Altogether Koenig had built up a system of caution on paper which almost beat the game, and which enabled him to conduct a large volume of business.

The functions of his departments were clearly defined. The pier division guarded the piers and vessels of the Line, and furnished him information of sailings from the New York waterfront, which he in turn passed on to the naval attaché,

Boy-Ed. Through this division he was able to keep in touch with the waterfront element for whatever service of violence might be necessary, and to keep a fairly complete record of shipping. The special detail division was assigned to the guarding of von Bernstorff's summer place at Cedarhurst, Long Island, Dr. Albert's office in the Hamburg-American building, von Papen's office at 60 Wall Street, and the Austrian consulate in New York. This division conducted every week a test to determine whether or not Dr. Albert was being shadowed. We find entered in his notes on his operatives this:

"*H. J. Wilkens* is commended by me for good service rendered thus far as attendant on Dr. Albert. This commendation is based on a note received from the latter under date of November 12, reading as follows:

" "Dear Mr. Koenig:

" "The service rendered by your bureau's operative, H. J. Wilkens, have proven entirely satisfactory.

" "Yours truly,

" " (Signed) H. T. ALBERT. "

Apparently Koenig's performance of his duty to the German cause encouraged the high officials of the German government in the United States to rely upon him, for these posts were gradually

placed under his direction during the summer of 1915, the Embassy at Cedarhurst on July 3, Dr. Albert's office on Sept. 1, von Papen's office on Oct. 26, and the Austrian Consulate on December 15 — three days previous to Koenig's arrest, and less than a week after Captain von Papen, who was returning to his own country by the request of our country, had called P. K. to the German Club to "express his thanks for the services this Bureau have rendered to him." "At the same time," the little notebook confides, "he bid me Good-Bye." We find these functions mentioned with a suggestion of reverence.

But the autobiography of Paul Koenig resumes its dark shroud of mystery when it turns to the functions of the division of secret service. There he is the dominating figure, a sort of cross between a Dr. Moriarity and a gorilla, a slippery conniver one minute and a pugnacious bully the next, convicted by his own complimentary reports. It was in handling the "D-cases" already mentioned that he employed his many false names, his secret numbers, his elusive places of appointment, and his essentially Teutonic discipline. The nature of the work of this division may best be suggested by citing a case which appears rather often in his records — Case D-343.

are to be known as Central Office men, and do not come under the jurisdiction of the Pier Division. (11-23-15)

- #12. Beginning with today, specific plans have been decided upon as to the best manner in which to keep newspapers and clippings dealing with the war and political subjects. Clippings that refer to D-Cases of this Bureau will continue to be placed in the private files, together with their respective reports. An exception to this particular rule may be made in the event that there are too many clippings at hand, in which case they may be bound together and kept separate, as is being done in the case of operation D-#332. Other clippings are to be mounted on cardboard, and the name of the newspaper and date typewritten thereon. Articles of interest that cover an entire page or more will not be clipped, but will be kept whole in a temporary folder in view of binding same later. This, also applies to copies which deal with matters on which reports have been rendered. (12-7-15)

may not be in my interest. The stenographer of the Central Office, however, will continue to write out checks as heretofore, but the check-book itself, will always be kept under lock and key. (11-23-15)

- #11. Operatives of the Pier Division in future will carry as their means of identification only the Bureau's identification card, on the reverse side of which a photograph of the bearer will be pasted, with my signature written above and below the photo. The front side of the card will also bear my signature. These men will not carry any more shields, as in the past. Any changes in the personnel of the Pier Division, such as attachments and detachments, will be brought to the attention of the Marine Superintendent or other Superintendent at whose piers they are stationed. There will be special operatives selected to check up operatives of the Pier Division and employees of the piers, who will not be named to anyone in advance, but who will, at intervals, make their inspections, carrying with them as their means of identification, a commission consisting of a letter on Company's stationery, setting forth their authority, which will be duly signed by me and countersigned by one of the Company's Vice Directors. These special operatives

Random Pages from "P. K.'s Little Black Book"

covering G.G. Station #3 on Sunday, November 21st, from 10 A.M. until 5 P. M. Contrary to the list of assignments for the Pier Division he did not do guard duty at the Hoboken Piers during the night of November 20th to 21st. In order to be at his new post, G.G. Station #3, he was given this night off with pay, to be charged to Case #242. Wages while on duty at G.G. Station #3 will be the same as heretofore.

H. v. Staden on November 22d, at 10 A. M., reported to Central Office duty as instructed. He will work jointly with Opt. W.H.M., his salary to remain unchanged.

H. Pearsall, on Saturday, November 20th upon being instructed by Opt. H.J.W. that he was to be assigned to the Pier Division, declared that he refused to accept this post, and tendered his resignation. According to a written report submitted by Opt. H.J.W., H. P. acted insolently, and belittled this Bureau's service. As H. P. did not tender his resignation to me personally or by mail, I did not take cognizance of what he told Opt. H.J.W. regarding leaving the department, but discharged him at once upon hearing of his conduct. His services ended on November 21st at 10 A.M. While he has been an alert watchman, he has often proven to be a cranky, quarrelsome employee, who was the cause of a great deal of trouble while on the piers.

I congratulate myself on having ridden this Bureau of an ignorant, stubborn and hot-headed man of the caliber of Pearsall, whose last words to stenographer F. Metzler were that he would not trust me for a dollar. While it is understood that this former employee is disbarred from reinstatement, he will never be given any sort of a recommendation, nor will I receive him. He is to be kept out of the office entirely.

George Fuchs was dismissed from the Bureau's services on November 22d at 4.30 P.M. The reason for his discharge is general conduct displayed on Company's piers, constant quarreling with another operative, drinking and disorderly habits. He will receive no pay for the night of November 21st to 22d, during which he refused to join Opt. J.P.C. in his duties on Company's Launch #4.

William McCulley, on November 16th at 3 A.M., was appointed Chief of the Secret Service Division, his duties to commence on Sunday, November 28th, at 9 A.M. Salary \$28. per week. Upon his word he promised to remain in this capacity for at least six months and to be at my disposal at all hours. He is to take a residence in New York City, and will be known as "William MacIntyre" at the Headquarters of the Secret Service Division to be established on December 1st, 1915.

A.E. Leyendecker, on November 23d, at 11 P.M., was appointed Assistant to the

Rule number 1 of the division stated:

“Beginning with Nov. 6 (1915) no blue copies are to be made of reports submitted in connection with D-Case 343, and the original reports will be sent to H. M. G. instead of the duplicates, as formerly.”

“H. M. G.” we learned from the key to special personages for whom the division was conducting investigations, was von Papen himself. Rule 2 reads:

“In order to accomplish better results in connection with D-Case 343, and to shorten the stay of the informing agent at the place of meeting, it has been decided to discontinue the former practice of dining with this agent prior to receiving his report. It will also be a rule to refrain from working on other matters until the informant in this case has been fully heard, and all data taken down in shorthand.”

The book revealed that in D-Case 343 Koenig's alias was Woehler, and his agent's name Schleindl. In his notes on operatives Koenig had written that “Friedrich Schleindl . . . who was first known as Operative #51, and later as Agent C. O., beginning with October 21st will be called Agent B. I.” This enabled us to interpret a further regulation of the division, to this effect.

“ Agent B. I. has been requested not to call again at the Central Office, this ruling to take effect immediately. Other arrangements will be made to meet him elsewhere. Whether or not the stenographer of the Central Office will continue to write reports covering D-Case 343 will be determined later.”

Rule 4 read:

“ Supplementing Rule 2, it has been decided that I refrain from drinking beer or liquor with my supper prior to receiving Agent B. I., for the reason that I wish to be perfectly fresh and well prepared to receive his reports.”

And Rule 3 contained this passage:

“ . . . great care is to be taken that operatives and agents of the Secret Service Division remain entirely unknown to members of the Central Office and other divisions. These regulations do not apply to D-Case 343, which has been handled since the beginning of July (1915) with the knowledge of employees not belonging to the Secret Service Division. Until more favorable arrangements can be made this practice may be continued.”

Here clearly was an unusually important case. The notes indicated that Koenig was receiving frequent reports of great value from this Schleindl,

had been receiving them for at least five months, was reporting them to von Papen, and intended to safeguard his obtaining further information. When a German voluntarily forswears his beer, something serious is on foot.

Lieut. Barnitz, with Detectives Walsh and Fennelly, arrested Schleindl the same day we closed in on Koenig. In his pocket was a cablegram referring to Russian munitions. He was a German reservist, born in Bavaria. At the outbreak of war he was a clerk in the National City Bank of New York, and lived away up in the Bronx, and in the first reaction to war he reported at the German Consulate for duty. Months passed, and he had not been called upon, when one night he met a German who told him to report at the Hotel Manhattan to meet another German named Wagoner. "You'll find him in the bar," added his informant.

"Wagoner," who was Paul Koenig himself, met the youth, and playing on his patriotism drew from him the information that he had access to many cablegrams to and from the Allied governments through the bank concerning the purchase and shipment of war supplies. Offering Schleindl a retainer of \$25 a week, Koenig told him to steal from the files all such messages he could lay his

hands on, together with copies of express-bills showing when the goods were delivered to the piers for shipment, all data relating to the prices paid, detailed descriptions of the purchases, and any other particulars which would help the German Government to complete its knowledge of what supplies America was shipping abroad. Schleindl grew quite enthusiastic in the work. Starting with light thefts, he gradually grew bolder, until he was in a position to steal documents night after night, take them to his appointment with Koenig, have them copied, and arrive at the Bank early enough the following morning to put them back where they belonged. Friday night was the regular appointment, but often messages of big shipments came in and he relayed the news at once to his chief. The extra \$25 a week practically doubled his earning power, and made devotion to the Fatherland very attractive — so much so that he began to be afraid that Koenig, who was merely the receiving station for his reports, and who took no risks himself, would receive more than his share of credit. If there were any iron crosses to be given out, or any ribbons for foreign service, Schleindl felt that he had earned his, so he forwarded to his brother in Austria from time to time stenographic

Alexander Dietrichens

International Film Service, Inc.

Frederick Schleindl

Schleindl and Dietrichens at a German party

notes written in the Bavarian dialect which would be especially difficult of translation. In order to evade the censor he tore them into scraps and sifted them into the folds of newspapers which went unmolested through the British mail censors at Kirkwall. These scraps, pieced together and translated into reports, were forwarded by his brother to German officials.

Schleindl's zeal had led him into other channels of German activity. At college in Germany he had had a friend named Alexander Dietrichens, later known variously as Willish, Sander, Glass, and Lizius — one of those Riga Russians of German parentage who have served Bolshevism so eminently in Russia. In 1915 Dietrichens was in America, and the two renewed their friendship. He said he was eager to serve the Fatherland, and that he only wanted to know who was supplying munitions to the Allies to start a campaign of destruction against them. He suggested the Du Pont factories at Wilmington, and asked the young bank clerk to come along. Schleindl, impressionable and emotional, had not the courage. He confessed to me that he wept at the thought, and that he asked Dietrichens whether any harm could come to him if the explosion killed anyone. "Very likely," Dietrichens answered cheerfully.

Schleindl then declined, but he helped the dynamiter to the extent of keeping an occasional bomb or a package of dynamite for him during the day in his locker or under his desk at the bank. The main cache where Dietrichens stored his explosives was near Tenafly, New Jersey, but when Schleindl and I visited it, in a deserted spot almost a mile from the nearest building, the shanty was empty.

Schleindl was tried, convicted and sentenced to an indeterminate term in the penitentiary, for the theft of documents. Koenig pleaded guilty to the charge, but sentence was suspended on him owing to the greater importance of the Welland charges.

The Schleindl and Dietrichens cases are only two examples of many to which the little black book gave clues. It suggested investigations into many others, for it was a real storehouse of names, and knowing Koenig's close relationship with the highest German authorities in the United States, it contributed a large number of items to the bill of complaint against Germany which provoked the President's Flag Day warning of 1916. Koenig's mere mention of the name of "Horn" in D-Case 277 gave evidence of the German sponsorship of the attempt of Werner Horn to blow up the Vanceboro bridge in February, 1915; the

name "Stahl" in D-Case 328 indicated by Koenig's own hand that it was he who paid Gustave Stahl for the false affidavits that the *Lusitania* had carried guns; the name "Kienzle" in D-Case 316 was the name of a man who was involved in trying to blow up vessels sailing for France and England; the name "Hammond" in D-Case 357 led to the disclosure that the Bureau of Investigation, although chiefly engaged in spying and destroying plots, sometimes ran other and more delicate errands for von Bernstorff.

Posing this time as "W. H. Becker" Koenig called on one J. C. Hammond, a writer and publicity man who had offices at 34th Street and Broadway. To Hammond he stated that from the standpoint of the Germans in America two newspapers were taking irritating and unfriendly attitudes. These were the *New York World* and the *Providence Journal*. Both papers had taken, soon after the outbreak of war, definite stands on the American issues involved, and both pursued the subject in a typically thorough fashion, the Providence paper obtaining much of its information from sympathetic British sources, and the *World* having an influential position politically which led it across the trail of what the newspaper men call "big stories." The *Providence*

Journal in fact emerged from comparative obscurity during the early months of war with startling charges against German agents both here and abroad, supported by evidence which seemed incredible though of sound origin. These stories were republished widely through the country. It was undoubtedly having a powerful effect upon the public, for the country, dazed with the fact of war, was ready to take sides against the nation which was apparently guilty of the worst acts. Some of those charges were true, and although they seemed at that time so fantastic as to be almost impossible, the members of the German Embassy knew they were true and squirmed inwardly every time a fresh one burst out. The *World* had a habit of not only spreading exciting news articles over its front page, but lending color to them by publishing photographs of supporting documents to prove their authenticity. So von Bernstorff and the attachés, after having tried to bring influence to bear in many subtle ways to curb the publications, called in Koenig, and he made his little pilgrimage to Hammond's office.

He offered the publicity agent a large sum of money to find out what exposures the two papers had still in the ice-box, ready to release. Later, he increased this to a blanket offer of any sum

which Hammond should name, provided the latter could induce the papers to turn over to him the articles and affidavits in their possession. The offer was not accepted. Hammond did not bite at the offer of a later reward of \$100,000 which Koenig hung up to silence the publication of anti-German news in certain other large newspapers in the country, nor did he, as Koenig requested, go to England to visit Rintelen, to find out where Rintelen had left a trunk full of valuable papers when he fled the United States.

The name "Lewis" mentioned in the citation of another case in the little black book revealed a further variation of the services of the Secret Service Division. The United States owned a large quantity of Krag-Joergensen rifles for which in that year of peace it had no use, but which several foreign governments would have been glad to buy. Commercial bachelors who were looking for war brides all took turns paying court to the rifles, and all without success. Readers of the newspapers may recall a small tempest which raged around the alleged sale of the rifles, and the charges levelled at one after another German of the attempt to purchase. Each new charge was denied by its victim, and it finally developed that a Mrs. Selma Lewis had been involved in the nego-

tiations, and was willing to pose as the purchaser. The "man behind" was Franz Rintelen, acting for the German Government, and the name "Lewis" here in Koenig's notes, amplified by the full name and address of Mrs. Lewis in a small address book which we also captured, indicates that Koenig worked for Rintelen as well as the abler and more authentic members of the embassy of destruction which Germany kept in America.

I think I have made it clear that when the United States interned Paul Koenig it made prisoner one of the busiest men of the German spy system, and one of the strangest. He was physically powerful and mentally quick with a German sort of quickness. He had the most supreme self-confidence it has been my pleasure to meet, and that caused his downfall. If he had administered his bureau in a manner calculated to breed loyalty in his employees he would have been more successful, but he conceived his work as a one-man job, and made his subordinates goose-step to his tune. It is certain that had he not set down with such care every item which would be useful to the United States in unearthing his actions, no one can say how long they would have continued. Napoleon had his Waterloo, how-

ever, and Paul Koenig had his notebook, and with the same scrupulous foresight the indomitable "xxx" left that notebook where we would be most likely to find it.

It is a rare treat, aside from its now past informative value. And it contains one real mystery which the Westphalian himself can alone clear up. The page headed "Health Rules" reads as follows:

" #1. I have decided to refrain from chewing tobacco in the office as it disagrees with my health thereby interfering with my work. (12-1-15.)

" #2. I shall drink no more whiskey. (12-6.)"

Which leads one to believe that he saw the practical value of an exemplary life. But we must wait for him to explain the page headed "Health Table," which reads:

" XI

" 9-12-14-17-17-21-23-24-28-28

" XII

" 1-3-5-8-9-11-13-16."

The " XI " is evidently November, of 1915, the " XII " December. What did he do on those dates so accurately mentioned? Did temptation lead him twice from the path on the 17th and

28th of November? If so, what could this temptation have been? Is it possible that the same conscience which made him typewrite his rules of conduct weakened, and then remorse turned about and forced him to set down his lapses from grace? Is it further possible that each of the dates cited means that Paul Koenig broke his brand new health rules ten times in November and eight times in December, and *chewed tobacco in office hours?*

We must wait in patience — some day his Westphalian conscience may answer.

III

PLAYING WITH FIRE

The business of crime prevention and detection depends largely on the confidence one man has in another. That is one reason why a "stool-pigeon" is an uncomfortable ally on a case. You can not be sure that a man who associates with criminals and is giving them away is not giving the case away at the same time. His gang hates him for squealing, his evidence is the evidence of a traitor, and he is a good person not to depend on. I make that point here because I have always tried to avoid using stool-pigeons, and because the story to follow will illustrate what can be accomplished by a dependable man.

The story really starts about twenty years ago. In the spring of 1900, an Italian from Paterson, N. J., Brescia by name, attended a meeting of anarchists in a house in Elizabeth Street, New York. The group was composed of two parties, one which we may call the progressives, and one

the inactives. Brescia assailed the inactives, denounced them as cowards, and stirred up so much dissension that the meeting broke up for fear of a police raid, and several of the members retaliated at Brescia by accusing him of being a police spy. He sailed for Italy, and on July 29, in the little Lombardi town of Monza, murdered King Humbert the Good. When the news was cabled to America it was hailed with proper grief by the public and with great joy by the anarchists who had called Brescia a traitor. His execution, which followed swiftly, made him a martyr. So to do him honor, the group was named the Brescia Circle.

By 1914 the membership of the circle was nearly 600. A cosmopolitan lot: Italians, Russians, Russian Jews, Germans, Austrians, Spaniards and Americans, of both sexes. The leaders were agitators whose speaking ability had lifted them out of the ranks and who found an easier living by their wits than by their hands. The Bomb Squad knew something of their activities and habits, for the past history of anarchist cases linked up certain names in a pointed way. We knew their fondness for bombs, and the records of the police department contain many instances of anarchists inspired to violence by the

inflammatory speeches of such agitators, as their idol, Francisco Ferrer, had preached violence in Spain. The outbreak of war in Europe, from which so many of the group had migrated to America, and the promise of social confusion which it held for them had stirred the Brescia Circle more than a little. The active members met regularly in the basement of a building at 301 East 106th Street, a shabby house in a shabby district east of the New York Central tracks. These meetings, which occurred usually on a Sunday, as many of the members were working during the week, were addressed by such notorious anarchists as Emma Goldman, Becky Edelson, Frank Mandese, Carlo Tresca and Pietro Allegra — names probably unfamiliar to the general public, but names with which the Police Department had "auld acquaintance." Occasionally an editor of an anarchist newspaper in Lynn, Massachusetts, Gagliani by name, came to speak in the cellar, and Plunkett, Harry Kelly, and Alexander Berkman were usually to be found in the group.

The winter of 1913-1914 was one of industrial depression. Many of the radical labor element rallied to the I. W. W. and the unemployed readily joined them. The methods of the anarchists and I. W. W.'s were similar, and the advo-

cates of unrest were enlisted under both standards. In the late winter demonstrations began and multiplied until in March a youth named Frank Tannenbaum, to whom Emma Goldman later took a fancy, led a mob of I. W. W.'s into St. Alphonsus' Church demanding food. The police waited until they had passed inside, then locked the doors, and arrested the whole lot. This was but one instance of a number which promised more trouble. Whatever nice distinctions of creed separated the Industrial Workers from the anarchists were paper distinctions; the performances of both bodies made it fairly plain that if you scratched an anarchist you found an I. W. W. underneath.

There may have been some intimation from abroad of the impending war, among the anarchists, for in July certain of them began to grow demonstrative. On Independence Day Mandese was arrested in Tarrytown, in uncomfortable proximity to the estate and person of John D. Rockefeller. Carron, Berg and Hansen, three members of the Brescia Circle, were engaged on that same day in perfecting a bomb in their rooms at Lexington Avenue and 104th Street, when the machine exploded prematurely and killed them. That bomb had been intended for the Rockefeller

family. Naturally everyone with a shred of respect for order who read of these episodes recoiled from them, but it was necessary to judge them from the anarchist's own standpoint to see that while one of the cases had resulted in death, and the Mandese incident in arrest, both had been successful in creating a disturbance. The anarchist likes disturbance as well as he dislikes order, for unrest is contagious, and means new recruits to the cause. It became our duty, therefore, to make a careful investigation of these disturbances at their source, and we insinuated a detective into the Brescia Circle itself.

He spoke only English — a good language for social intercourse, but not the key to the affairs of the group in the 106th Street basement. Whenever the more prominent agitators had a really important matter to discuss they used the Italian tongue, and it was impossible for our man to eavesdrop. Perhaps he was over-eager, for twice he was brought to trial by the Circle charged with spying. Twice he was acquitted. But when his enemies had him formally charged a third time with treachery, the anarchists decided that although they had no evidence against him beyond a powerful suspicion, he would be better outside. Outside he went.

On October 3, the anarchists gave a grand ball at the Harlem Casino in honor of Emma Goldman, and at that affair announcement was made that October 13 would be observed by those of the cause with a celebration at Forward Hall, in East Broadway, fitting to the anniversary of the "assassination" of Francisco Ferrer. The orator, Leonard Abbott, also reminded the gathering that "the Catholic Church had been responsible for Ferrer's death." At five o'clock in the afternoon of October 12 a vicious explosion occurred in the north aisle of St. Patrick's Cathedral. It was an anarchist's bomb. The nave of the church held numerous worshippers, who were panic-stricken, but who fortunately escaped injury with the exception of a young man struck in the face by a flying splinter from one of the altars. Shortly after midnight of the next day a bomb placed in the front area of the priests' house of St. Alphonse's exploded with violence enough to break every window in the house and every window in the house across the street. Ferrer's "assassination" had evidently been appropriately observed.

The situation was disturbing. We had to put a stop to bombing before the anarchists grew bolder and began to kill someone beside themselves. Of course we wanted all the evidence we

could lay hands on, and yet the evidence we had been able to obtain had not prevented two outrages. We felt that undoubtedly the best place to look for it was still the Brescia Circle, as it constituted the chief organization and headquarters for the element which we believed guilty. And we now return to the question of the stool-pigeon.

It would have been possible to employ one of the Circle, perhaps. It is certain that I should have been uneasy with only his evidence to depend upon, for a bomb does not wait to be investigated. Planting a man in the Brescia Circle had not been successful, but I felt that it could be made successful. So out of five or six candidates from the department I chose Amedeo Polignani for the work.

He was a young Italian detective who kept his own counsel, short, strong, mild-mannered and unobtrusive. And he knew Italian. "Your name from now on is Frank Baldo," I said. "Forget you're a detective. You can get a job over in Long Island City, so as to carry out the bluff. You are an anarchist. Join the Brescia Circle and any other affiliated group, and report to me every day. The older members may be suspicious of you, and they'll probably follow you, so we had

better arrange when you are to telephone and I'll let you know whenever and wherever I want to see you." We discussed every possible angle of the work in order to anticipate and forestall whatever accident either of omission or commission might occur to make Polignani's position suspicious. He was instructed to call me by telephone at certain hours, using a private number, telephoning from a public pay-station in a store in which there was not more than one booth, so that no one might follow him and hear his conversation through the flimsy walls of a booth adjoining. He was to deport himself in a retiring manner, and to throw himself earnestly into the part he was to act. I felt sure that his quiet, agreeable nature would disarm any suspicion of him as a newcomer, and that complete concentration upon the spirit of the masquerade would gradually draw out important information. First and foremost, he was to be on the watch for evidence of the man who had committed the two bomb outrages in October; secondly, he was to cover the activities and intentions of the anarchists in general; thirdly, he was to keep his eyes and ears open and his mouth shut, and to deal with any emergency which might arise.

It often happens in fiction that a man journeys

Copyright, by International News Service

Carmine and Carbone in Court

to a far country and somewhere on the voyage sheds his identity like an old suit of clothes to proceed through years of adventure as another individual; in the movies it is no feat at all for a girl to disguise herself as a man and hoodwink the rest of the actors through several hundred feet of film; but it remained for a New York detective to discard his name and his associations for six months, and without once stirring outside his jurisdiction, without any disguise, and without miraculous power, to add to the records — and consequently to the efficiency — of his department a store of information of one of the most troublesome groups of anarchists in the United States.

He bade his little family in the Bronx good-bye, got employment at manual labor in a Long Island City factory, and hired a cheap room at 1907 Third Avenue. Throughout November he attended meetings of the Brescia Circle, listening to bitter speeches full of wild plans to overthrow the government, and the organized church, and getting the lay of the land. To such members as chose to speak to him he was courteous and friendly, but they were not many. The more important members had a way of gathering in corners and whispering to each other, and the new

member was not invited to join the charmed inner circle. So he held his peace, and memorized names and faces, and presently his opportunity came.

Polignani had noticed on November 30 a young Italian cobbler, named Carbone, who seemed to have influence in the Circle, and he confirmed this judgment on the next two Sunday evenings as he saw Carbone in whispered conversation with Frank Mandese and one Campanielli. The next Sunday night the same trio was in star-chamber session when a good-natured wrestling match started in another part of the room, and Carbone turned to watch it. Polignani was tossing various members to the floor, and as he was smoothing his ruffled hair after a short bout, Carbone tapped him on the shoulder and said, "You're a strong fellow — I'm glad to see you a member of the Brescia Circle!" The detective smiled, and the two fell into conversation, which continued as they left the society's rooms and strolled up Third Avenue.

"The trouble with those fellows," said Carbone, "is that they talk too much and don't act enough. They don't accomplish anything."

"That's right," Polignani agreed.

"What they ought to do is throw a few bombs

and show the police something," Carbone continued. "Wake them up! Look —" he held up the stumps of five fingers of his right hand — "I got that making a bomb. Some day I'll show you how to make 'em."

That arrangement suited Polignani perfectly. He had a lead, after tedious "watchful waiting," which had been punctuated by the explosion of a mysterious bomb at the door of the Bronx County Court House on November 11. He had listened to reams of oratory against the ruling classes, law, order and the churches, had heard his fellow members chided because the bombs at St. Patrick's and St. Alphonsus' had been too weak, and had heard speakers advise any members who contemplated the use of dynamite not to take too many people into their confidences. Carbone was deliberately confiding in "Baldo," and the detective made up his mind to cultivate him.

This extract from his notebook will illustrate how the acquaintance ripened:

"I did not see Carbone again until Sunday the 27th. On this day he spoke to me of a friend named Frank and said that if all anarchists were like his friend they would be all right. He thinks nothing of making and throwing a bomb. On January 1st about 1.45 P.M. Carbone met me as per appointment. We went to where the

meeting of the unemployed was being held and both of us shook hands with Louise Berg, Mandese, and Bianco. . . . He introduced me to his friend Frank. . . .”

Enter the third conspirator, Frank Abarno, 25 years old, and a native of San Velle, Italy. Almost on the heels of his introduction to the promising new member, the new member began to take a new interest in life, for on January 3 Carbone drew Polignani out of the meeting after the speeches and said quietly, “Come on up to the 125th Street Station. It’s warm up there, and we won’t be bothered. I’ll tell you something about making bombs.” And on the way up Lexington Avenue Carbone explained that he needed some caps about two inches long. All the dynamite he wanted he could get from his uncle, a contractor “out in the country.” “We’ll get some dynamite, and then you and Frank and me will blow up some churches, see?”

“Sure,” the detective answered. “What church?”

“St. Patrick’s is the best. This time it’ll be a good one too — not like before.”

“Did you hear what Mandese was saying the other night?” Polignani asked. “He was scrapping with another fellow and the fellow says, ‘If

they wouldn't give me no work I'd throw bombs.' And Mandese said to him, 'The only kind of bombs you shoot are the kind you shoot with your mouth,' and he says, 'What kind of bombs do you shoot then?' And Mandese says, 'The kind that went off at Madison Square and the two churches, see!'"

Carbone apparently did not care for the results of the previous explosions, for he said:

"Well, they were no good. That bomb that killed Carron and Berg and Hansen wasn't made right. It was wound too tight — that's why it went off too soon. I can make a bomb from a brass ball off a bed-post that will start something."

A fortnight passed, and Carbone turned up at the Brescia meeting-place in company with Abarno. They beckoned to Polignani and the three walked down Third Avenue, Abarno mouthing anarchy, and suddenly suggesting that he would like to go into St. Patrick's, find Cardinal Farley alone, and choke him to death. The gentle soul then remarked: "Carbone, you make some bombs!"

"If I can get those caps I'll make a bomb that will destroy the Cathedral clear down to the ground, but if I can't get the caps then I'll have to make the other kind."

“ Well, you make two bombs,” said Abarno. “ We’ll set them off on the outside of the church about six o’clock some morning and then we can get away clean and get to work on time and nobody will know the difference.”

Carbone asked Abarno to get him some sulphur, and turned to Polignani a slip pencilled, “ Col-
lorate di Potase, 1 lb.” and “ Andimonio.” “ You get that at a drug store, Baldo,” he said.

“ Baldo ” complied, and a few weeks later the materials were assembled. Carbone instructed Polignani to call on Abarno for a booklet on bomb manufacture, and about six in the evening of February 4 Abarno gave the detective the pamphlet to read while he went out to get some spaghetti, as the two had an appointment with Carbone at 7.30. Polignani was hardly out of Abarno’s sight when he sprinted to a telephone and called me. I met him at once, at headquarters, and turned the booklet over to the photographer, who got to work immediately photographing the pages. Our time was short, and before we had the job done I had to restore the book to Polignani. On Lincoln’s Birthday Carbone gave the book to our man again, to study, and this gave us time to finish the photographic copying.

TOTALE L. 46.—

Raccomandiamo a coloro che si vogliono mettere a questi lavori, di procurarsi prima di tutto il denaro necessario; altrimenti arrischiando di doversi fermare a mezza strada, di tirar le cose in lungo ed esporsi inutilmente.

Raccomandiamo agli stessi di non trascurare nessuna delle precauzioni necessarie per non attirare l'attenzione della polizia, di non mettersi in vista colla propaganda pubblica, di non farsi vedere coi compagni conosciuti, e di non lavorare mai nelle case soggette ad essere perquisite.

Soprattutto raccomandiamo non mettersi a fabbricare esplosivi per il gusto di fabbricarli. Tutto ciò che si può avere bello e fatto, è inutile, è stupido il volerlo fare da sé, quando non si ha la pratica ed i mezzi che hanno quelli del mestiere. Nei posti in cui si può avere la dinamite—e oggi la si può avere quasi dappertutto—perchè mettersi a fabbricarla?

Bisogna poi che fra i diversi esplosivi, le diverse bombe, ecc., ognuno scelga le cose che per lui sono più facili e più pratiche ricordandosi sempre che: **E' meglio una cosa piccola fatta, che una grande restata in proposito.**

stessa: si legano bene con fil di ferro intorno alla rotaia, si mette capsula e miccia, si copre con terra e la mina è pronta. Questa produce una rottura di mezzo metro. Per avere rotture più estese non v'è che preparare parecchie di queste mine, a debita distanza e munirle di miccie di eguali qualità e lunghezza; e raccogliere insieme i capi delle miccie, in modo che dando fuoco alle miccie lo scoppio è contemporaneo in tutti i punti. Spesso è vantaggioso per far saltare gli SCAMBI, cioè i punti dove s'incrociano diverse linee. Per mettere fuori d'uso una locomotiva o una macchina a vapore qualsiasi, basta far scoppiare 3 o 4 petardi in un tubo interno della caldaia.

BOMBE

Sono recipienti di metallo pieni di materia esplosiva, che scoppiando si rompono in pezzi e feriscono i circostanti. Possono avere qualunque forma, ma la sferica è più efficace. Per farle scoppiare si può adoperare una capsula con miccia che brucia rapidissimamente tanto da aver giusto il tempo per accenderle e lanciarle. Si può anche applicarvi tutto a l'intorno dei luminelli con capsule o altri apparati, in modo che per l'urto della caduta il fulminato scoppi e faccia scoppiare la carica della bomba, come in quelle all'Orsini.

La bomba fa tanto più effetto quanto più il metallo è resistente, sempre che la carica abbia la forza di farla scoppiare. Quindi il miglior metallo è il ferro o l'acciaio, poi il rame, l'ottone, il bronzo, quindi la ghisa ed infine lo zinco solo o legato con stagno; il piombo non serve. LO SPESSORE DELLE PA-

I realized when I saw the translation how Carbone knew so much about making bombs.

“La Salute e' in voi!” read the cover, or “Health is in you!” Evidently a toast to the brotherhood for which it was prepared. It was a pamphlet of some sixty pages, measuring about four by eight inches, and cleanly printed in Italian. It was nothing less than a text-book on how to go about making bombs — a sort of guide to anarchist etiquette. It would be unwise to reproduce its instructions here in detail, as they were too accurate for the general peace, but the index which follows will give a conception of the thoroughness with which the anonymous writers in far-off Italy covered their subject.

“ Index —

First principles	I
Instruments	7
Manipulation	8
Explosive material	II
Powder	14
Nitroglycerine	14
Dynamite	20
Fulminate of mercury	23
Gun cotton	27
Preparation of fuses	31
Capsule and petard	34
Application of explosive materials	35

Bombs	39
Incendiary materials	44 ”

Yes, it was accurate — and very practical. To quote from its advice to struggling anarchists:

“ We recommend most earnestly that if you wish to engage in this line of work, you procure, before all else, a sufficient amount of money, otherwise you risk being put out in the middle of the street, only to find your long work and trouble all in vain. We recommend at the same time that you do not omit any precaution necessary to avoid attracting the attention of the police, and avoid mixing with the public, nor be seen with known companions. And do not work at it in the house except when necessary. . . .

“ The work should be done in a well ventilated room provided with a good chimney place and furnished in such a way that you can hide things if anyone enters, and this room ought to be on the top floor of the house on account of the odors that are always being produced. . . .

“ Above all we recommend that you never make explosives for the mere pleasure of making them. All you do beyond enough is useless and stupid — especially so when you have neither the practice nor the proper means for making them. As to the place to keep the dynamite, why make it until it is needed? Take heed that among the various kinds of explosives, bombs, etc., always choose the one that will be most easily used and

most practical, remembering always that it is better to do a little thing well than to leave a big thing half done. . . .”

The little booklet contained a list of the necessary tools with their estimated costs, and said of the chemicals to be used, “The materials to be employed should be sufficiently pure. They may be had of dealers in chemical and pharmaceutical products, and it is well not to buy all the stuff from the same merchant, in order that he may not know what you wish to make. . . .” It explained the relative forces of explosives in this way: “The relative force which the various explosives have is as follows: Shot-gun powder has a force of 1; an equal amount of ‘Panclastite’ has the force of 6; of dynamite 7; of dry gun-cotton 9 (if with 50% of salts of nitre, 5); of nitroglycerine 9; of fulminate of mercury 10 or $3\frac{1}{2}$; of nitromannite 11. . . . All the other explosives of which we speak, such as melenite, etc., have nitroglycerine for their bases, therefore have no greater force than that of nitroglycerine.”

After an exposition of the method of making nitroglycerine — the mere reading of which would make your hair bristle — the compilers conclude “. . . it is not very dangerous to use when cold, notwithstanding all that has been said. It would

be a great work if some American manufacturer would devise some means of congealing it so that it would be less sensitive to shock, so that it might safely be carried on the railways." Of fulminating cotton they remark, "As it ignites with instantaneous rapidity it is best to use a fuse that burns the most quickly; for example, when for use in bombs made to throw at a person, it will be enough to twist the cord, etc., etc." Minute directions are given for the home-laboratory manufacture of the explosives listed, and the experimenter who cared to attempt their manufacture was warned in the simplest and most emphatic terms of the caprices of the different materials. He was told how to make cord-fuses that would burn at the rate of 8 hours to the yard, and of 6 hours to the yard; paper fuses which would reach the explosive two hours after a spark had touched the corner of a sheet of prepared paper; thread fuses which would sparkle fifteen seconds to the metre, or three minutes to the metre; and, finally, an instantaneous fuse which "Because it will burn with all the speed of electricity . . . may be made to serve many important purposes: to fire a mine under a passing train, under gatherings, or troops of cavalry."

If the bomber wished to blow up a wall, he

was told how to compute by simple mathematics the quantity of explosive required. A bridge "will require twice the charge needed for a wall" — and the vulnerable points of the bridge were indicated. Telephone and telegraph poles and wires, street gratings, street railways, locomotives, steam-boilers, all came in for their share of attention. "It is very easy to find suitable receptacles for bombs," the writer went on. "For example, large inkwells, brass handles such as are used on letter-presses. . . . For certain purposes a bottle may be made to serve as a bomb — they are suitable for throwing from a window. . . . Fragile glass bottles when filled with this solution (an incendiary mixture) make handy incendiary bombs to hurl among troops, official gatherings, etc.; also to pour from windows upon troops, or to throw from a drinking glass or pail. . . ." I have wondered whether Gavrio Prinzip of Sarajevo ever saw this book, and whether it may not have been translated into Italian from the original German.

Mere possession of this wicked treatise would suggest that the owner was up to no good, especially if the owner, as in this case, was known to be a volatile member of an anarchistic circle who had already declared his intentions of wrecking

something. It was reasonable to assume that there must be such a book of instruction in existence, that the bombers had not been handling delicate explosives with no better knowledge than word-of-mouth, hearsay chemistry, but I am free to confess that my first sight of the pamphlet brought the plots of the men we were watching very close to grim reality. I never knew just when we would get an ambulance call and have to go and pick Polignani out of the wreck of a premature explosion, and I never heard him report in on the telephone that I didn't experience a momentary apprehension of his latest news. The detective himself was calm enough, and enthusiastic over the fact that the trail was growing hotter all the time. The question of evidence of the previous explosions was in the background now, and the activities of the Brescia Circle as a political unit did not concern us nearly as much as the activities of three of its members with their "andimonio, collorate di potase" and their pamphlet, and their hatred of the Catholic Church.

Polignani had seen this hatred demonstrated many times by Carbone. They passed two Sisters of Charity one chilly evening near the Harlem station, and the anarchist spat, and cursed them.

So the detective was not surprised by Abarno's proposal on the night of St. Valentine's Day that the three conspirators plant their bombs in St. Patrick's Cathedral. "We'll go over there some day soon and look for a good place to set them. And then we'll plant the bomb on some good holiday — say on March 21, eh?"

"What's that day?" Polignani inquired.

"The Commune!" Abarno answered.

Polignani bought the antimony and the chlorate of potash, and at a subsequent meeting watched uneasily while Carbone tried to pulverize the antimony with a hammer. It was too hard work, however, and "Baldo" was directed to buy a small quantity of the pulverized substance. This he did. The three had meanwhile been trying to pick out a good room in an English-speaking lodging house in 29th Street, but finally gave it up and hired a furnished room at 1341 Third Avenue. There they brought their materials, consisting of twelve yards of copper wire, a trunk full of odds and ends, tools, fuse cord, and various ingredients. To this supply they wanted to add some hollow iron balls, but the hollow iron ball market was sparse, and they finally substituted three tin hand-soap cans. On February 27 Polignani and Abarno made a tour of inspection

of St. Patrick's, and as they were descending the steps Abarno remarked that when he had destroyed the Cathedral they would turn their attention first to the Carnegie residence at 90th Street and Fifth Avenue, and then to the Rockefeller home. "We won't wait till March 21," he observed impatiently. "Let's get this job done soon. Say Tuesday morning."

High noon of the following day saw the three plotters cheerfully at work in the furnished room. Abarno and Carbone measured carefully the proportions of sulphur, sugar, chlorate of potash and antimony; Carbone filled the tins with the mixture, and led the fuses into the heart of the mass, glancing up from time to time to the detective with real pride, as if to say: "See, Baldo? That's how an expert works!" "Baldo" had contributed his share of the materials — a few lengths of iron rod. Carbone bound these to the outside of the cans with cord, and added a few bolts which he found in a bureau drawer, and a coat-hanger, twisted out of shape. Round and round this shapeless tangle of metal he wove copper wire, and so produced two heavy, compact bombs. Polignani had grown almost gray when, after boring the fuse holes in the can-tops, Carbone casually picked up a hammer and began to

A postcard received by Commissioner Woods after the arrest
of the Anarchists

The message reads :

" MR. WOODS

My Dear Sir

Your police Espionage may go as far as you like for the promotion of
your Bankrupt Law & Order of Society. The Anarchists of New York
have but one Life to give for the Ideal of Humanity and absolute Freedom
of mankind the world over. yours The Society for the Propagation of
absolute Liberty and Human Freedom. . ."

tattoo the cans. The detective promptly took refuge behind the bed, near the floor.

"No use to hide there, Baldo!" This with a laugh from Carbone. "If she goes off she'll blow the whole house down. How's that, Frank?" he added, showing the finished product to Abarno.

"I'll throw that one and you can throw the other, Carbone," Abarno said. "Now listen. We will meet here Tuesday morning at six o'clock to the minute. We will get to the Cathedral just at 6.20. Then we'll light the bombs, and the fuses will burn slow for twenty minutes, so as we can get over to the Madison Avenue car and then we can all get to work on time, and we will have a good alibi all right. Then we'll get together Tuesday night and go some place and have a good time to celebrate throwing a scare into Fifth Avenue, boys! Tuesday morning, six o'clock sharp?"

Carbone and Polignani assented, and Abarno left.

Polignani kept in close touch with me from that moment forward. Ever since the day when Carbone had sent him to the drug store for black antimony, with instructions to bribe the drug clerk if he could not easily obtain it, we had had a double check on the conspirators, for I had as-

signed two men to shadow them constantly. The case was building towards a climax. Polignani had shrewdly kept the slip on which Carbone wrote the prescription for the explosives, and when Carbone asked where it was he said, "I tore it up. I didn't want it to be found on me. It would get me into trouble." The anarchist praised the detective for his forethought. The two men from the Bomb Squad never let Abarno and Carbone out of their sight, so that for a month we had not only the direct evidence of Polignani of what the conspirators said and did in his presence, but evidence from the two shadows which accounted for their time more fully, probably, than they could have recalled themselves. And so when Polignani — who did not know he was being observed — told me of the final plans, I passed the information on to the two shadows, and we formulated a counter-campaign for Tuesday morning.

Shortly after sunrise on Tuesday, Polignani tumbled out of bed and into his clothes. He ate a hasty and nervous breakfast at a cheap lunch-room around the corner, and hurried to the sidewalk before 1341 Third Avenue, arriving a few minutes after six. Abarno joined him at 6.30.

"Where's Carbone — isn't he here?" he said by way of greeting.

"No," replied "Baldo."

"Well, we can't wait for him. We can't lose any time. I got to be at work at 7.30. Come up and get the bombs with me. We'll probably meet him on the way down the street. Or maybe he's at the shoe-shop."

The two men went upstairs and into the third-floor-back. "Give me the key," Abarno muttered. Polignani did so. Abarno opened the trunk and took out the two bombs. "You take one and I'll take the other," he whispered. "Come on. Put it under your coat."

When they started down Third Avenue the two shadows — who had also risen early — disengaged themselves from the doorways where they were idling and proceeded at an even pace down the Avenue behind the men. A few hundred yards or so in the rear of the procession was a limousine, and I was in the limousine. I could spot the men distinctly, and I had to chuckle when I saw them catch sight of a uniformed officer a block or so ahead and hastily cross the street. The same thing occurred twice again in the course of the march. Our parade continued. No one but ourselves paid any attention to the two labor-

ers who were carrying lumpy bundles under their coats.

At Fifty-third Street my chauffeur turned west and slipped into high speed. We were at the Cathedral in a minute more, and I jumped out and hurried into the vestibule. No one there but three or four scrub-women, puttering around in the half-light with their mops and pails. Several hundred worshippers were already gathered in the front of the nave, where Bishop Hayes was conducting early mass. As I passed into the body of the church there was no one near except an elderly usher, with white hair and beard. I stepped into a dark corner and waited.

A matter of two or three minutes passed, though it seemed much longer. Then I saw Abarno and Polignani enter the vestibule, cross it and enter the church itself, taking their cigars out of their mouths as they turned towards the north aisle. Abarno led the way. At the tenth pew he motioned to Polignani to sit there, and Polignani obeyed, dropping to his knees in prayer. Abarno continued to the sixth pew ahead. Two of the scrub-women had deserted their mops, and were dusting the pews along the north aisle near the newcomers. Abarno rested for a moment in his pew, with his head and body bent as if in prayer,

1. Detective George D. Barnitz 2. Detective Patrick Walsh
3. Detective James Sterett
4. Left to right: Patrick Walsh, Jerome Murphy and James Sterett

then rose and rejoined Polignani. Again he rose, and this time moved toward the north end of the altar, where he crouched for several seconds, placing his bomb against a great pillar. With his other hand he flicked the ashes from the coal of his cigar and touched the glowing end to the fuse. He had taken perhaps three steps down the aisle again when the scrub-woman stopped plying her dust-cloth. She fastened an iron grip on Abarno's arms and hustled him down the aisle so swiftly that no one remarked the affair. The scrub-woman was Detective Walsh, disguised. The elderly usher passed the two and hurried to the spot where Abarno had crouched by the pillar. He saw the lighted fuse and pinched it out with his fingers. The elderly usher, underneath his makeup, was Lieutenant Barnitz. Polignani was promptly placed under arrest and led to the vestibule with Abarno — for the evidence was not yet all in.

Abarno immediately suspected Carbone of treachery. He protested violently that the missing conspirator had instigated the whole affair, that it was his idea, that he had made the bombs, and that he could be found living with a Hungarian-Jewish family on the fourth floor of a house at 216 East 67th Street. He was fluent

in the accusations he made against Carbone, and he grew more fluent as he recovered from the fright of his arrest. So while we escorted the two bombs and the two prisoners to headquarters, other members of the Bomb Squad visited Carbone and placed him under arrest.

From them at headquarters we verified the story as we already knew it. Each man accused the other. Both men exonerated Polignani of any part in suggesting the plot or in making the bombs for several days after their arrest. But Polignani's true identity could not be unknown to them indefinitely, of course, and when they found out that they had been confiding in a full-fledged detective — ah, then the storm broke! Prompted, I suspect, by pseudo-legal advice, they cried "Frame-up!" until they grew hoarse, but it was too late, for in the possession of Assistant District Attorney Arthur Train was already a sworn statement which fixed their guilt by their own confession.

The anarchists rushed to their rescue, but their efforts were chiefly verbal. At the Brescia Circle, and at I. W. W. headquarters at 64 East 4th Street, it was common gossip that counsel for the defendants were going to supply 45 or 50 witnesses to swear that Polignani had invited them to

4. Carmine Carbone

make bombs. This I had enjoined him strictly not to do, as a newcomer who talks bombs is a suspicious character in anarchist circles. I know he obeyed. There was organized a "Carbone ed Abarno Defence Committee" with headquarters at 2205 Third Avenue, which solicited other neighboring Italian clubs with anarchistic tendencies for support of the two. Polignani's photograph appeared presently in a New York Italian newspaper with this caption:

"The filthy carrion who by order of the Police of New York devised the bomb plot which led up to the arrest of Abarno and Carbone, now before the Courts. All of us comrades will keep this in mind."

He received several threatening anonymous letters, some bearing the familiar "black hand," others sketching on newspaper photographs of him the point in his anatomy at which he might expect to feel the dagger of revenge; others mere bombastic defiance. (The anonymous letter-writer is very often a courageous soul who spells out his messages with letters and words clipped from newspapers, so that his handwriting will not betray him.)

What was the reward of those five months invested in patience? The two prisoners con-

victed and sentenced to terms of from six to twelve years, was one result. But a far greater one was a sharp decrease in bomb-throwing in New York, and perhaps the most gratifying was the discord which grew in the Brescia Circle. The group was frightened, and the members began to suspect each other of espionage. One former anarchist was quoted as saying that he wouldn't even trust himself — he had been dreaming the night before that he was a spy. The Brescia Circle became disorganized, and several other similar groups in the city suffered the same fate. Their leaders drifted away — and got into more trouble, as we shall see later.

We never found the original of the treatise on bombs. Carbone said he had destroyed it. But there are probably other copies from the same press in the hands of accredited bomb-throwers. If not, they may apply to the New York police department.

IV

THE HINDU-BOCHE FAILURES

Bret Harte said that "the heathen Chinese" was peculiar. The British have learned long since that the Hindu, being an Oriental, cannot help being equally "peculiar," and it is a great tribute to British persistence that it has labored so hard and so successfully in the good government of a people so temperamentally complex. They have studied the Hindu, and have understood him as well as may be. Understanding him they have watched him. When war broke out, this great Oriental empire presented to Britain a grave problem, for as a Hindu editor in the United States phrased it, "England is Germany's enemy. England is our enemy. Our enemy's enemy is our friend."

It is not in my intention or power to discuss the methods which England employed to maintain strict loyalty in the Indian peninsula, but to outline here the part we played in uncovering a plot

which threatened seriously to complicate her efforts around on the other side of the earth.

Scotland Yard told us in February, 1917, that Hindus were conspiring in bomb plots with certain Germans in the United States. If it was true, it was against the laws of our country. They supplied us with a few names, but tactfully suggested that inasmuch as it was our country and our laws which the plotters were attempting to disturb, we would prefer to develop the case ourselves. Various authorities in this country had already had strong suspicions of the British claims, but as yet those suspicions had not grown to proof of any specific act. So we went to work.

Among other names which were furnished us was that of one Chakravarty, whose address was 364 West 120th Street, New York. For more than a fortnight men of the Bomb Squad under Mr. (now Lieut.-Col.) Nicholas Biddle, as special aid to the commissioner, watched that house. They hired a room opposite, where through a slit in the window shade they could keep the doorway under observation. At the hours when working New York leaves its home to make money, and comes home at night having made it, the door was rarely used, but sometimes at mid-

forenoon, sometimes in the small hours of the morning, the men on watch saw several dark-skinned individuals pass in and out of the house. The building itself gave no sign of suspicious activity. We were on the brink of war, and as was the case in most of the other houses in the block, an American flag hung draped in the front window. What went on behind the camouflage screen we did not know. Now and then our men, hiding in the shadow of the areaway, would go quietly up into the dark doorway and listen, but the house never gave out a sound. There was certainly no indication that these Hindus were conspiring with the Imperial German Government in dynamite plots.

We knew certain East Indians who could be depended upon, and told them to call upon Chakravarty. This ruse failed because Chakravarty never presented to the callers anything but a guileless reception. So far as they could learn his occupation was that of manufacturer of pills; he and a certain Ernest Sekunna constituted the Omin Company, which company packed in aluminum boxes and sold to a limited clientele pills which like most patent remedies were recommended for any ailment from indigestion up or down — if the pill sold, then it was a success. This news did

not quiet our impatience, and we decided on a raid.

On the night of March 7, 1917, Detectives Barnitz, Coy, Randolph, Murphy, Jenkins, Walsh, Sterett and Fenelly called at the house, Sterett, pretending to be a messenger, and carrying a dummy package, presenting himself at the front door, and the rest of the party covering other avenues of escape. The portal was opened by a little Hindu who looked up innocently to Sterett and said that Dr. Chakravarty was not in — he had gone to Boston. The detectives announced their intention of searching the house. The little man protested, and was given certain short reasons why the search was in order. Surprise, injured innocence, and irritation crossed his olive-drab face, and he announced that he was a patriotic American and that he had never done anything to break the laws of the United States. If we wanted Dr. Chakravarty, he said, we should go and get him, and not disturb a peaceful household in this way, and he added that Chakravarty had left for New England months before, leaving no address. In this the little Hindu was borne out by the answers which the other occupant of the house gave to our questions — this was Sekunna, a German of thirty-five or so. We searched the

house, and took the two prisoners and considerable material to headquarters.

The search disclosed a supply of literature of the Omin Company describing the properties of its pills, a photograph of Sekunna and Chakravarty as the turbaned benefactors of an unhealthy world, and a number of express money-order receipts, deeds and a bank book which showed the missing Chakravarty to be one who had acquired a good deal of money during the past two years. The photograph on closer inspection revealed that the little prisoner was Dr. Chakravarty himself. Sekunna verified this, and Chakravarty, confronted by it, admitted it.

We asked the prisoner how he had suddenly come by the \$60,000 which his books showed. He said that it was his inheritance from the estate of his grandfather in India, and that no less a personage than Rabindranath Tagore, the Indian poet, had paid him, in December, 1916, \$25,000 of the \$45,000 due from the estate. About \$35,000 had been given him, he added, by a lawyer named Chatterji, from Pegu, Burma, in March, 1916.

So far as he gave us his history, it related that he had graduated from the University of Calcutta, and had lived for a time in London, and

later in Paris, before coming to the United States. He had heard that there was a warrant out for his arrest in India for sedition, probably due, he suggested, to his having written several articles on the subject of British Rule.

“Have you been to Germany recently?” I asked.

“Of course not,” he answered. “How could I get there, with the British watching for me? They would arrest me if I tried to go. Why do you ask that?”

“Because I wanted to know,” I answered. I had good reason to believe that he had been there because among his effects we found several exhibits which pointed toward such a trip. A letter from a woman in Florida dated December 13, 1915, said:

“I would never for one moment try to deter you from the effort or achievement of your lofty ideals and noble aims, for in this as in many other things my spirit accords with yours. Brother dear, *do nothing, say nothing, trust nobody*, without extreme caution. God speed you. God hasten your return to those who are interested in you, and in all in which you are interested. Bless you, precious brother.”

This indicated a journey, clearly. A cablegram

dated Bergen, Norway, Dec. 23, 1915, addressed to Sekunna, read, "Safe arrival here," and took him as far as the Continent, at least. Three post-cards supplied the rest of the information; they were addressed by Sekunna to himself at a Berlin address, and bore the instructions, "Return to Sender, E. A. Sekunna, Omin Company, 417 E. 142nd Street, New York City"; postmarked Berlin in December and January, they suggested that Chakravarty had used them as part of a pre-arranged system of communication with America in which he did not wish his own name used.

I found among the papers a photographic print of Chakravarty wearing a fez, which I knew was not an orthodox head-dress for a Bengalese. Furthermore, it struck me that the print was of the size and finish usually used on passports for identification of the bearer. I showed it to him, with the remark:

"Why do you tell me you haven't been in Berlin, when you used this photograph so you could get a passport as a Persian?"

He bit. "I see you got me," he replied. "I lied to you. I want to tell you a different story—the real one. I did go to Germany."

"Why?"

“To see Wesendonck. He is a secretary for India of the German foreign office. He wanted to make plans for propaganda for the liberation of India from British rule.”

Chakravarty sat there and unfolded an amazing story. He touched gingerly upon his own part in it at first, then evidently sensed the fact that there were others in the plot guilty of perhaps no less reprehensible but more violent crimes, and the little doctor's capture and confession not only gave clues to the authorities which enabled them to follow up the outstanding German-Hindu plots in America, but developed prosecutions of the first magnitude and the keenest general interest.

The enterprises must be recounted out of their actual sequence. The first he claimed to have had little part in — the project of an uprising in India which its sponsors hoped would repeat the Mutiny of 1857 — but with a more successful outcome. Captain Hans Tauscher, the New York agent of the Krupp steel and munitions works, was in Berlin when war broke out. He reported for active duty to Captain von Papen, in New York, as soon as he could cross the Atlantic, and one of his earliest services was the purchase of a large quantity of rifles, field guns, swords and cartridges,

1. Franz Schulenberg 2. Ram Chandra
3. Ram Singh (on the left)
4. Dr. Chandra Chakravarty and Dr. Ernest Sekunna

which he stored in 200 West Houston Street, New York. On January 9, 1915, he shipped a train-load of arms and ammunition to San Diego, California. There it was loaded into a little vessel, the *Annie Larsen*, which had been chartered by German interests, and the *Annie Larsen* put to sea, ostensibly for Mexico, where revolutionary arms were in demand. Her real destination was a rendezvous off Socorro Island with the *Maverick*, a tank-ship which had been bought in San Francisco with German money. The *Maverick* was to trans-ship the arms, flood them with oil in her cargo tanks in case she might be searched, and proceed by way of Batavia and Bangkok to Karachi, a seaport in India which is the gateway to the Punjab. There she would be met by friendly fishing vessels who would land her cargo, and if all went well, there would be a massacre of the garrison of Karachi, and hell would break loose over India. The effect of such an uprising upon Great Britain's sorely tried military condition of early 1915 would have been incalculable. The native troops in France who were helping to stop the breach until England's great armies could be trained would have to be recalled, the semi-loyal tribes would have seen their opportunity, Germany would hardly have hesitated to throw a Turkish

force at the northern passes, and altogether it would not have been pleasant for the integrity of the British Empire.

The *Maverick* and the *Annie Larsen* missed connections at Socorro. The *Annie Larsen* wandered about the Pacific for some weeks and eventually put into Hoquiam, Washington, where the United States seized the arms. The *Maverick* blundered from Socorro to San Diego, to Hilo, Hawaii, to Anjer, Java, by way of Johnson Island, then to Batavia, Java, where she was received with disappointment by a German agent and where she was finally sold. The filibuster ended in flat and costly failure: the arms cost not less than \$100,000 and probably \$150,000, the freight to the Pacific Coast some \$12,000, the charter of the *Annie Larsen* \$19,000, the purchase of the *Maverick* involved hundreds of thousands, not to mention the individual fees of the numerous agents employed.

We knew in a general way of this plot, though it remained for the tireless efforts of United States District Attorney John W. Preston in San Francisco to unearth the details. In a raid which had been made on the office of Wolf von Igel, von Papen's secretary, at 60 Wall Street, New York, agents of the Department of Justice had

found von Igel's memoranda of correspondence in arranging the expedition through the San Francisco consulate. But Chakravarty said that the revolutionary end of the project had been handled by another Hindu, Ram Chandra, and denied that he was guilty of any part in it. Ram Chandra had negotiated with the German consuls in Seattle and San Francisco, and through them with Tauscher and von Papen. Chakravarty supplied the names of Hindus who had sailed on the *Annie Larsen*, said that there had been Filipinos and Germans aboard as well, and added that the Filipinos had been transferred to a German ship, and had later escaped from her in a motorboat while she was being pursued by a Japanese cruiser. But, he said, he had nothing to do with it — it was Ram Chandra who was the real agent.

It was this Ram Chandra who was editor of the Hindu revolutionary newspaper *Ghadr* (Mutiny) published at Berkeley, California. He succeeded to the editor's chair in 1914 when his predecessor, Har Dayal, out on bail after an arrest for ultra-free speech, had fled across the continent and the Atlantic Ocean to Berlin. There Dayal established the Hindustani Revolutionary Committee, collaborating with, taking orders from, and financed by the German Government,

under the direction of Herr Wesendonck of the Foreign Office. Ten million marks had been placed to their credit, and German consulates throughout the neutral world had instructions through their parent-embassies to render all possible assistance to the revolutionary project, and to spend whatever money might be necessary, charging it to the account of the Indian Nationalist Party. Three hundred thousand dollars was invested in China and Java. Hindus were sent through Persia and Afghanistan into India with German credit to foster unrest, and Afghanistan itself was full of spies trying to break the Amir's promise, given to the British Government at the outbreak of war, that he would maintain strict neutrality. It was this same Har Dayal who conferred with Chakravarty when the latter made his visit to Berlin in December, 1915. The reason for this visit to Berlin came out very soon, and that will lead us in turn to the second of the German-Hindu plots hatched in America.

Chakravarty got bail from a surety company without much trouble. Two or three days after his arrest he called me up on the telephone and said that a man named Gupta had threatened him. "He says I must give him \$2,000. And there is another man named Wagel. He is a Hindu.

He wants \$10,000 from me, otherwise he will do me harm. He already has had \$7,000 from the German Government in Mexico. He has demanded \$20,000,000 of Count von Bernstorff to finish up the revolution in India."

"Wait a minute, now," I suggested. The figures were going to my head. "Where is Wagel?"

"I do not know," Chakravarty answered.

"Well, where is Gupta?"

"He is a student at Columbia," replied the little man.

"All right, doctor," I said, "we'll not let any harm come to you."

Detectives Coy and Walsh at once got on the trail of Gupta. They found him in his dormitory room at 73 Livingston Hall, Columbia, and brought him to headquarters. "I saw of Chakravarty's arrest in the paper," he said, "and I thought I might be arrested if he implicated me." Gupta knew full well he would be arrested, for there was jealousy between the two, and he went on to reveal why.

Heramba Lal Gupta was then thirty-two years old. Since his boyhood in Calcutta he had been all over the world, and had studied in the United States. In the spring of 1915 he had several

conferences with Captain von Papen in the city in which the military attaché conceived such confidence in the young Hindu that he gave him \$15,000 for expense money and sent him to Chicago to confer with Gustav Jacobsen, an ex-German consul. With him went Jodh Singh, another Hindu who had migrated from Brazil to Berlin and thence to Captain von Papen, and an art collector named Albert H. Wehde. They were joined by George Paul Boehm and a German named Sterneck, and two plans were arranged. Gupta, Singh and Wehde were to proceed to Japan to establish connections and obtain assistance for fomenting Indian revolt. Boehm and Sterneck were to go to the Philippines, pick up a third plotter, Chakravarty's lawyer-friend Chatterji, proceed thence to Java to meet two escaped officers of the destroyed German cruiser *Emden*, and thence to the Himalayan hills north of India, where Dr. Frederick A. Cook, the Arctic romancer, was on an expedition. There they were to overpower the Cook party, Boehm was to assume the explorer's identity and travel about the hills spreading sedition among the native tribes. This wild plan failed completely, as the Germans never kept their appointment in Java. (Gupta believed in preparedness to the extent of

taking Boehm to several shooting galleries in Chicago and practising pistol firing with him.)

Gupta, Singh and Wehde set sail from San Francisco in the *Mongolia* and landed in Yokohama, September 16, 1915. Gupta immediately got in touch with various prominent Hindus. Although their conferences were enthusiastic and the prospect of obtaining Japanese arms for the revolution was good, his work was hampered by the discovery on the part of British agents that Gupta was in Japan. He was notified within a week of his arrival that he must leave by the next steamer: the next steamer was bound for Shanghai, a British port; the order was equal to delivery into the hands of the British, and death. A Japanese friend came to his rescue. He took him to his house, followed by the police. By a subterfuge the police were distracted long enough to allow the Hindu to slip out the back door, jump into an automobile, and flee to the interior of the country. There he was hidden for six months, between the flimsy walls of his friend's house. It was May of 1916 before he could escape, smuggled out in an eastbound vessel, and it was June before he returned to New York. There he found that the following order had been issued from Berlin:

“ Berlin, February 4, 1916. To the German Embassy, Washington.

“ In future all Indian affairs are to be exclusively handled by the committee to be formed by Dr. Chakravarty. Dharendra Sarkar and Herambra Lal Gupta, the latter of whom has meanwhile been expelled from Japan, thus cease to be representatives of the Indian Independence Committee existing here.

“(Signed) ZIMMERMANN.”

Gupta, in short, found himself displaced. His expedition had been a failure. Chakravarty had had his job for nearly six months. He tried to negotiate with Chakravarty for a restoration of some of his lost prestige, but the little man would not have much to do with him. In January, 1917, the French secret service intercepted at the Swiss border a letter postmarked New York, November 16, 1916, and addressed as follows:

“ Mr. Albourge

“ Hotel Des Alpas

“ Territel

“ Montreau, Switzerland.”

The letter was in cipher, and was seized and returned to French agents in the United States, and by them turned over to the American authorities for investigation, at about the time when

diplomatic relations were broken off with Germany. Search here disclosed little. The letter was typewritten, and the only clue to its message was a hint suggested by a sub-address on the back of the envelope:

“ Mr. Chatterjee ”

who was apparently a Hindu. (This, by the way, was the same Chatterji who persists in cropping up in the wings of this story from time to time). Now there is no “ Hotel Des Alpas ” in Montreux; the name of the inn referred to is the “ Hotel des Alpes.” Again, the name “ Territel ” was apparently a misspelling of “ Territet,” and “ Montreau ” probably meant “ Montreux.” When we captured Gupta we found in a memorandum book not only the address cited above, but the *same misspellings* — pretty conclusive proof that he was the author of the letter. This address was later found with the same misspellings, in the mailing list of *Ghadr*, the revolutionary paper published in California. Thus little errors combined to forge important links.

The code of the Gupta letter was a popular and scholarly volume by an American author: Price Collier’s “ Germany and the Germans,” published in New York in 1913. The letter was so written

that the words which contained the meat of each sentence were carefully enciphered. The letter said, for example:

“. . . I do
not believe there
are very many men
including

98-5-2

98-1-1

98-1-9

98-4-1

98-5-8

98-3-3

“ Who can show much
better results a-
long the line of

97-1-3

97-1-11

97-6-5

97-8-4

132-1-1

“ Undertook ”

Turning to page 98 of “ Germany and the Germans,” we see that the second letter of the fifth line is *b*; the first letter of the first line is *h*; the ninth letter of the first line is *u*; the first letter of

the fourth line is *p*; the eighth in the fifth line is *e*; and the third in the third line *n*. Sum total: B-h-u-p-e-n — a Hindu name. On page 97, the first few lines read:

“ am willing to concede that perhaps even an emperor
has been baptized with the blood of the martyrs,
and feels himself to be in all sincerity the instrument
of God; if we are to understand this one, we
must
admit so much.

“ In certain . . .” etc.

Thus 97-1-3 is *w*, 97-1-11 is *o*, 97-6-5 is *r*, 97-8-4 is *K*; total w-o-r-k. 132-1-1 is *I*. Our translation reads therefore:

“ I do not believe that there are very many men including Bhupen, who can show much better results along the line of work I undertook.”

Four columns to the typewritten page it ran on over seven sheets of foolscap, and wound up with a plea in plain English which showed that Gupta was angry:

“ Seems no action taken yet. If want work, change methods completely. I insist the man in charge is not only useless but spoiling the work;

important workers wasting time for want of co-operation and funds while that man is squandering money. Do not care what you decide, I inform you as it is my duty but you don't seem to pay any attention. This is my last warning for the cause. Again I appeal to you to think more seriously and not spoil the work by leaving it in the hands of irresponsible and insane person. I again tell you that no one is willing to work with him because he does not understand anything, secondly he spends money in a ridiculous way, thirdly he does not do any work. Think seriously and reply."

In order to show why Gupta was upset and also in passing to show how innocently he had coded his letter, we shall quote it in full, with those words in italics which had to be decoded months later:

"Dear *Chatto*: Am back from *Japan*. Had lots *trouble*. *Thakur*, real name *Rash Behari Ghose*, splendid worker in *India* still in *Japan*. Sent report twice, besides messages through *German* sources. Went to *Japan* as planned. Am surprised to hear from *Tarak* you said I had no *right* to go to *Japan*. See my reports submitted to the committee. Before leaving *Berlin Shanghai* authorities also wanted me for important work. This I was told at *German Embassy* so cannot understand why you failed to know anything about me. Have sent two reports since my return. Hope you got them. *Tarak* said you were not satisfied with *my work* and *Bhupen*

Dutt said that such incapable men as *I* should not have been sent to America. *Bhupen* before leaving America said to *Chakravarty* 'Gupta nothing but *adventurer*; should not have been sent,' and as usual everybody knew and it naturally prejudiced men *I* had to work with. What right had *Bhupen* to make such remarks? I don't claim to be a very capable man. You remember I did not want to *come here*. But how *Bhupen* measured my abilities? If no report was received how could anybody pass an opinion on unknown things? You may *criticize my* reticence. I do not believe there are very many men including *Bhupen* who can show much better results along the line of *work I* undertook. Results of such work cannot be shown in *black and white* but I challenge anybody who dares ignore the *solid work* done through *our agencies*. Time alone can prove it. You cannot compare the *work* lately undertaken with the *program* we started with. If we *failed to start a revolution in Bengal* as asked by you it has been for the best. If we *failed land arms* it was due more to *Germans* than anybody else. Our *men worked, suffered. Still suffering*. The whole plan under the direct supervision of *Germans* of more capable *brains failed* too. We have succeeded in laying foundation for *future work*. Our *work in Japan* has been unique. Even *Lajpat Rai* who slights our *work*, quite often admits in three months more *solid work* done there than any other part of the world outside *India* in number of years. I understand *Chakravarty* has

charge of affairs. Met him. *Tarak Harish* says he was given instruction to form a *committee* of five including *myself*. He did not agree. Said all depended on his discretion. Fact is he has grudge against me and the fault lies with *you*. Report went to *Berlin* concerning his *relations* with *Mrs. Warren*. You told him I did it. I did not. Even if I did you had no business to mention my name. I like also to know how did the *committee* satisfy itself as to the charge being false. From *Chakravarty's letters* only? He wanted me to *apologize*. I did not: will not. First I did not *report*; secondly suppose I did, in the interest of the *cause*. I was of opinion he had *connection with Mrs. Warren*. She came to know many things about *work* through *him*. Am still of same opinion. I do not care how many *women man enjoys* but he has no right to talk about serious *work to women*. I do not know what *work he* doing. Does not give me any information. The *house* he took with *princely furniture* shows at once *German connection*. Some of his *pamphlets* nothing but *German propaganda*. It may be your *policy*. We have *centres in Japan, Burmah, Manila*; regular *communication with India* through *Japanese* sources. *Working* but badly *in need of funds*. Started *work* with *impression balance of funds credited to my account* would be forthcoming but no sign of it. For better *work* need send at least one more *man to Japan*. *Tarak* going *China*, *Chakravarty* told

Did not mail the first letter as waiting for information from *Berlin*."

Followed the postscript in English already cited.

The reader will probably be interested, even at the cost of interrupting the narrative, in the way in which this cipher code was discovered and the letter translated. By a partial decipherment by common methods of deduction, it was found to be almost sure that on a certain page of the code book — the name of which was of course not

then known — the phrase “foreign legation” would appear. The cipher experts deduced, too, that the phrase “rush to a newspaper” must appear in a certain line of another page of the volume, and working further they assembled some twenty-five fragmentary words and phrases of whose position in the missing volume they were certain. The problem was to find the volume. The nature of the words and phrases suggested that the work was a recent one, probably dealing with history — and perhaps with the nature of a people. These limitations reduced the field of possibility to a minimum of 100,000 volumes, and the cipher experts set agents at work searching for such books. The caption of the letter, “Hossain’s Code,” threw them off the scent and they spent some time in scouring Allied Europe and America for such a code. There was none, for “Houssain” was merely a Hindu agent in Trinidad. Then, one of the agents hunting for the needle in the haystack found it — Mr. Collier’s book.

Gupta, it is evident, was a prejudiced judge of Chakravarty’s ability. Even when Gupta was arrested Chakravarty wiped out past scores, and went bail for the man who had blackmailed and traduced him. But Gupta was definitely in

trouble this time. The evidence supplied of his trip to Japan, its purpose, and his collusion with Germans brought him to trial in Chicago with Jacobsen, Wehde, and Boehm. (Mr. Chatterji was a witness for the prosecution.) The three Germans, after a trial in which the State's case had been admirably handled by U. S. District Attorney Clyne, were convicted and sentenced to serve five years in prison and pay fines of \$13,000. Gupta was sentenced to two years, fined \$200, and released on bail, pending an appeal. He jumped his bail and escaped to Mexico in May, 1918, while a number of his countrymen were being tried in San Francisco.

His escape was probably due to fear. The Hindus are a vengeful lot, and it is no more than possible that the "grapevine cable" had informed him that friends of the men on trial in San Francisco were planning to get even with him for having supplied part of the evidence used against them. Some of that evidence we found in his room at Columbia, and more in his safety deposit box in a Columbus Avenue bank. Among other items was the list of addresses in Switzerland already mentioned, and this was amplified by a letter which we found in Chakravarty's house, from Sekunna to the little doctor, which read:

" My dear boy,

" Enclosed please find addresses from Wesendonck. Send your reports to: Mr. Director Karl Hirsch, Kreuzlingen, Switzerland."

Chakravarty, in turn, furnished us with two more codes which were used in writing to these addresses: One which cited pages and word-numbers in a certain German-English dictionary, and a second, based on an entirely different principle. The second and third were often used in the same letter, as this fragment from one of Chakravarty's reports will show. The letter reads, in part:

" 50337069403847695228, 265-3, 331-6, 497-2, 337-10-3, 335-14, 77-11."

The first series of figures is written in the third code mentioned, and must be deciphered by using the following square:

	1	2	3	4	5	6	7
1	A	B	C	D	E	F	G
2	H	I	J	K	L	M	N
3	O	P	Q	R	S	T	U
4	V	W	X	Y	Z		

Each letter is indicated first by the digit marking the horizontal row in which the letter falls, second

by the number of the vertical column. Thus "A" is 1-1, or 11: "K" 2-4, or 24, and so on. But if the Hindu wished to transfer a message in cipher, he would not stop with this simple designation of the letters, for they would recur too often and fall too readily under the "laws of repetition" by which most ciphers can be untangled. So after he had his word translated by this square chart, he added four key numbers to it, those key numbers being fixed and permanent, and being added in rotation. In order that we may find out what this word is, we must therefore subtract the key number thus:

<i>Message</i>	50337069403847695228	(or divided into letters)
	50 33 70 69 40 38 47 69 52 28	
<i>Key numbers</i>	25 11 26 32 25 11 26 32 25 11	
<i>Result</i>	25 22 44 37 15 27 21 37 26 17	

Consulting our chart again, we see that 25 is "L," 22 is "I" 44 is "Y," and that the message deciphers thus:

LIYUENHUNG

The line we quoted above read:

"Li Yuen Hung is now the president of China"

After transmitting the proper-name in the second cipher (as the name of course would not have appeared in the dictionary code), Chakravarty had lapsed back into the first code, as being swifter.

Gupta, we observed, was harshly critical of Chakravarty. Let us see whether he was justified. Chakravarty said he had been commissioned to deal only with the broader propaganda. From captured reports which he transmitted through the German embassy as well as through the mails to Switzerland, he had been delegated to form a committee of five, with Ram Chandra as one of the other members, to handle Indian affairs here. They were to send an agent to the West Indies to stir up the Hindu coolies there, of whom there were estimated to be 100,000, and to send back to India all who would volunteer for revolution. The same policy was to be followed in British Guiana, Java, and Sumatra. From Ram Chandra's *Ghadr* press were to be issued reams of propaganda in the various Indian dialects for circulation throughout the East and West Indies, in Hindustan itself, and even for German aviators to drop upon Hindu troops in France. Chakravarty was to procure letters of introduction to parties in Japan which would assure a safe welcome to an emissary to be sent there to carry out

what Gupta had failed to do, and an envoy was to be sent to China for a similar purpose. It was a broad program, and the doctor set to work immediately upon his return to organize his staff.

In all his work he had the coöperation of von Bernstorff and the embassy at Washington. Chakravarty organized a Pan-Asiatic League as a blind, so that Hindus posing as its members could travel without exciting suspicion. His work was somewhat handicapped in the early spring by an automobile accident which took him to the hospital, and by the seizure of the military attaché's papers in von Igel's office. He hired a Chinaman named Chin as the delegate to China, and shipped him off on a Greek vessel from New York. Referred by Berlin to Houssain, the spy in Trinidad, Chakravarty established contact with him, and supervised the formation of an organization there. In July Chakravarty started for a tour of the West, in the course of which he visited two disloyal Hindus in Vancouver and determined upon a plan of action for that section. Then he swung down to San Francisco, where he called upon Ram Chandra, the western head of the committee. He conferred with friendly agents of Japanese newspapers who proposed to attack the Anglo-Japanese treaty. He conferred with W. T. Wang,

private secretary to the new president of China, as the secretary was leaving for Peking, and learned that "some of the prominent people are quite willing to help India directly and Germany indirectly — on three conditions, those conditions being a secret treaty with Germany for military protection, to last five years after peace had been declared, and to be secured by giving China one-tenth of all the arms and ammunition which she would undertake to smuggle across the Indian frontier." By the late autumn of 1916 Chakravarty was acting as the master-wheel in a most elaborate and complicated machine for disturbing British rule in almost all of her colonial holdings, and it is safe to say that if the *Maverick* affair had not roused shipping inspectors to unusual vigilance to prevent filibustering, the United States might have seen the bloody result of his work by March of 1917, when we arrested him. Even as it was, he was the general manager of a going concern.

It may be wondered how he was able to perfect an organization. The answer to that we found in Gupta's safety deposit box — a list of two hundred or more members of an Indian society in the United States, a large proportion of whom were students in American colleges, sent

here for education on scholarships, in the hope that they would return to their native country and uplift it. Some of them were influential agents, and they were scattered conveniently about the country. Add to this force the coöperation of almost innumerable German agents and pay it with a share of the \$32,000,000 which Chakravarty said had been set aside in Berlin for anarchistic, race-riot and Hindu propaganda in the western world, and you have a real factor for trouble. It is perhaps surprising that the organization worked undiscovered as long as it did, but it is more surprising that having worked under cover for more than fourteen months it did not break out into a grave demonstration. Chakravarty's arrest, however, came in time, and the authorities were on the whole satisfied that so much time had elapsed because it gave them more clues to work on and a larger group to round up.

And Chakravarty himself was pleased, I think. When he confessed his trip to Berlin, he was on the horns of a dilemma, for he feared the British would revenge themselves on him. I assured him that he would be protected as an American prisoner. He said, "Well, if I tell you about what I have done for the Germans, and they hear

about it, they will kill me. And in any case my own people will kill me. You don't know them!" I again quieted him and suggested that he tell me now where he got the money which he said had come to him from his estate in India.

"Von Igel gave it to me," he answered. "I could not go to his office downtown, so I sent Sekunna. In all I got \$60,000. I spoke of the poet, Tagore, because he won the Nobel prize, and I thought he would be above suspicion." He had bought the house at 364 West 120th Street and equipped it comfortably as a residence. He bought a house in 77th Street to open a Hindu restaurant. He bought a farm at Hopewell Junction to use as a rendezvous for the plotters. And when he had given us valuable information, and had appeared at the trial, and had been himself convicted and had served his sentence (a short term) in jail, and the smoke had cleared away, he was the owner of three nice parcels of real estate and a comfortable income. Dr. Chakravarty, although a failure as a Prussian agent, fared pretty well as an investor of Prussian funds.

After a series of digressions which I hope have not led us too far from the path, we may return to the third of the Hindu-German projects in which we of the Bomb Squad were especially in-

terested. Ever since Captain von Papen's check-book had been captured by the British at Falmouth in January, 1916, students of the German plots in the United States had wondered why two of the stubs bore the entries:

- " Feb. 2, 1915, German Consulate, Seattle (Angelegenheit) \$1,300.
 " May 11, 1915, German Consulate, Seattle
 (for Schulenberg) 500."

In December, 1917, Barnitz, Randolph and I had gone to San Francisco to testify in the *Annie Larsen-Maverick* case. It so happened that a German who was unable to give a satisfactory account of himself had just been picked up at San Jose. His name was Franz Schulenberg, and at the invitation of the San Francisco authorities we assisted in the examination of the prisoner. He testified that in the early months of 1915 he had met Lieutenant von Brincken, of the San Francisco Consulate, who had sent him to the consul at Seattle. There von Papen in person paid him \$4,000 to buy fifty guns, fifty Maxim silencers, a ton of dynamite, and deliver it to one Singh, at the border between Sumas, Washington, and Canada. There Singh was to deliver it to a small

army of coolies, who would start a reign of terror in the Canadian northwest, dynamiting bridges, railways and shipping, and shooting guards. Schulenberg had actually bought some of the munitions when he received a letter from von Brincken telling him to break off relations with the Hindus. After some time he tried to get more money from von Brincken, but Franz Bopp, the consul, spurned him, and von Brincken sent him to New York, to get it from von Papen. Von Papen refused to pay him further. While Schulenberg was in Hoboken, three men from Paul Koenig's staff approached him and posing as United States agents offered him \$5,000 for any information which would incriminate Count von Bernstorff. Von Papen had had Koenig send them — although Schulenberg did not know this — to test him. One of the three was George Fuchs. The air was getting thick around von Papen's head at the moment, and he could not afford to have a disgruntled and unpaid henchman gabbling about the saloons in Hoboken. But Schulenberg believed that the three were really American secret service men, and refused to divulge what he knew. The next morning a German whom he had not seen before appeared at his lodging house and gave him a railroad ticket to Mexico. "They're after

you — the secret service," he said. "Here's a ticket. Use it." Schulenberg was half sick anyway, and evidently it did not enter his mind to squeal. He fled to Mexico, and von Papen thus disposed of a troublesome source of information. When we talked to Schulenberg, two years later, he was a sorry reminder of another German failure.

Although we three members of the Bomb Squad had made the trip to San Francisco to testify to the circumstances of Chakravarty's arrest, and to the statements which he and Gupta had made, we were not in at the death of the Hindu hunt. The trial was a long affair, with more than a hundred defendants. Aided by the revelations of the little doctor, the Government had presented to the Grand Jury a picture of violation of Section 13 of the Federal Code which caused indictments to be returned against the entire German consulate of San Francisco, its accomplices among the shipping men who chartered the *Annie Larsen* and bought the *Maverick*, its Hindu agents from the nucleus of Berkeley and Ram Chandra's editorial rooms, and a list of other notorious characters which included von Papen and von Igel, both of whom were by this time safe in Germany. We did, however, have opportunity to observe the

Indian prisoners, and we noticed that they did not seem altogether fond of each other. They were forever whispering, wagging their heads, stuffing notes down each other's necks and when the testimony of one of their number grew too truthful they squirmed and scowled. Chakravarty's life was threatened during the trial. The officials in charge of the case all had more than their usual share of responsibility to maintain order. The trial lasted more than six months. The Germans upbraided each other in the court room: von Brincken, who had been jealous of Bopp, and had accused him of indifference to his duties, openly showed his independence of his chief, and ill feeling spread among the defendants. Its climax came on April 24, 1918, the day when, with the testimony all in, Judge Van Fleet ordered a recess preparatory to delivering his charge to the jury. Ram Singh, one of the defendants, suddenly rose in the court room and fired two shots at Ram Chandra from a revolver. Ram Chandra fell dead, and as he did so, a bullet from the revolver of United States Marshal Holohan broke Ram Singh's neck. The jury then received its charge, retired, and returned convictions of the great majority of the conspirators.

So, just as Holohan's bullet broke Ram Singh's

neck, Chakravarty's statements had broken the neck of the Hindu plot. But there was one more incident related to it in store for us; it will conclude our story. The men in charge of the *Annie Larsen* were a spy named Alexander V. Kircheisen and a Captain Othmer. Kircheisen's name had appeared in several German secret service reports as "K-17." As late as 1917 he was arrested in Copenhagen, Denmark, and on his person was found a letter addressed to another agent, La Nine by name. The letter advised La Nine that if he arrived in the United States before Kircheisen, he was to call for the former's mail at "Kotzenberg's, 1319 Teller Avenue, in the Bronx."

When this information reached us, Detectives Randolph and Senff called at Mr. Kotzenberg's house. He knew nothing of Kircheisen, he said, except that he was a friend of his cousin's.

"Who is your cousin?" asked Randolph, in German.

"His name is Othmer," Kotzenberg replied. "He escaped from San Francisco, and he came back across the whole country, half by train and half in automobile. He stayed here for a while. One morning he put on some overalls and he left and he went away on a Norwegian boat, and I guess now he is back into Germany."

Randolph and Senff searched the house. They found among other papers, an application which Kircheisen had filled out in New York on January 9, 1917, for a certificate of service as an able seaman. In order to be granted such a certificate he had to swear that he was a naturalized citizen of the United States; and that he would "support and defend the Constitution of the United States against all enemies . . . and . . . bear true faith and allegiance to the same," which he swore without any qualms of conscience. Furthermore, his character was attested to by one Charles A. Martin, who also wanted a seaman's certificate. The records of the office show that Kircheisen obligingly turned about and swore to Martin's good character. I have often wondered who Martin was. . . . We found in Kotzenberg's house an expense account which the fugitive Othmer had submitted to von Papen after he had left the unfortunate *Annie* at Hoquiam. And finally, we found two scraps of a memorandum book, which constituted the log of *Annie* herself. It reads:

" Mar.8. left S.D.

Mar.18. arr Soc.

Apr.5. Start Digg.wells.

Apr.9 boat *Emma* arrived.

2 sailors.
 Apr. 10. *Emma* arrived.
 two crews working on well
 April 16. Well 22 feet struck
 hard rock bottom no water gave up
 Apr. 17. left for Mex. coast
 " 22 went ashore in boat
 look for water
 Apr. 24th. arr at Acapulco
 U. S. S. *Yorktown Nansham* (?)
 N. Orleans Annapolis
 April 27 left Acapulco
 May 19 gave up Socorro
 made for coast
 June 7 (*two illegible words*)
 got provisions
 June 29 arr. Hoquiam
 July 1 arr. W.
 1 arr. Investigator
 Jul. 4 *aus* "

So, in a word, Othmer summed up all the efforts of the Hindus and the Germans to hatch revolution in America. All, all "*aus* "!

V

A TRUE PIRATE TALE

Of all the stories of the sea to which the war has given rise, here is one that is certainly not the least entertaining. It is not a story of hunting a criminal. The only part which the Bomb Squad played in it was bringing the prisoner back to justice. It called for no service on our part save that of examining the prisoner, and returning him, with his statements and the statements of others who had dealings with him, to New York. And I think those statements themselves had best tell the story.

(From Detective Corell to the Commanding Officer of the Bomb Squad, April 1, 1916)

Sir: In compliance with orders received I went to Lewes, Delaware, to investigate and if possible bring back one Ernest Schiller, an alleged German spy. . . .

*(From a statement taken by Corell at Lewes, Del.,
March 31, 1916)*

My name is Ernest Schiller. I am a native of Russia, 23 years of age. . . . My occupation is that of textile engineer. I arrived in New York in April, 1915, in the steamship *Colorado* from Hull, England, as a member of the crew, my assignment on the ship being greaser. My name on the ship was Frank Robertson. When I arrived at New York the captain gave me some of my money and I left the ship. I worked all told about eight or nine months, in Pawtucket, R. I., Lawrence, Mass., Whitinsville, Mass., Newton Upper Falls, Mass., and finished erecting a factory in Salem, Mass. . . .

(From the examination of Clarence Reginald Hodson, alias Ernest Schiller, Robinson, Robertson, A. Henry, New York, April 1, 1916)

Question. What is your full name?

Answer. Clarence Reginald Hodson.

Q. What other names are you known by?

A. Robinson, Robertson, A. Henry, and Ernest Schiller.

Q. Where were you born?

A. Petrograd, Russia.

Q. Where were your father and mother born?

A. My father in Russia, my mother in Germany. We lived in Petrograd until I was about 10 or 11. Then we went to England. My father and mother left me in Chatham House College, in Ramsgate. I stayed there three years. . . .

Q. What is the name of the head of that college?

A. A. Henry.

Q. Did you graduate?

A. No. I was put on a Cadet — a Marine ship — named *Conway*, to train as a marine officer. I was on that ship two years. I left when I was 17 and went to work in a machine shop in Oldham, outside Manchester, and learned the trade of machinist there. I left there in August, 1914, and I joined the English Army. . . . I was asked to leave the job — was told that they would not have any young fellows on the job. . . . My boss said that sooner or later I should have to leave and that it would be better to go now, and that there would be a better opportunity.

Q. At that time were your sympathies with the English?

A. They were never with England. I just wanted to see what it was like to be a soldier. I

didn't intend to fight against Germany. I did not think the war would last long — only a few months — and I knew all the time I could run away if I wanted to. So in December I left.

Q. What was the occasion of your leaving?

A. I commenced to discriminate the soldiers and make them out as to what they really were, and I found them a lot of rats. I saw that I was not a Britisher in my ideas, and that I favored the cause of Germany. I used to stay away from the other soldiers all I could, and go out with a newspaper and read in the fields. They were always bullyragging me, and one time I almost killed two soldiers for it. They chastised me for a German spy. I got away, and worked in Bath for a week, and then the police caught me and brought me back, and I was later discharged by my colonel when I explained that I could not agree with their theory of the war. . . .

(From the statement of "Schiller" to Corell)

A few months ago I received a letter from my mother and she wanted me to go back to Russia. I came down to New York to get my passport, but it did not arrive, so I waited a month. My money was gradually going down, so I borrowed some money, I won't say from whom. . . ."

(From the examination of Hodson)

Q. While in Lawrence, Mass., where did you stop?

A. At the Saxsonia House, with Germans. . . .

Q. What are the names of any other people that you met at the Saxsonia House?

A. Met a gentleman named Gruenwald at a German party. He invited me to come to his saloon in Lawrence. . . .

Q. While up in his saloon was there anybody else you were acquainted with there?

A. Nobody, but I knew a young lady who stopped at the same house. . . .

Q. You were quite friendly with her?

A. Yes, platonic friendship.

Q. Did she loan you any money?

A. She loaned me money from her own will. Two hundred dollars. . . . I only asked for \$30, but she brought \$200 in gold, all in gold. . . .

Q. How long after that before she loaned you any more?

A. About a month later. . . . Telegraphed to her "Want money immediately." I received by 12 o'clock \$40. She said some more money coming tonight. Next morning I went to the address in Hoboken and there was a letter and

there was another \$40 in the letter. Then I received \$10 another time from her.

Q. That's \$290.

A. Yes, all I can think of.

(From the "Schiller" statement)

. . . so I borrowed some money, I won't say from whom. I went to Boston again and was looking for work. I could not get the work I wanted, so I returned to New York, and in Hoboken I ran across a few fellows, I do not know their names, and we made a plan to get some money. . . .

(From the Hodson examination)

Q. Now where did you meet the Germans?

A. When I arrived in New York, in a saloon near the Cunard Steamship Company in West Street about 12th, I met a man who I thought was a German, and I talked to him about blowing up ships, and we then went to Hoboken where I met the man Haller in a saloon. . . . Then we proposed which ship to blow up. That was the Cunard liner *Pannonia*. . . .

Q. And how did you come to decide upon that boat?

A. Because I knew perfectly well that all were

carrying plenty of ammunition. . . . I went down to the piers, and I saw this boat, and I thought that would be the right kind of a boat. . . . I met the three men in the vicinity of Pier 54. I bought them their suppers. . . . I then told the unknown man to get some dynamite . . . and I gave him \$6. Becker said that he had a boat, and I gave Becker \$8 to buy gasolene, then to buy two revolvers out of a pawnshop. . . . I bought Haller a revolver and 100 cartridges. . . .

Q. Did you see them after that?

A. Yes, I saw them Saturday morning and asked Becker about his motorboat and he said that he did not expect it would be frozen up, and acted as if he would have been willing to go into the plot only that the boat was frozen up. Becker said that the boat could be launched in two hours, and although I do not know anything about running a motorboat it is my belief that it would have taken six hours to launch this boat — the boat we were supposed to use to go over in to blow up the *Pannonia* — and this would be too late to get to the ship before she sailed. . . . Since that time I have not seen any of these men. . . .

(From the "Schiller" statement)

. . . but the other fellows left me, so I went on

my own accord. I saw the steamship *Mattoppo* was going to leave, so I stowed away on her, in a life boat, where I remained for five days. The sixth day we left. . . .

(From the statement of Captain R. Bergner, of the British S. S. "Mattoppo")

At 3:30 P. M. on the 29th March, the British S. S. *Mattoppo* sailed from 12th Street pier, Hoboken, destined to Vladivostock, Russia.

(From the "Schiller" statement)

That night . . . I came out from my hiding place and walked towards the captain's cabin. . . .

(From Captain Bergner's statement)

At about 7:45 P. M. . . . when at a point about twenty miles from Sandy Hook Lightship, I was talking to the Chief Engineer in his room, and at 8:05 P. M. left and went to my own cabin, and as I entered my bedroom, which was adjoining, I was held up at the point of two revolvers by one Ernest Schiller, who said to me: "Hands up! I am a German. I am going to sink your ship." He then made me turn round and gave me a frisk. He found nothing on me. He ordered me to shut my cabin door; then stood me in a corner and kept me covered with the two revolvers. Then he said: "Where is the safe?"

You have two thousand pounds aboard, and I want the money!" He told me he had placed bombs aboard the ship and was going to blow her up.

At 8:20 P. M. the Second Engineer knocked at my door, and receiving no reply opened it. Schiller instantly covered him with one of the revolvers and ordered him to come into the room, which he did. He then locked and bolted the doors on the inside and asked me for my keys. . . . He got them and proceeded to go through all the ship's papers and my private effects. He opened my cash box and took four pounds in gold and five pounds in silver and said it was the first time he had ever robbed anyone but he needed the money. On seeing from the ship's papers that she had barbed wire in her, he said: "That is contraband, and I am going to sink her." He then inquired where I was bound for, and on my telling him she was going to Russia he seemed to hesitate about sinking her as he said he loved Russia. The conversation continued until about midnight. . . .

(From the "Schiller" statement)

While I was in the Captain's room the Second Engineer came up, and after searching him to

see if he had any revolvers on him, I told him to sit down and make himself comfortable. I asked the Captain if he had any whiskey, as I was cold and had not had much to eat for five days, so the Captain gave me a bottle of whiskey and biscuits. After wishing one another good health we sat there for a couple of hours. . . .

(From Captain Bergner's statement)

At midnight he said that he was going to disable the wireless, and on hearing someone in the chart room he bound me on my honor not to leave the cabin saying that if I did he would shoot me on sight. . . .

(From the statement of the Second Officer Allen Maclurcom)

When I came on watch at midnight I passed someone outside the chart room, but it being dark, and thinking it was the Captain, I walked on into the chart room, where this party followed me, and told me to throw my hands up. He told me the ship was under German command, and not attempt to make any resistance as it would mean the sacrifice of the Captain's and Second Engineer's lives. He said if the ship had been going to England he would have destroyed her im-

mediately, but as she was bound for Russia he would probably spare her. Then he told me to walk ahead of him to the port-after-lifeboat, and get the axe, which was in the forward end of it. He then took me back to the Marconi room. . . .

*(From the statement of the wireless operator,
Alexander Dunnett)*

I was on watch in the wireless room when this man came along with the Second Officer. He held me up with two revolvers, and brought me along to the apprentice's room, together with the Second Officer. The latter told the apprentice, who acts as second operator, to come out. Schiller held him up, and told us both to go up to the chart room. . . .

(From the Second Officer's statement)

He then took me back to the Marconi room, and proceeded to demolish the installation, holding the revolver against my ribs. From there he went to the Chief Engineer's cabin and demanded his rifle, I accompanying him, and after obtaining it, threw it overboard. From there he made me walk ahead of him to the Chief Officer's cabin, who he disarmed whilst he was asleep. He then ordered me to the bridge to steer south-west by compass, and as I was going on the bridge the

Lieutenant George D. Barnitz, U. S. N.

Third Officer came down and he held him up, I going on the bridge in the meanwhile.

(From the Wireless Operator's statement)

Schiller came back again, and took us into the Captain's room. Some time later he came back again and brought me down to the wireless room to see if I could repair the wireless installation, which he said he had smashed. I told him it might be possible to repair one instrument, and he said, "We will leave it until morning," and then brought me along the deck to the Fourth and Fifth Engineers' cabins and I opened the door and he went in. Both engineers were asleep and he made me search all the drawers; he brought out a revolver and a box of cartridges, which he made me throw over the side. He then took me to the Third Engineer's cabin, and searched all the drawers there. He brought out of there a bottle of whiskey, and asked me if I had any money. Then he marched me up to the Captain's cabin and ordered me to remain there until 6 A. M.

(From "Schiller's" statement)

I went into the various officers' rooms and took all the revolvers from them. From the Steward I took ten dollars, and a two-dollar bill from the Second Mate.

(From the Second Officer's statement)

At 1:30 A. M. he returned to the bridge and ordered me to steer south by compass.

(From the "Schiller" statement)

Then I went to the Captain's cabin again, and told him I should sink the ship, but the Captain said he has worked since a boy on ships for a few shillings a week and he has worked himself up to this and surely it has not come to this. He said he has a wife and a child — a girl — and showed me on the wall the portrait of the child, and I asked him suppose the ship went down would he get another job, and he said he would have to work as a longshoreman. He said it was too rough for the boats to be lowered, so I did not want to commit murder. And knowing that the Captain would lose his position, and as I am a young man and can always find work, I asked the Captain if he will put me ashore in the morning. He gave me his word of honor that he would. . . .

(From Captain Bergner's statement)

At 5:30 A. M. . . . he let me take charge of the ship, and I made for Delaware Breakwater. . . .

(From the Wireless Operator's statement)

At 6 A. M. he told me I could go below, but

not to go into the wireless room. I was along near the carpenter's room when he was searching it, and he made me bring out an axe and took me to the wireless room again; there he told me to smash up one of the instruments, and he stood in back of me threatening me. I asked him then if that would do, after I had partly demolished the instruments, and he told me to leave the axe and lock the door, which I did. He then left me.

(From "Schiller's" statement)

When we sighted shore the Captain said that we would have to go straight towards the lighthouse, or else, if we went the other way (the way I wanted to) we should run ashore, so I left it to the Captain and trusted to his word, as he said he would land me. . . .

(From Captain Bergner's statement)

On approaching land he ordered one of the ship's boats to be manned, and said that he was going to take two of the ship's officers along as hostages to guarantee that I should not run him down, and he wanted three Chinese from the crew to row him ashore. . . .

(From the statement of John S. Wingate, Keeper of the Cape Henlopen Coast Guard Station)

At about 11:30 A. M. I noticed a steamship coming in from off shore. I said to the crew that it was a war vessel coming but I didn't know whether it was German or British. At 11:45 the lookout reported to me that the steamer was headed direct for Hen and Chicken Shoal. I immediately ordered the signal "J. D." hoisted on the pole, which means, "You are standing into danger." When we supposed the ship saw our signal, he stopped, and laid to for about ten minutes, when he hard a-port and went clear of the shoal.

A few minutes later he lowered a boat — we thought to take soundings, for the boat pulled away from the ship and headed direct for the beach.

(From the Second Officer's statement)

At approximately 11:45 A. M. . . . I got into the small boat at his command, with four of the crew, and we proceeded toward shore, but were stopped by the pilot cutter *Philadelphia* who told us that if we attempted to land we would be drowned. The *Philadelphia* then towed us into smooth water. . . .

(From Captain Wingate's statement)

Meanwhile the pilot boat was heading down on the ship, blowing her whistle to warn the ship of her danger. By this time the ship hoisted a signal "K. T. S.," which means "Piracy." I ordered my boat made ready at once when I saw the "Piracy" signal; five minutes later he started for the ship. At 12:20 I had called Keeper Lynch of the Lewes station telling him what I was going to do, and to meet me off the Point.

(From the statement of Captain John S. Lynch of the Lewes Coast Guard Station)

I and my crew launched our power lifeboat and started for the steamer. Before I could get to the steamer I saw the pilot boat towing in the steamer's skiff. The pilot boat let go of the skiff right off the Capes, and the occupants of the skiff started to row for shore. I called to them and they stopped. We went alongside, and I told them I would take the man ashore and save them the trouble. So he got into our boat.

I then run off and picked up Captain Wingate, whose boat is a rowboat, and we went alongside the steamer. I asked for the Captain of the steamer, and they told me he was going ashore in the sail pilot boat, so we run alongside the sail

pilot boat, and I asked the Captain of the steamer to come along with me. He says, "I will not. Not with *that* man in your boat. He's got five guns on him!" I then told him that I did not care how many guns he had as I was not afraid of him and he requested me to take the man ashore myself. Then this man Ernest Schiller began to throw his guns overboard: Schiller threw one gun overboard, Captain Wingate, who had come aboard my boat threw two overboard, and C. A. Jenkins threw another one overboard, Schiller having thrown them into the bottom of the boat. He, Schiller, threw a lot of cartridges overboard, and when we came ashore we searched him and took the balance of the cartridges which he had on him and threw them overboard. I then brought him up to the Customs Office and left him there.

(From "Schiller's" statement)

I am willing to go back to New York . . . immediately, and confess my guilt. I swear on oath that there are no bombs placed on the ship, to my knowledge. I simply made that statement to the Captain as a bluff.

Thus this venturesome Russian, Hodson by birth, Schiller by preference, and German by con-

viction, who single-handed captured a steamship, returned to New York, thirty-six hours after he had left port. He walked the plank to the United States Penitentiary at Atlanta for life, for "piracy on the high seas."

VI

ALONG THE WATERFRONT

I

Sugar and Ships and Robert Fay

Anyone familiar with the waterfront of a great port can appreciate its difficulties as an area to be policed. One of the busiest sections of the community during the daytime, it is little frequented at night. In districts where you find few people you will rarely find lights, and where there are no lights you may well expect crime. The contours of the shoreline are irregular, following usually the original margins of solid ground lining the natural harbor, and for every thoroughfare which can pass as a street there are a dozen or two alleys, footpaths, shadowy recesses and blind holes. Locks and keys and night watchmen will protect the land side of the piers, but from the water side entrance to any pier is easy, concealment still easier, and flight no trick at all.

If New York harbor in 1914 had presented

the aspect of the same harbor of twenty years before, I could hardly estimate the confusion which would have resulted from the coming of war. But there is probably no port in the world which handles New York's volume of shipping with greater orderliness — I speak now from the standpoint of "law and order" rather than of the terminal facilities of the port. Its waterfront was physically clean and its longshore population, thanks to a competent police force, manageable. And yet, as Shakespeare said, "there are land rats and water rats —"

From August, when war was declared and the Bomb Squad formed, through the fall of the year 1914, certain changes came over the waterfront. Great German liners of the Hamburg-American and North German Lloyd Lines, freighters of the Atlas Line, and a miscellany of other vessels flying the red-white-and-black lay idle in port when England's fleet blockaded the seaward channels. Some eighty German vessels were tied up at their piers. They dared not move, for Germany's only available convoys were in southern waters trying to dodge the British and prey upon shipping. The Hamburg-American Line and Captain Boy-Ed made several abortive attempts to supply the raiders, but the considerable merchant fleet

caught in port by the war stayed in port. This dumped on the longshore population some thousands of ardent Boches. Meanwhile the great steamship lines owned by neutral and allied capital entered on a period of activity such as they had never seen before. The first ships from abroad brought purchasing agents and European money to barter for American supplies, for immediate delivery. Any man who owned anything that bore a speaking likeness to a cargo-boat suddenly found himself potentially wealthy. The whole United States began to pour into the New York waterfront a huge volume of supplies for the Allies — and for a time for Germany, via neutral Holland and Scandinavia — and out of the Hudson and East rivers flowed a steady, swelling current of this overseas trade.

By the arrival of the year 1915 the current was well under way. The piers were extremely busy and the facilities for trouble were multiplying. On January 3 there was an explosion on the steamship *Orton* in Erie Basin for which there was no apparent explanation. A month later a bomb was discovered in the cargo of the *Hennington Court*, but no one could say how it came there. Toward the end of February the steamship *Carlton* caught fire at sea — mysteriously. Two

months passed, then two bombs were found in the cargo of the *Lord Erne*. We might have had a look at them, for that was the business of the Bomb Squad, if those who had found the bombs had not dumped them overboard rather hastily. A week later a bomb was found in the hold of the *Devon City*. Again no explanation. Nor any reasonable cause why the *Cressington Court* caught fire at sea on April 29. Our attention had been directed to each of these instances, and we had investigated, and folders waited in the files for the reports which properly developed would lead to an arrest, and the sum total of those reports was — nothing. Then our luck turned for a moment.

The steamship *Kirkoswald*, out of New York, laden with supplies for France, docked at Marseilles, and in four sugar-bags in her hold were found bombs. The French authorities commandeered them, and removed and analyzed the explosive charge. The police commissioner cabled at once to Marseilles requesting the return of one of the bomb-cases, together with the bag in which it had been found, and an analysis of the contents. No answer. So he cabled again. The bomb-case then began a journey back to the United States, presented with the compliments of

the Republic of France by M. Jusserand to the State Department at Washington, and forwarded in turn to Mayor Mitchel of New York. Our study disclosed that it was of a new type: a metal tube some ten inches long, divided into two compartments by a thin aluminum disc. One compartment had held potassium chlorate, a powerful explosive, and the other had contained sulphuric acid. The acid had been expected to eat through the thin disc separating the compartments, and explosion was to have followed, but for some reason it had failed. The metals were of good quality, and the workmanship was thorough.

Here was our first clue on the case. Many policemen work on theory so determinedly that they exclude really important facts which do not fit comfortably into the theory. I have always believed in taking the evidence, building a theory upon it, and then trying to confirm or reject that theory as new facts appear. It was well that we followed such a policy here, for we had nothing but the bomb-tube itself to build our theory upon. What did it offer? First, we were fortunate in having a bomb to study, for usually the fire following an explosion leaves no trace of its origin. We had its construction and ingredients

in Court

as real, if vague, clues. Second, we knew that the *Kirkoswald* had carried supplies to France, and that all of the vessels on which bombs had been found or fires had broken out, had also been carrying supplies to the Allies. The list, by this time, had grown, for there were three more ship cases of fires or bombs in May, one in June, and five in July. Our primary theory was, therefore, that the bombs were made and placed on the vessels either by Germans or their paid agents.

The *Kirkoswald* carried sugar. By examining the cargo-records of the other ships which had suffered near or actual mishaps, we found that they had also carried sugar, and that in the instances when fire broke out, the highly inflammable sugar gave a lot of trouble to the fire crew. The vigilance of the waterfront and harbor police had of course been keyed up to detect anything suspicious, but a bomb-planter does not often carry his bomb under a policeman's nose, and it seemed not unreasonable to suspect that the bombs had gone aboard with the sugar. So I went to a sugar refinery to see how sugar was made.

I followed the process from the entry of the raw sugar to the bagging and shipping of the finished product. All of the sugar shipped

abroad went in bags, which were sewn tight either by hand or by machinery. After considerable testing I found that it was fairly easy to open a hand-sewn bag and sew it up again without leaving evidence of what I had done; the machine stitches, however, resisted any intrusion, and were hard to duplicate once they had been taken out. I put that fact away for future reference and looked in on the shipping department, to learn there that the only two persons who could know of the destination of a consignment of sugar before it was actually loaded into a vessel's hold were the shipping clerk of the refinery and the captain of the lighter who took the sugar from the refinery to the ship.

So we first paid court to the lighter captains and their aids. We followed shipments of sugar from the refinery doors to the lighters, saw the shipping clerk hand over his bill to the captain, saw the lighter pull out for a pier somewhere about the harbor, followed him to the pier, and watched the transfer of the cargo into the vessel's hold. If a lighterman knew that hand-sewn bags could be ripped open, and wished to insert a bomb and close the bag again, he would have to do it on the way from the refinery to the pier — of that we were confident, for as soon as the lighter

pulled up to the vessel's side the stevedores rushed the cargo into the hold, the hatches were sealed, and the cargo-checker, employed by the vessel, turned over to the lighter captain his receipt for the consignment. There was apparently no other time for tampering with the bags.

How to watch the bags themselves from the refinery into the vessel was a troublesome problem. The river, during the daytime, is in constant traffic, and navigation for a cumbersome lighter in the river-paths is about as comfortable as crossing Fifth Avenue on foot at rush hour. The river at night was comparatively free, and it was then that most of the lightering was done. A waterman can identify the uncouth shapes of queer craft on dark waters, a landsman cannot, but we had to make the best of a bad bargain and chase the lighters in a motorboat, often diligently following a blinking light through the mist for hours to discover finally that it was on the wrong ship. Ships on a dark river are like timid spinsters in a dark street — they exhibit, perhaps through fear of collision, perhaps because ships are feminine, a strong suspicion of anything that approaches. Our barking motorboat advertised itself half a mile away. If we drifted we lost our quarry. We tried to smuggle men aboard the lighters,

but there were so many, and they were bound in so many different directions, that we were not manned for this.

So passed June and July. It was a thankless task, and one which had its risks. Detective Senff fell into the river one night when he was chasing a suspicious character around under a pier at the foot of West 44th Street and nearly drowned before he could be pulled out. The case seemed to be getting no further than abstractions. Ashore, however, we learned that most of the lighter captains in the harbor were Germans, and in an effort to reduce the field we learned the names of the captains of the lighters which had most frequently visited the vessels on which fires had occurred. This took time and an exhaustive study of lighterage receipts, but it brought out the fact that in every case of a delivery of sugar to an outward bound vessel, the captain of the lighter had returned a full receipt — which exploded the possibility that a lighterman might take a bag from one shipment, put a bomb in it, and add it to the next.

I am happy now to say that we did not give up. We couldn't, for the ship fires were going right on, increasing in frequency, and somebody was making bombs, for they continued to be found.

On the assumption that a lighter captain who would place a bomb in a sugar-bag must first get the bomb, we began to shadow the captains, not only afloat but ashore, and then suddenly the case took a queer twist and our theory of German intrigue got badly balled up.

We followed certain lightermen to their homes, their drinking haunts, and their other places of business, and among their other places of business found the residence — on the lower West Side of Manhattan — of a man known to be a river pirate. That was enough for an arrest, and on August 27 we brought Mike Matzet, Ferdinand Hahn, Richard Meyerhoffer and Jene Storms, Germans, and John Peterson, Swede, to headquarters for examination. Matzet confessed that he, and "all the rest" of the lighter captains, as he expressed it, had been regularly stealing sugar from the consignments, and selling it to river pirates for $\frac{1}{6}$ the market price, which allowed the pirates to re-sell it at $\frac{5}{6}$ the market for 400 per cent. clear profit. The pirates in a motor-boat would steal into the shadow of a lighter as she lay at her anchorage, take off a few bags, and slip away. We had seen such boats, but had never been able to close in and see what they were doing. The checkers who were supposed to

render a true and just account of the number of bags which later passed into the hatches of the ocean vessels were merely accomplices who shared in the profits when the stolen sugar was sold.

There were no bombs on the captains (who presently went to jail) but they were all fully aware of the conditions along the waterfront, for one said to a pirate who was "buying" sugar: "Take all you want — the damn ship will never get over anyway!" No bombs — and what if there had been? We were reasonably certain that the ships were being fired, but we did not know now whether it was for German reasons, or merely to efface the sugar thefts before the cargoes reached the other side of the ocean and were discovered by the consignees. The conviction of the thieves was not much consolation for the slow development of the case, and it fixed no guilt for bombs.

But when you are bound on a long trip, and you have mislaid your ticket, it is second nature to go through your pockets one by one, knowing full well that it is not in any of them, for you "just looked there." Then you find it in one of the pockets where you knew it could not be. Acting on a not dissimilar instinct we began to retrace our steps from June to September, and

to follow again the progress of sugar from the refinery to the hold of the outward bound steamer. Our theory that the bombs had some connection with the sugar was either to be proven or destroyed this time. It was in this more or less dull review that we made the acquaintance of the Chenangoes.

They were nothing more romantic than fly-by-night stevedores whom the lighter companies engaged at the sugar wharves to load cargoes. They worked by the day, or by the job, there were always plenty loitering around to be hired, and they drew their pay and went their way. No one ever had to wonder who they were or where they came from, for a stout body was all the recommendation a Chenango required. They were a nondescript type of common labor, the same, I suspect, that carried materials for the Tower of Babel, and speaking almost as many tongues. The same face rarely appeared a second time to be hired — not that there was anything particularly unpleasant about the work, but rather that all work is repulsive to a Chenango. He is the hobo of labor and if the same man had been re-hired, no one would have noticed or cared. We paid such attention to them as their variety permitted — followed them to all the points of

the compass, and watched them closely while they worked, to see whether any of them seemed to linger aboard in the cargo, or carried any suspicious package. . The wickedest thing we found was an occasional pint flask on the hip, which was no proof of any special criminal affairs.

Ever since we had examined the *Kirkoswald* bomb we had had lines out to follow the sale of chlorate of potash and sulphuric acid — the ingredients of the bomb. We examined reams of sales' records submitted by explosive and chemical manufacturers, traced dozens of reports from drug stores, and found nothing of consequence. Those two substances are widely and harmlessly used, and rarely purchased in small quantities by any individual whose intentions might excite suspicion. Under our rigid city explosives' laws investigation of purchases was facilitated for us, but all the facility in the world could not help the case without anything to investigate. So passed September and a part of October, and just about the time when the bomb case was growing dull and the ship fires which were constantly occurring had almost found us calloused, the French Government, with traditional courtesy, helped us out again, and blew our sugar theory into many and small pieces.

The Fay Bomb Materials

Suit cases containing an atlas, two maps of the harbor, drawing instruments, tools, a wig and two false mustaches, a telescope bomb, and several packages of ingredients

Captain Martyn, the French military attaché in New York, telephoned to say that he thought we would be interested in a man who he believed was trying to buy some explosive. What kind? Trinitro-toluol, or "TNT," one of the most violent propellants used in modern shell. Yes, we would be interested.

A war exporter, Wettig by name, had told Captain Martyn that a fellow with whom he shared office space had asked him to obtain a quantity of TNT — a small quantity, for trial purposes. The purchaser, who was known both as Paul Siebs and Karl Oppegaarde, and who lived at the Hotel Breslin, directed Wettig to deliver the material to a Jersey address and said he would then receive payment. On the axiom that a bomb in the hand is worth two in someone else's, we were introduced to Wettig, and formulated with him a plan to follow the explosive. So on Thursday, October 21, Detective Barnitz accompanied Wettig to a "dynamite store" at Perth Amboy, New Jersey, where the latter bought some 25 pounds of TNT. The two returned to New York with their package. We looked up Mr. Oppegaarde and asked him what he proposed to do with his purchase. He said he really hadn't the slightest idea: an acquaintance of his, a war broker named Max

Breitung, had referred a certain Dr. Herbert Kienzle, a German clock-maker, to him as a likely person to obtain explosives. Dr. Kienzle had placed the order, had wanted it delivered at a garage in Main Street, Weehawken, to a man who bore the name of Fay, and who had assured Siebs that when he had it delivered he would be paid for his services. Further than that he knew nothing. Nobody seemed to know anything, although here was a considerable amount of vicious explosive in which five men were very much interested. We spent the rest of that day in looking up what we could of the players in this little game of "passing the TNT"—from Kienzle to Breitung to Siebs to Wettig to Fay.

Six men were assigned to the case: Murphy, Walsh, Fenelly, Sterett, Coy and Barnitz, and they most admirably stayed on the job. On Friday Detectives Barnitz and Coy took the explosive to the Weehawken garage. Fay was not there, but a man who was there told the detectives he lived at 28 Fifth Street, so the men from the Bomb Squad and their package called at the boarding house where Fay lived. Again he was not to be found, but our men had a chat with the landlady, who told them that Mr. Fay was a real nice gentleman who had lived there with his friend Mr.

Scholz for a month, always paid his bills, subscribed to a magazine, and was working on inventions, or at least so she thought, because he used a table to draw plans on. Sociable, too —

They left the TNT for him. I ought to remind the reader that it is harmless unless confined or heated, and cannot be properly exploded without a proper detonating charge. It may have been a bit rough on the boarding house, but we had gone to deliver the goods to Fay; Wettig had told him they would be delivered (though not by whom) and we had to carry out the plan even though Fay was not at home.

At the same hour, across the Hudson Detectives Coy, Walsh and Sterett learned why Fay had not been receiving visitors, for they found him in Siebs's company in the Hotel Breslin. Effacing themselves until the interview was over, they tailed Fay to the West 42nd Street ferry, then across the river to Weehawken, up the long hill to the town, and to his garage at 212 Main Street. In the early evening an automobile emerged from the garage, driven by Fay and containing another passenger, and wound out of town in a northerly direction along the Palisades. Behind it was a police car. North of Weehawken a few miles where the country is inhabited by installment-plan

"villas," moving-picture studios and scrub-oak trees, Fay stopped his car at the roadside and disappeared with the other man into the underbrush and then into the deeper woods. The police car waited until they returned, and followed them back to their boarding house, where the detectives took up a vigil outside.

A New York policeman has not the power of arrest in another state, and it began to look as though we might have to make an arrest in Jersey, so Chief Flynn assigned Secret Service Agents Burke and Savage to the case and they joined forces with us Saturday morning. Detectives Barnitz, Coy, Walsh, Sterett, Fenelly and Murphy were watching the house in Weehawken. About noon Fay and his companion appeared, and got aboard a Grantwood street-car. The Bomb Squad followed at a discreet distance to the point where the men had dodged into the woods the night before. Barnitz, who was in command, sent Sterett and Coy in after them. But nature was against us, for the fallen leaves carpeting the woods crackled under foot, and to snap a twig was to shout one's presence through the clear air. Twice Fay turned sharply around and peered through the trees. The two detectives were nearly discovered on both occasions. They

finally decided that it would be impossible to approach their men without alarming them, so they returned to the waiting automobile. The police party waited an hour or more, and then realized that Fay and his companion had evidently gone out the other side of the woods and so worked their way back to civilization.

Barnitz thought and acted swiftly. He sent Sterett and Coy at once to New York to cover Dr. Kienzle, on the chance that Fay might get into communication with him — it was a long chance, but the only one that offered, for the men were now lost to us. Barnitz, Murphy, Fenelly and Walsh returned to Weehawken to watch Fay's house. For two hours nothing happened to interest them, and Barnitz was beginning to wonder whether he would ever see his quarry again when an express wagon drove up and stopped at 28 Fifth Street. The driver presently trundled a trunk out of the house, swung it up into his wagon and drove off. The police car idled along behind him for a mile or so through the Weehawken streets, and the wagon stopped at another house. While the driver was indoors this time, Fenelly, who was roughly dressed and light of foot, slipped up behind the wagon, vaulted into the back of it, took one look at the trunk and

rejoined the others. "There's a plain calling-card on the trunk. It reads 'Walter Scholz,'" he said. Again the expressman headed a small parade, which terminated when the detectives saw him leave the trunk in a storage warehouse. Barnitz dared not follow it there for fear of arousing suspicion, and he figured that the trunk would probably not be removed during the week-end at least. The detectives once more returned to the boarding house and resumed their tedious watch.

The evening passed, and there was no word either from Coy and Sterett or the lost men. Late fall evenings in Weehawken are cold. Some time after midnight two figures came up the street, and as they turned in to the boarding house we saw they were Fay and Scholz. Out of the shadows a moment later Sterett and Coy slipped up to the car—"I could have kissed 'em both," Barnitz said afterward. They had covered the office of the Kienzle Clock Company at 41 Park Place, picked up Dr. Kienzle as he left the office, tailed him until five in the afternoon, and then saw him enter the lobby of the Equitable Building at 120 Broadway—where he met Fay and Scholz! The men conversed for a few moments, and Fay excused himself. He went to a telephone booth and closed the door. Sterett

went into the next booth. Through the thin partition he heard Fay call the garage, ask whether a package had been delivered to him there, then say "it hasn't, eh?" and hang up the receiver. He rejoined Scholz and Kienzle and the three went to a Fulton Street restaurant to dine. The detectives went to the restaurant but did not dine, and when the Germans left, and Kienzle parted from the others, they tailed Fay and Scholz to Grand Central Palace, saw them appropriate two young women, dance with them, pledge them in a few drinks, and finally leave them and return to Weehawken.

That trunk episode made us uneasy. It might have meant that they had been frightened and were going to disappear, and it certainly signified their intention of moving. We decided to force the issue, and accordingly in the small hours of Sunday morning we directed Wettig, of whom, of course, Fay had no suspicions, to call at Fay's house later in the forenoon to arrange to test the TNT. From the automobile, which was parked at the street-corner some distance from the house, the detectives saw Wettig enter, and in a few moments saw him come out-of-doors with Fay and Scholz. They strolled to the street-car line, allowed two cars to pass unsignalled, and then,

suddenly, hailed a third. It had closed doors, and when Murphy, Fenelly, and Coy, seeing the men climbing aboard, tried to reach the car themselves, the doors had slammed in their faces and the car was on its way. Somewhere in the shuffle Walsh had been mislaid — he had been last seen up the block covering an alley which led back of the boarding house. There was no time to pick him up, and the automobile followed the car to Grantwood and the now familiar woods. At times the car was out of sight of the pursuers, and they fully expected to lose their men again. But from far in the rear they saw the car stop opposite the woods. The doors snapped open, and the first person to set foot on the ground was Walsh. The second and third were Fay and Scholz, and the last, Wettig. Walsh had seen them climb aboard in Weehawken, and had promptly sprinted for the next corner ahead, where he caught the car! That was good shadowing technique.

The Germans slipped into the protection of the underbrush immediately. Barnitz was not disposed to let them get away again, so he spread out his forces so as to follow the party and finally surround it, and the Bomb Squad, the Secret Service and two members of the Weehawken police entered the wood and wove a circle about their

victims. As they closed in they saw Fay enter a little shack in the depth of the brush, and bring out a package, from which he took a pinch of some material and placed it on a rock. With a nice new hammer he dealt the rock a sharp blow, there was a loud report, and the handle snapped in his hand. The detectives closed in at once, and Barnitz said, "You're under arrest!"

"Who is in charge of you all?" Fay asked.

"I am," Barnitz replied.

"Well, I will tell you that I am not going to be placed under arrest," Fay announced. "If I am, great people will suffer! You will surely have war. It cannot be—it is impossible. I will give you any amount of money if you will let me go."

This was good news, not for its financial content but because we had no previous evidence against this man Fay save that he had TNT in his possession. Here he was, trying to confirm our suspicions.

"How much will you give me?" Barnitz parleyed.

"All you want—any amount!"

"Fifty thousand?"

"Yes, fifty thousand, if you want it."

"Got it with you?" Barnitz asked instantly.

"No, I haven't got it all, but I can get it. I'll pay you a hundred dollars now as a guarantee, and I'll give you the balance at noon tomorrow."

Barnitz called two of the other men. "Get this," he said, and turning to Fay: "All right, where's your money?" Fay paid him. Then they took him to the Weehawken headquarters, guilty at least of attempted bribery, and Barnitz turned in the cash as Exhibit A.

We suspected that he had something more than the possession of explosives to conceal, and so he had, for a search of his rooms and the garage brought to light the parts for a number of thoroughly ingenious mechanical contrivances which, although they were of a new type, we immediately recognized as bombs. In a packing case at the storage warehouse were four bombs finished and ready to fill. He had apparently intended to manufacture them on a large scale, for in addition to his trial quantity of TNT Fay had twenty-five sticks of dynamite, 450 pounds of chlorate of potash, four hundred percussion caps, and two hundred bomb cylinders. Apparently, too, he had German sympathies, for we found in his rooms a regulation German army pistol, loaded. The discovery of a chart of New York harbor, and the

information, which we soon got, that he had a motorboat in a slip opposite West 42nd Street, pointed the finger of guilt toward the waterfront — which after all those months of waiting was the direction in which we were most interested.

Fay told his story. He was a lieutenant of the German Army, detached for special secret service. He ascribed his detachment from his command to his own brilliant realization, as he was on the fighting front in France, that if all the American shells that were being fired at him from French seventy-fives and British eighteen-pounders could be sunk before they reached France they would not cause his countrymen so much annoyance, and also that pushed to its capacity that idea would probably influence the outcome of the war. The fact is that Fay's career, training, education, languages and character were well known to the secret service in Berlin, and that when they wanted to assign a reliable and desperate man to Captain von Papen in New York, they sent him. They knew that Fay had spent years in America, and that he was trained in mechanics. They gave him \$4,000 and a plan of campaign, and said: "Go west."

It was natural that when he landed he should seek out his brother-in-law, Walter Scholz, who

was working as gardener on an estate in Connecticut. It was natural, too, that when he set about getting supplies for his bombs he should call on Dr. Kienzle, who made clock machinery, for Dr. Kienzle had already written to the German secret service in Berlin recommending just such work as Fay had come to undertake. When he came to require explosives, it was only natural that Kienzle should refer him to his friend Max Breitung, with the result which we have seen, and naturally Paul Daeche, who was a good friend of both Kienzle and Breitung (he had tried to return to Germany with both of them on the *Kronprinzessin Cecilie* when she put out of New York and put in to Bar Harbor in late July, 1914) — naturally Daeche was interested in Fay's projects and devices, and helped him with them. Daeche was one of those doubtful Germans who had come to America to "study business methods" — in short a commercial spy, willing to make a living.

Fay was crestfallen after his arrest. He worried, first, over what his government would think of him when he had left home promising that not a single munitions' ship would leave New York and reach the Allies; second, because revealing his commission to destroy those ships would place

Lieutenant Fay's Motor Boat

Germany in a bad light with other neutral nations; third, for fear he might implicate the Imperial German Embassy at Washington. He protected the Embassy for a time, and then admitted that his plans had only been waiting a word from von Papen and Boy-Ed for consummation. His mines were all ready to be set, and the attachés, whom he had met, had not given the word. All his clever craftsmanship had gone for nothing.

The bombs were so constructed that they might be attached under water to the rudder-post of a vessel as she lay at her pier. Inside the bomb case was a clockwork, so poised as to fire two rifle cartridges into a chamber of ninety pounds of TNT. Lieut. Robert S. Glasburn, of Fort Wadsworth, who testified at Fay's trial, is my authority for the statement that the government requires only 100 pounds of TNT, exploded at a depth of fifteen feet under water, to destroy a dreadnought; Fay's ninety pounds would have torn the rudder out like a toothpick and ripped away the entire after part of the vessel. The helmsman of the vessel himself was unconsciously to have set the bomb off, for the clockwork was geared to a wire attached to the rudder itself in such a way that each normal swing of the rudder would wind up the mechanism until it fired the cartridge. The

bomb chamber was fitted with rubber gaskets so that no water would be admitted before the charge had done its work. Fay was a skilful hand, and had done the assembling himself. Scholz bought the materials at various machine shops about New York, Kienzle supplied the mechanisms and approved the finished product. Breitung contributed 400 pounds of chlorate of potash to make a German holiday, and Daeche just hung around and helped everybody.

Fay knew it was easy to approach a pier from the water-side, for he had spent hours fishing idly in the river to determine that very fact. Just as soon as the military attaché said the word, he and Scholz were to put out into the darkness of the river in their fast motorboat and visit ten ships sailing for England and France, donning a diver's suit, and attaching a bomb to each rudder. He would first slip alongside the police patrol boats, whose haunts he knew, and steal the guns from them, counting on the swiftness of his own craft to get away from pursuers. He even entertained the possibility of visiting the British patrol cruisers outside the harbor to fix bombs to them — though hardly seriously, I suspect. He had made a different type of bomb, resembling a telescope, in which the carefully timed dissolution of a white

powder would release a firing pin on a large quantity of potassium chlorate. This type he proposed to smuggle into the cargo. When he had created such a reign of terror in New York harbor that no ship dared leave, he would go to Boston and Philadelphia and do likewise, then to Chicago and Buffalo to paralyze lake shipping, and thence to New Orleans and San Francisco and home by way of New York or Mexico. It was a great pity, he said, that he had been arrested, for this program had been cancelled. He wished he had got word to start sooner. He had had a few bombs ready for some time. Then there came a slack period, and he sent Daeche to Bridgeport on a little side mission for Germany: to get some dum-dum bullets. These Fay intended to forward to Berlin through von Papen to support a protest from Germany to the United States that we were shipping dum-dum bullets to the Allies. We were not, naturally, but that did not prevent his bringing back a few bullets with the jackets carefully notched by a German agent in Bridgeport.

We had heard enough of what he had intended to do, and of his disappointment. What had he accomplished? What ships had he blown up? Was he responsible for the five fires in the

hold of the *Craigside* on July 24? No. Did he make the bombs found on the *Arabic* on July 27? Did he cause the fires on the *Assuncion de Larinaga*, the *Rotterdam* or the *Santa Anna*, and did he put a bomb aboard the *Williston*? He did not, he assured me.

I showed him the *Kirkoswald* bomb.

“Did you ever see that?”

“No,” he answered.

“Didn’t you make that?”

“I did not,” he replied, and laughed. “That’s a joke. I see now why they sent me over to this country — they wanted someone to make bombs that would do some damage. That’s crude work.”

His answer was truthful. We had to admit it for there was absolutely no evidence to connect him with any specific act outside his confession, and we had to find comfort in the fact that he was guilty at least of having intended to continue the reign of terror along the wharves. Bombs had been found or fires had broken out on no less than twenty-two vessels bound out of New York up to the time we closed on Fay — and not one was his prey. He was tried with Scholz and Daeche. The only law then applying to his case, and the one under which he was tried,

The Rudder Bomb

A Closer View of the Rudder Bomb

charged him with "conspiracy to defraud the insurance underwriters" who had insured cargoes on certain ships. When the charge was read to him, Fay innocently asked: "What are underwriters?" He found out. Fay went to Atlanta for eight years, Scholz for six, and Daeche for four. Kienzle and Breitung were not brought to trial and after we went to war were invited to join various other Germans in an internment camp. Fay had been at Atlanta a month when he escaped. German friends gave him clothes and helped him to Baltimore, where Paul Koenig met him and paid him \$450, with injunctions to go to San Francisco and get more. For some reason the fugitive feared that there was a plot against his life in San Francisco, although he had protected the "great people," so instead of going west he fled immediately to Mexico. From there he fled to Spain, and it was not until the summer of 1918 that he was caught there.

He was a bold and important criminal in his field, and we were glad to have brought him in. He was not the one we wanted most, not if our sugar theory was sound. The pursuit of Fay had certainly scared that theory up an alley. It was high time we got out of the alley and back into Main Street.

VII

ALONG THE WATERFRONT

II

“Damn Him, Rintelen!”

The pursuit of Robert Fay unearthed what trial lawyers delight in calling “not one scintilla of evidence” that he had actually set fire to a ship. Fay was punished for what he intended to do and not for any real achievement for the German cause.

Yet the thought persisted in our minds that he knew who was making and placing ship bombs. He professed ignorance. “I do know this much,” he said, after a long session of futile questioning, “I do know that a certain man paid another man \$10,000 to make those bombs. I won’t tell you who he is, because I think he is now a prisoner in the Tower of London, and he might get into more trouble. You can make what you like out of that.”

We made this out of it — that the prisoner

then in the Tower to whom Fay referred was probably Franz Rintelen. He was a German of prominent station who had had a vision quite like Fay's — a vision of interrupting American shipping, and so damming the flood of war supplies. In early 1915 he had come to America equipped with plenty of authority and a bank credit limited only by the resources of the German Empire, and had spent six months here trying to exercise that authority and spend the money in numerous ways. He had tried to buy rifles of the American government, he had fostered peace demonstrations, promoted strikes, lobbied for an embargo on munitions and made himself busily useless in numerous other ways, only to sail for home in the fall of the year — and fall into the hands of the British.

But the charges which I have just cited, and which are now fully confirmed against this man, were not then known to us, and Fay's tip was too ambiguous to help us at the moment. Instead of ceasing after his arrest, the fires continued. The day after we caught Fay in the woods the steamer *Rio Lages* which had sailed a few days previously took fire out at sea. A week later a blaze started in the hold of the *Euterpe*. The *Rochambeau*, of the French line, caught fire

at sea on November 6, and the next day there was an explosion aboard the *Ancona*. The *Tynningham* suffered two fires on her voyage east during early December. There was a maddening certainty about it all that suggested that every ship that left port must have nothing in her hold except hungry rats, parlor matches, oily waste and free kerosene. Never in the history of the port had so many marine fires occurred in a single year. Marine insurance was away up and our patience was away down.

The steamship companies put on special details of guards to watch the vessels from the moment they entered port until they sailed again. We resumed patrolling the river in various disguises. Fay's swift motorboat had disappeared, but there were plenty of others, and the men of the Bomb Squad suffered real hardship in all sorts of inclement weather. It seemed as though every item of cargo was watched as it passed into the hold, and every stranger about the piers carefully followed, but there was absolutely nothing to excite suspicion. So we returned to our sugar theory and the Chenangoes.

I mentioned the fact that they were a floating tribe in more senses than one, and that the same man rarely came back twice for employment. A

few familiar faces, however, could occasionally be spotted in the crowd at work loading the lighters. We made it our business to study these steady workers and found them for the most part a harmless lot of Scandinavians.

Those who came, worked once, and vanished, were of all nationalities, with a considerable German representation. Some of them used to come from Hoboken, and by a process of elimination we found that certain of the Hoboken delegation were sailors from the idle North German Lloyd and Hamburg-American ships. We followed them and asked enough questions about them to learn the entire history of any civilized people, but nothing in the form of legal evidence resulted. A friend who knew the methods taught in the Wilhelmstrasse for destroying property said it would be futile for us to follow those men anyway, for the destroying agent himself rarely knows the men higher up, the real conspirators. So it began to look as if even the arrest of a guilty Chenango would not supply the background necessary to picture the bomb system in its entirety.

On one of the early days of 1916 Detectives Barth, Corell and Senff reported for duty and were assigned to Hoboken. They were in-

structed to hang about the restaurants, saloons and hotels where the officers and petty-officers from the German ships were accustomed to gather, and posing as confidential German agents they were to fish about for whatever might take their bait. All three men are fine Americans of German descent, with an excellent command of the German language, so they got on well with the longshore folk they met in the "stubes" of Hoboken. They occasionally suggested in a vague way that they were the picked servants of the Kaiser, and aroused some interest and no suspicion among their new acquaintances. Every man has more or less desire to be a "secret service man" and in looking back on the German antics in America during the war I think one may attribute as much of their activity to the dramatic instinct, as to their cupidity or their real patriotic zeal. (Paul Koenig is an exaggerated example of what I mean.) And so it was with those to whom the three Bomb Squad men talked: a nod here, and a wink there, a whisper and a wag of the head, and they took on some importance.

Their reward came when a German whom Barth had picked up suggested quietly that he knew a man who had been doing work for the government (German) and wouldn't Barth like

Franz Rintelen

to meet him? Barth would. So with some ceremony Barth was introduced as one of von Bernstorff's special agents to a funny little old man who looked like a cartoon of the late Prussian eagle. He was Captain Charles von Kleist of Hoboken. The three lunched together in Hahn's restaurant, in Park Row, New York, and von Kleist found Barth agreeable. He was very glad to meet a real agent, for he had a grudge against a fellow over in Hoboken who said he was a member of the German secret service.

"You can't be too careful of those fellows," Barth said. "There are a lot of fakes around. What's he done to you?"

"This Scheele, he has a laboratory, where he has been doing work, making some things. I was his superintendent now for a long time, and he owes me several hundred dollars, but he does not pay me. I think von Igel ought to know about it, and perhaps Captain von Papen himself."

"So do I," said Barth. "I'll see that it gets to him. What was it you were doing over there?"

Von Kleist was a chemist. Dr. Walter T. Scheele had been employing him in his laboratory at 1133 Clinton Street, Hoboken, in a factory

which was ostensibly for the manufacture of agricultural chemicals. The real business they transacted was the manufacture of bombs. Ernest Becker, the chief electrician of the North German Lloyd liner *Friedrich der Grosse*, and Carl Schmidt, her chief engineer, had made the containers out of sheet metal. These Becker had delivered to Scheele, and up in the laboratory the containers had been filled with explosive. Becker would come then and take them away, and the bombs had been used to great advantage, von Kleist continued, in harassing the shipping. But what good did it do him, he asked Barth, if he got no pay for it?

"You wait," returned the "secret agent." "I'll get you fixed up. I know a man who is close to von Igel, and I'll have him meet you. If what you say is true, you certainly have something coming to you. Wait till I get this other man."

A few days passed. Then von Kleist came again to Hahn's restaurant, and was introduced to "Herr Deane," who Barth said spoke no German, but was a good man in spite of the handicap. A trace of suspicion crossed the old chemist's face, and Barth hastened to add: "We have to use all kinds of people to fool these stupid Yankees,

see?" This bit of heavy satire reassured von Kleist, and he found Deane a likable person, who seemed interested in his case against Scheele. He went over the ground again. "If you want any more proof I'll show you," he concluded. "Come to my house." "Deane" (who votes under the name of George D. Barnitz, of the Bomb Squad) joined Barth and accompanied von Kleist to his house at 1121 Garden Street, Hoboken, and out of the muddy back yard the old man dug up an empty bomb container, *almost an exact duplicate of the "Kirkoswald" bomb!* "There is one of them — and I have filled dozens like that," he said.

"Let's go for a ride," Barth suggested. "We can go down to Coney Island and have supper — the hotel has opened up — and we'll talk things over." The old man felt very amiable towards his new friends, and was a talkative and appreciative guest. They dined at the Shelburne and later Barnitz wrote out a statement of von Kleist's services as the latter outlined them. "This is just for the sake of regularity, you understand. I have to have a written report to give to the chief, or else you won't get yours. You can sign this as your formal statement."

"All right," von Kleist agreed, and signed.

“How long do you think it will be before I could get some money?”

“Oh, don't worry about that part of it,” Barth said. “I tell you what we'll do. We'll all three go up to see the chief now — I want him to meet you anyhow, and you can supply any more facts that we may not have down.”

So they came up to my office — not von Igel's. Barnitz and Barth said his expression changed when he entered headquarters and knew he had been betrayed. He said, “I see now why you have been so good to me.”

The prisoner was docile. He said he knew he was caught and he wanted to help us round up the rest. I showed him the *Kirkoswald* bomb, and told him where it had been found. “Yes,” he said, “Captain Steinburg and Captain Bode came to the laboratory after they saw in the paper that the bomb had been found in Marseilles and they gave Dr. Scheele the devil because it had not gone off. It was supposed to explode within four days, but it didn't explode in twelve.” “How many did you make?” I asked. “I don't know how many,” the prisoner answered. The ones that were put on the *Inchmoor* and the *Dankdale* went off all right, and there were two fires on the *Tynningham*. “I gave one box of thirty

Henry Barth, U. S. Army, who posed as the German Secret Service agent in the von Rintelen ship bomb cases

of them to two Irishmen from New Orleans, O'Reilly and O'Leary. They took them down there to set fire to ships with them."

"Did you give the rest to Becker?"

"Yes. And he gave them to Captain Wolpert. Wolpert is superintendent of the piers of the Atlas Line over in Hoboken. Captain Bode, he is also a superintendent, for the Hamburg-American Line. Captain Steinburg I don't know much about, but he is in Germany now."

I thanked him for his information, and asked him if he would tell me everything about the plot, from its beginning up to the moment. He said he would; that he was going to help the United States now. I excused myself for a moment and left the room.

Von Kleist saw an electrician in a rough shirt and overalls repairing the lights in the room, and struck up a conversation with him. The electrician's English carried a slight German accent, and von Kleist said:

"Sie sind deutsch, nicht wahr?" (You're German?)

"Ja," replied the workman.

Still using the mother tongue the prisoner asked the workman to do him a favor. "Deliver these notes for me, will you? I can't go out of here,

and I would like to send word to some people." And he wrote on two messages, one addressed to Wolpert and Bode, the other to Schmidt and Becker. The substance of both was the same: "Beat it — I'm pinched." Detective Senff had been disguised as an electrician and stationed in the room for the express purpose of getting any statement the prisoner made — a practice not usually necessary, but this was a serious case. Evidently von Kleist's profession of transferred loyalty to the United States was only a scrap of paper. We locked him up.

That night Walsh and Murphy watched Captain Bode's house in a New Jersey suburb, while Sterett and Fenelly covered Wolpert's house nearby. Both men reported at their respective piers for work the next morning, and both were invited by the detectives to come over to headquarters "to consult with us in a little waterfront investigation we were carrying on." Senff went to the North German Lloyd piers to call on Becker. The guard at the pier-head put through a telephone connection, and Senff told Becker he wanted to see him on an urgent matter. Presently Becker appeared at the pier gates, and through the bars Senff whispered: "Von Kleist wants to see you. Trouble —" Becker returned

in an instant with his hat and came to headquarters. A little later in the day the net caught Schmidt, and after a year and a half of waiting we had rounded up in twenty-four hours five promising prisoners.

Von Kleist, we knew, was not altogether reliable; Bode was positively robust in his denial of any knowledge of the affair. Becker, a thin blond youth, made a complete confession. Yes, he had made the bomb containers — several hundred of them, under Schmidt's orders. He had filled them with chlorate of potash and sulphuric acid at the Scheele laboratory and had seen Captain Wolpert take them away. At that moment Wolpert, a hulking red figure, who had been conversing fairly freely, shut up tight, and refused to answer further questions. Becker acknowledged that he had made the *Kirkoswald* bomb, and added that the later cases were larger than that.

"Captain Wolpert," I said, "don't you think you're doing Germany more harm than good by doing this sort of thing?"

"Damn it!" he exploded. "I gave it up June first. But you've got to do what those bull-headed fellows tell you, haven't you?"

"Did you know Robert Fay, Captain?" I asked.

“ Yes — I met him one time in Schimmel’s office with Rintelen,” he replied.

“ You mean *von* Rintelen? ” I asked, using the aristocratic prefix which Rintelen had assumed.

“ No! ” bellowed Wolpert. “ Not *von*, damn him — *Rintelen!* ”

The result of our first examination of the four was the arrest of Carl Schmidt, chief engineer of the *Friedrich der Grosse*, and three of his assistants, Georg Praedel, William Paradies and Friedrich Garbade. We covered the laboratory, but Dr. Scheele had fled, to Florida. There he received a telegram telling him it was safe for him to return to New York. He had traveled as far as Baltimore when another telegram informed him of the arrests, and he fled to Cuba, and it was March of 1918 before he was arrested by the Havana police and extradited to New York. The laboratory was in a secret room on the top floor of the factory, accessible only through a trap door, and the trap itself was pierced with eyeholes so that anyone at work inside could see who was outside. We found a rich store of explosive and incendiary chemicals — all the ingredients of the bombs, which Lieutenant Busby brought back as evidence. Scheele was a finished chemist, and a German spy of 23 years’ standing.

**Captain Charles von Kleist (left)
and Captain Otto Wolpert (right)**

It had never occurred to him that von Kleist would squeal for want of money. "How good a German are you?" he had asked von Kleist when he engaged him in March, 1915. (The first project of the two was to saturate fertilizer with lubricating oil and thus smuggle the oil into Germany.) "I'm as good a German as you ever pretended to be," von Kleist answered. "You are not," said Scheele, "or you wouldn't have taken out naturalization papers here. I didn't do that." "Well, I couldn't have got my captain's sailing license if I hadn't," said von Kleist.

Loyalty to Germany alone had not satisfied the appetite of von Kleist, for he had caught a glimpse that night of the check for \$10,000, signed "Hansen" which Scheele proudly waved as evidence of what Germany thought of his ship-destroying ability. In the Austrian-subsidized Transatlantic Trust Company, where von Rintelen had deposited a large amount of money on his arrival from Germany, he had an account in the name of Hansen. Here then was the explanation of Fay's remark about his friend who was a prisoner in England.

So far, so good. We knew that Becker, Schmidt and the other engineers had made the bombs, and that Becker and Scheele had filled

them. On the evidence the four were convicted; Becker and von Kleist were sent to Atlanta for two years, and the other four to the penitentiary for six months. We were satisfied, but could not prove, that Wolpert and Bode had disposed of the bombs where they would do the most damage. They refused naturally to convict themselves, were admitted to bail of \$25,000, which was provided by friendly Germans, and were interned when we went to war. The four assistants served their terms and then were extended the privileges of internment camps as dangerous enemy aliens.

So far, so good, but the snake was not yet dead — we had only cut off a section of his tail. To be sure, he could not get about with his former vigor. The ship fires, which had continued through February, stopped, and one can count on his fingers the fires that broke out on ships after that date. Our theory had served its purpose — but who were the men higher up?

When Paul Koenig had been taken into custody in late December, 1915, we had found in his house in West 94th Street an address book containing some hundreds of names of folk with whom he apparently did business. The memorandum book is mentioned elsewhere in this volume in detail, but the present case may show just what specific

use we made of the catalogue of spies which the obliging Koenig had left in our hands. Among other entries was this:

“Boniface during the day — 3396 Worth
— ask for
Boniface at night 1993 Chelsea — Never
home until 10:30 P. M.”

We had gone systematically through the book, checking up our knowledge of each person mentioned, in order to see whether the trail of Koenig, von Papen, Boy-Ed and the Hamburg-American interests might not lead us to other unexpected outrages, and so we were seeking this Boniface who was “never home until 10:30 P. M.” For months he proved elusive, but not long after the arrest of the Hoboken bomb-manufacturers we located a certain Bonford Boniface.

He had only a single room for lodgings, and we called there one day while he was known to be elsewhere and made a careful examination of its contents. Our first signal that Boniface might be off-color was the discovery of a file of clippings from newspapers describing the arrest of von Kleist and his crew. Apparently he was interested in German bombs. There was no evidence of the reason for his interest, however, and the de-

tectives were about to leave the room as they had found it when they ran across two letters signed "Karl Schimmel," one postmarked Buenos Aires and one from Holland. Both were colorless messages asking how fortune was treating Boniface.

Now a cat may look at a king, and a man may receive friendly notes from the Argentine and Holland without molestation, but I recalled something of this name Karl Schimmel. He had come under suspicion before, first, when the so-called "Do-Do Chemical Company" of 395 Broadway had applied to the fire department for permission to store dynamite on the premises of its executive, Karl Schimmel, at 127 Concord Avenue, the Bronx. The application had been denied, and the fire department had asked the Bomb Squad to look up the Do-Do Chemical Company and its officers. It had no factory, no visible business, and as we presently found out no Karl Schimmel, for he became alarmed at our investigations and fled to Mexico, and South America, and then, with the aid of Count Luxburg he made his way back to Germany. Again, Wolpert had spoken of having met Fay in Schimmel's office with Rintelen — but Wolpert would not talk. There was a reasonable margin of doubt in our minds

of Schimmel's behavior — enough to warrant Barth's going to Boniface and asking him to come to headquarters.

Schimmel, Boniface told us, had employed him for a time at \$25 a week. And what had he done in return? Nothing more than provide Schimmel with a list of weekly sailings of all steamships leaving New York for Europe, together with a description of their cargoes. Why had Schimmel, a lawyer, been interested in sailings and cargoes? Boniface said he did not know. How had Boniface compiled the list? At first, he said, by scouting along the waterfront, picking up scraps of conversation here and there and keeping an observant eye on the trucks bound for the piers. Pier-guards began to notice him a trifle too attentively, the waterfront was too many miles long, twenty-five dollars a week was only twenty-five dollars a week, and Boniface, it must be remarked, was racially thrifty. So he adopted the much simpler expedient of buying each morning a copy of the *New York Herald*, a newspaper which pays some attention to shipping, net cost in those days one cent, copying sailing dates, hours and destinations from its columns, and conjuring the cargoes out of his imagination.

Where had he delivered his reports? To

Schimmel in his office at 51 Chambers Street. Whom had he seen there? Why, Rintelen, once, but he didn't know what his business there was. Another time a man named Herman Ebling. (Ebling, it developed later, had been directed by Wolpert, who had had his orders from a Captain Steinburg, to take a tube of glanders germs and a dipping stick, seek out the wharves where horses were being shipped abroad for artillery and transport, and insert the germ-soaked stick into the nostrils of every third horse he could reach, in order that a serious epidemic might presently break out. Ebling claims he threw the tube overboard without fulfilling his mission.) Where was Ebling? Boniface professed not to know. Whom else had he seen? Well, there was another German lawyer, Martin Illsen, counsel for the *New Yorker Herald*, a German daily.

We sent for Illsen and questioned him of his dealings with Schimmel. He had written an article which he sent to the newspapers protesting against the shipment of arms and ammunition to the Allies, for which Schimmel had paid him \$100. That he said was the extent of his service.

"Did you ever see this man Ebling there?" I inquired, feeling that in Ebling we might find the missing link between the bomb-makers and the

Sergeant Thomas Jenkins, U. S. Army, who successfully located a part of one of the bombs in a locker in the German Turn Verein in Brooklyn

fires. "Yes," Illsen replied. "Where is he now?" Illsen did not know. "Do you remember meeting anyone else in the office?" "Yes, there was a lithographer. His name is Uhde. He comes, I think, from Brooklyn but I do not know where he is."

It is our business to find out where people are, and as the reader may already have observed, to follow a case through from one man to another if we have to question a thousand individuals on the way to our goal. We took up the search for Uhde, and investigated everyone of that name in Greater New York. More months had passed before we finally found the man we were after — Walter Uhde. We pounced on him without the formality of an examination, and searched his room, to find some correspondence with Schimmel and more newspaper accounts of the arrest and trial of the Hoboken gang. It was this evidence and the pressure which it brought to bear upon his conscience that made Uhde give up evidence enough to picture the bomb plot in its entirety.

It began, as the outbreak of the ship fires already had indicated, in the early months of 1915. One winter night there was a secret meeting in the restaurant of the Brooklyn Labor Lyceum. In a private dining-room sat Dr. Scheele, the

chemist, Captain Wolpert, the dock-superintendent, Karl Schimmel, the lawyer, Uhde, the lithographer, Eugene Reistert, the proprietor of the restaurant, and a certain Captain Steinburg. This man was particularly dangerous to the welfare of the United States. His real name was Erich von Steinmetz, and he was a captain in the German navy. At that time he had just come to America by way of Vladivostock, dodging the immigration examiners by travelling in woman's dress, and evading the quarantine authorities by concealing in the fold of the dress the same tubes of glanders germs with which he sent Ebling to inoculate the horses for the Allies. Steinmetz was Rintelen's first and ablest assistant, and Schimmel was his second. The two men outlined to the dinner party a plan to manufacture and plant the bombs. The sailors would make the containers, Scheele would see that they were filled and would act as paymaster for the group, Schimmel and Wolpert would keep in touch with the sailings and cargoes, and Wolpert, Uhde and Reistert would deliver them to the small fry who could be hired to place them in sugar-bags and other freight.

How well the plan succeeded we already know. Wolpert distributed the bombs to several local points of German operation in the greater city,

and even Scheele had on one occasion carried a box full of bombs packed only in sawdust from the laboratory over to the Labor Lyceum. Reistert and Uhde tested a few of the infernal machines in the rear of the building, and Uhde fancied them so much that he kept one as a souvenir, stowed away in the toe of an old boot in his locker at the Turn Verein, where Detectives Barth and Jenkins found it. The conspiracy had originated in March; the first day of May, Wolpert gave a bomb to a Chenango who smuggled it aboard the *Kirkoswald*, with the result which we have followed. On May 7, 1915, the glorious *Lusitania* was torpedoed, and on the following morning, Karl Schimmel, coming into his office and finding Illsen and Boniface there, exclaimed:

“ Ah — that U-boat commander has done well enough, but he has stolen all the glory away from me. I had nine cigars on the *Lusitania*.” (For “cigars” read “bombs.”) “If they had not torpedoed her the cigars would have done the work!”

He may have told the truth. His secret is at the bottom of the Atlantic now, along with what shreds of respect the civilized world might otherwise have had for Germany. It is certain that Schimmel tried to place his “cigars” aboard the

vessel, for Reistert had given Uhde \$100 and a little man named Klein a package of bombs with instructions to go to a saloon in West Street near the White Star piers. There they were to meet a third man, to whom they would deliver the package, and that man would see them safely aboard the ship. The man did not appear at the appointed hour, so they left the package with the bartender, and went to the missing man's house in Harlem, where they paid him his fee. It was the same Klein who had been carrying a bomb in his pocket one afternoon when Schimmel had sent him to South Ferry to place it aboard a ship. But the bomb caught fire, and before he could rid himself of it it had burned through his clothing, so Schimmel magnanimously gave him \$20 for a new suit and his trouble. And it was the same Klein whom we found dead of disease in a hospital, beyond the law's reach, when we finally were tracing him for arrest.

The stories of the culprits combined to lay at their door the origin of most of the ship fires with which we had been afflicted for the past two years. If nothing else had proved it, the cessation of the fires would have been enough. We were anxious, after our twisting, winding search, rather to have the guilty men convicted and placed in safe-keep-

ing than to fix definitely upon them the guilt for all of the fires — that would have been practically impossible — but the very fact that the fires ceased is sufficient evidence of their complete guilt. It was not until October 17, 1917, six months after the United States had gone to war, that our long hunt came to an end, and we arrested Boniface, Reistert, Uhde and one Peter Zeffert. It was Zeffert who confessed to having gone to Schimmel's office one afternoon to help him fill the bomb containers with chemicals. Reistert was there, and the three took the bombs away in a taxi-cab to meet a destroying agent in a waterfront saloon. The agent did not show up, and Messrs. Schimmel, Reistert and Zeffert thereupon returned to the Chambers Street office and unloaded the tubes.

I am sorry that our laws were not at that time drastic enough to punish the men as they deserved. James W. Osborne, the assistant United States Attorney who tried the case, wove an admirable prosecution, and Judge Harland B. Howe turned a stern face upon the prisoners. Wolpert had been haled from Atlanta to answer to the new charge, as had von Kleist and Becker. The engineers were brought out of their internment camps. And last, and foremost of all, Franz

Rintelen was there — returned to us by the British to answer to a series of charges which he had tried hard and expensively to conceal. The best our laws of the moment could do for these men who had defiled our hospitality and destroyed millions of dollars' worth of property on our soil was to sentence them to one-and-one-half years in Atlanta. It is to the everlasting credit of Judge Howe that Rintelen, Wolpert, von Kleist, Becker, Praedel, Paradies and Garbade received the maximum prison term, and the maximum fine of \$2,000 each. Under the espionage act later adopted each of them could be sentenced to twenty years and fined \$10,000.

Popular consent would have made short work of these men's lives. Justice had to preside over their trials, however, and they were punished to the full extent of an inadequate law. A more drastic criminal code would probably have frightened the German spies in the United States, and it is equally true that German agents who were caught in the net of the law laughed up their sleeves as they made use of one after another of the law's technical provisions and privileges to avert what would have been certain and swift death had they worn the field-gray uniforms of their nation. They have not suffered in propor-

Norman H. White, of Boston, a civilian attached to the Military Intelligence, who unearthed numerous German intrigues

tion to their crimes. But their nation is paying the price.

There is something in the spectacle of Rintelen serving his sentence at Atlanta — a long sentence, which he tried numerous tricks to evade — that is peculiarly German, and that comes more nearly satisfying our popular desire for retribution than the plight of any of his wretched employees. He came to America arrogant, rich, defiant, cruel, and sly — to wage war upon us. One of his first acts was to sign his check for \$10,000 to manufacture bombs to destroy our shipping. When certain Americans crossed his reeking trail he ran away in terror. By great good luck he was captured, discovered, and returned and by considerable persistence and patience on the part of the Bomb Squad one of his trails was laid bare. (He had many others.) He suffered great indignity, as he thought, at being tried with the manual laborers whom he had employed and left in trouble. He was convicted and sent to prison. He pleaded ill-health, though he was a strong man, and he tried to be transferred to a more lenient prison. He invoked the aid of his crumbling government, who informed Washington that unless he were surrendered to Germany that nation would take the lives of American soldiers cap-

tured in battle. Every trick failed, and Franz Rintelen, tried not as a prisoner of war for what morally were acts of war against the United States, but by our peace courts, and under our lenient peace laws, must now serve out his term in an American prison, although his nation has given up the war and begged for clemency.

Rintelen used to suggest that he was an illegitimate relative of the late Kaiser. It may be true: the two have something in common. The Kaiser has become plain Hohenzollern, and the chief German bomb-plotter in the United States, is, as Wolpert angrily said that day at headquarters, "not *von* Rintelen, damn him — *Rintelen!*"

VIII

MR. HOLT'S FOUR DAYS

The facts were apparently unrelated to each other. Only a flight of imagination would have connected them, and imagination, though it is often valuable in speculating on what probably happened, is not court evidence of what did happen. In the order of their occurrence, the facts were these:

1. On April 16, 1906, Leone Krembs Muentner, wife of Erich Muentner, an instructor in German in Harvard College, died, soon after the birth of her second baby. The circumstances of her death were suspicious, and the Coroner directed that the stomach of the body be taken to the Harvard Medical School for examination. Dr. Muentner, on the following day, requested that he be allowed to escort the remains from Cambridge to Chicago for burial, and this permission was granted. With the children he made the gloomy pilgrimage west. The body of the dead wife was cremated. Dr. Muentner wrote at once from Chicago to the New York Life Insurance Company directing that

the policy on his wife's life be made payable to her sister, instead of to himself. The examination of the lining of the stomach had indicated slow arsenical poisoning and a warrant was issued at once for the husband. But it reached Chicago to find him gone — no one knew where.

2. In a corridor of the main floor of the Senate wing of the United States Capitol at Washington used to stand a telephone switchboard. On the night of Friday, July 2, 1915, an explosion near it blew fragments of the board through the walls of the telephone booths adjoining. No one was about, which was lucky, for the wrecked switchboard was not the only damage done: plaster rained from the walls and ceilings, every door nearby was blown open (one was a door into the Vice-President's office which had not been in use for forty years), the east reception room was wrecked, a gaping hole was torn in the stonework of the wall, and fragments of windows, mirrors, crystal chandeliers and telephone apparatus flew in every direction.

3. In his country home on East Island, where Long Island reaches out into the Sound to form Glen Cove, John Pierpont Morgan was having breakfast on the morning of Saturday, July 3, 1915. It was nearly half past nine, and the

members of his family, together with several holiday guests, were in the breakfast room, which is on the eastern side of the house. An automobile drove up to the front door, and the butler was confronted by a man of dingy appearance who asked, in an accent suggesting German, to see Mr. Morgan. He presented a card bearing the legend "Society Summer Directory: represented by Thomas C. Lester." The butler wanted better credentials and asked for them. The stranger pulled a revolver from his pocket, covered the butler with it and stepping inside the door demanded, "Where is Morgan?"

With good presence of mind the butler answered, "In the library,"—the library being in the west wing of the house, and away from the breakfast room — and stepped toward the library door. Unfortunately it was open, and the intruder, who was following with his gun aimed, saw that the room was empty, and that the butler had lied. At the same moment Physick, the butler, realized that his ruse had not worked. He shouted, "Upstairs, Mr. Morgan! Upstairs!" hoping by the urgency of his cry to convey to the banker a warning that something was distinctly wrong and at the same time to get him out of range. Mr. Morgan at once hurried up a rear

stairway and began to search for the trouble. A moment later Mrs. Morgan joined him. They proceeded from one room to another, found nothing, and asked a nurse what was wrong. As the little search party reached the head of the main staircase, with Mrs. Morgan in the lead, she caught sight of a strange man with a revolver in each hand. Lester had come up the front staircase. Mr. Morgan saw his wife between himself and the guns, brushed her aside, and charged. The man fired twice as the two went to the floor, grappling, and the hammer of his revolver clicked twice more on caps that did not explode. Two wounds, one in the front of the abdomen, and the other in the left thigh, did not prevent Mr. Morgan, from overpowering his assailant: he lay with the full weight of his 220 pounds on the man's body, pinning down the revolvers to the floor. One of the guns Mrs. Morgan and the nurse wrenched from the man's hand; the other Mr. Morgan captured. Physick had meanwhile roused the servants, and he stunned the intruder with a lump of coal as he lay on the floor. Lester's unconscious form was then trussed up and taken to the Glen Cove jail.

There, briefly, were the facts. The Morgan shooting I have recounted in some detail to show

the desperation with which the stranger trespassed, and attempted murder. It was not an affair which suggested a motive of robbery, but apparently a cold attempt at assassination. The Capitol explosion had been fruitless in its results so far as the loss of human life was concerned, and its origin was at that time a complete mystery. The Muentner affair had long since passed out of my memory. How to get evidence to establish motives for the crimes, fix the entire responsibility, and punish the offenders?

Never, probably, has long-distance communication played a swifter or more helpful part in a case. In order to show just how a nation which has been called to the hunt can enter into the pursuit, let us follow the developments in their strict chronological order.

At seven o'clock Saturday morning, before Lester had appeared at the door of the Morgan house, the newspapers in Washington received a typewritten form letter, signed "R. Pearce," protesting in excited terms against the shipment of munitions to the nations at war. Its second paragraph read:

"In connection with the Senate affair would it not be well to stop and consider what we are doing?"

The writer stated further :

“ Sorry, I, too, had to use explosives (for the last time I trust). It is the export kind, and ought to make enough noise to be heard above the voices that clamor for war and blood money. This explosion is the exclamation point to my appeal for peace.”

Again he wrote :

“ By the way, don't put this on the Germans or Bryan. I am an old-fashioned American . . .”

And he added, in a penned postscript :

“ We would, of course, not sell to the Germans if they could buy here, and since so far we only sold to the Allies, neither side should object if we stopped.”

At half-past nine o'clock the shooting occurred at Glen Cove. About the same time Dr. Charles Munroe, consulting expert of the Bureau of Mines, was called to the Capitol to make an examination of the wreckage of the explosion. He soon arrived at the conclusion that the shock had been caused by no spontaneous combustion, but by a fair quantity of high explosive.

While he was prying about among the débris,

Lester was being lodged in the Glen Cove jail. His bonds were loosened, leaving him a very sore set of ankles and wrists, his cut forehead was bound up, and when he was questioned, he gave out the following statement:

“I, Frank Holt, of Ithaca, N. Y., and lately professor of German at Cornell, do hereby freely make to William E. Luyster, justice of the peace, the following statement of the facts concerning my visit to the home of J. P. Morgan at East Island, Glen Cove, N. Y.

“I have been in New York City about ten days and had made a previous trip to the home of Mr. Morgan last week. My motive in coming here was to try to force Mr. Morgan to use his influence with the manufacturers of munitions in the United States, and with the millionaires who are financing the war loans, to have an embargo put on shipments of war munitions, so as to relieve the American people from complicity in the death of thousands of our European brothers.

“If Germany should be able to buy munitions here we would of course positively refuse to sell to her. The reason that the American people have not as yet stopped the shipments seems to be that we are getting rich out of this traffic, but do we not get enough prosperity out of non-contraband shipments? And would it not be

better for us to make what money we can without causing the slaughter of Europeans?

"I am very sorry that I had to cause the Morgan family this unpleasantness, but I believe that if Mr. Morgan would put his shoulder to the wheel he could accomplish what I have endeavored to do. I wanted him to do the work I could not do. I hope that he will do his share anyway. We must stop our participation in the killing of Europeans, and God will take care of the rest."

Lester, then, was not Lester at all, but Frank Holt.

Meanwhile I knew nothing of what had transpired. I had risen that Saturday morning looking forward to a day of relaxation and pleasure, for there was to be a field day for the police at Gravesend Bay. On the way down to the track I read with some interest of the explosion in the Capitol, and then dismissed it from my mind: the newspapers, which had been printed about one o'clock of that morning, carried no news except a description of the effects of the explosion. Furthermore, it was a holiday, with another to follow, and I proposed to enjoy it.

About noon Police Commissioner Woods called me to the telephone, told me hurriedly that Mr. Morgan had been "shot by a German," and told me to get down to Glen Cove as fast as

possible. "Find out the man's motives and any accomplices he had," the commissioner said. "Keep in touch with me." And hung up. I found Detective Coy of the Bomb Squad, and a patrolman who knew German in case we should need an interpreter, and after some delay in getting a car, we hastened to the little Glen Cove jail.

Then, at four o'clock, for the first time, I was told the facts as Glen Cove knew them. A search of Holt's person had disclosed two revolvers, three sticks of dynamite, a number of loose cartridges, a cartoon clipped from a Philadelphia newspaper, an express receipt, and a scrap of paper bearing the names in pencilled handwriting of Mr. Morgan's children. Frank McCahill, the constable in charge, showed me the statement Holt had made, and supplied the further information that Holt had been identified by some of Mr. Morgan's employees as a man who had been seen on the estate two days before — on Thursday. Glen Cove had been in a turmoil since the shooting. Newspaper reporters and photographers had flocked to the jail, had taken photographs of the prisoner, and already prints of the photographs were on their way to every large newspaper in the country. His statement, as well

as a description of the man, had been telegraphed over the Associated and United Press wires in every direction. So I decided to have a talk with the prisoner himself.

He was brought out of his cell, and we sat in comparative privacy on two camp-stools in the corridor. He was a frail, slight fellow, with deep eye-sockets, a prominent hook-nose, and a retreating chin. His accent was certainly German. His name, he said, was Frank Holt, and he was born in the United States. He told me he was forty years old, that his father and mother had been born in America, although they had both French and German ancestors, and that his wife and two children were in Dallas. For several years, he said, he had taught in Vanderbilt University, and during the year just past had been instructor in German in Cornell University, at Ithaca. He had left Ithaca two weeks before, and had stopped at a Mills Hotel in New York before coming down to Glen Cove.

“What did you try to kill Mr. Morgan for?” I asked.

“I didn’t intend to kill him. I want to persuade him to use his influence to stop the shipment of ammunition to Europe.”

“Well, you chose a pretty strong means of

persuading him, didn't you? What was the dynamite for?"

"I was going to show him what was causing all the trouble — explosives."

He answered frankly, but not completely. The scrap of paper bearing the names of the Morgan children, he said, was only a memorandum; he had intended to hold them hostage until Mr. Morgan promised to exert himself to stop the export of supplies to the Allies. No amount of questioning would bring an answer as to where he had bought the dynamite, but he readily volunteered the approximate addresses of the shops where he had purchased the revolvers and cartridges. These facts gave me something to work on, and I went outside to a telephone while he was locked up again.

Meanwhile the whole United States had been taking a keen interest in the case. Holt's statement had reached Washington on the Associated Press wire, and was delivered to Captain Boardman of the Washington Police. Captain Boardman had been busy all morning throwing out lines on the Capitol case, and attempting to trace the author of the R. Pearce letters, which had been mailed in the city about nine o'clock of the previous evening. He read the Pearce letter over

several times in search of some clue to the writer. Presently the Holt statement came in. From the two communications these sentences met the Captain's eyes:

Pearce

"We would, of course, not sell to the Germans if they could buy here, and since so far we only sold to the Allies, neither side should object if we stopped."

Holt

"If Germany should be able to buy munitions here we would, of course, positively refuse to sell to her."

Captain Boardman's next move was to wire to his chief, Major Pullman, who happened to be in New York to attend that same field day that Coy and I had missed. His message, dated 2 P. M. (while we were on the way to Glen Cove), read:

"Ascertain from F. Holt, in custody at Glen Cove, N. Y., for shooting J. P. Morgan, his whereabouts Thursday and Friday, as he may have placed the bomb in the Capitol here Friday night."

This message, sent in care of Inspector Faurot, was relayed to us at Glen Cove by Guy Scull, deputy commissioner, but not until after the Asso-

ciated Press man at the jail had had a tip telegraphed from his Washington office to ask Holt the same question. Holt denied that he had been in Washington, flatly. But McCahill knew he had been in Glen Cove Thursday, so at 5 P. M. he telegraphed Captain Boardman:

“F. Holt was in Glen Cove Thursday, July 1, P. M.”

I telephoned headquarters the numbers of the revolvers, and the neighborhood in which Holt said he had bought them. Several members of the squad started out from headquarters to identify the pawnshops, and to find out what they could of the history of three sticks of dynamite marked “Keystone National Powder Company. 60 per cent. Emporium, Pa.”

Holt had proved obstinate to all questions of the source of his supply of dynamite. The man was getting tired: he had had a hard day, had been considerably battered, had been interviewed, photographed, harried with questions, his ankles and wrists ached, his head throbbed, and his mind, which though alert and active, was none too stable, was showing signs of exhaustion. His condition suggested that he might be in a mood to supply some of the further information we

needed, so I suggested that we take an automobile ride and he could show me where he had been the day before. He protested at once.

“No! My head is aching, and you want to take me on a ride and make a show of me to the morbid crowd. I will not tell you — not until later. Later perhaps, but not now!”

“All right,” I answered. “Later.”

Then I decided we had better get our information down on paper in a formal examination.

The meeting convened at once, with Coy, McCahill, a county detective from Mineola, two deputy sheriffs, two patrolmen, a stenographer and myself as board of inquiry. It may serve to describe the fellow's manner, as well as to bring out what the examination further disclosed, if we make use here of extracts from the proceedings:

Question. Where were you born?

Answer. Somehow my brain is in such a shape that I can't remember — Wisconsin, I know. I don't know what it is that affected me — something inside of me — maybe it is the shock I got from that.

Q. You speak with a German accent. Were you born in Germany, or in any of the European countries — tell me the truth.

A. Now listen. That has been said before — that I speak with a foreign accent. That is because I speak several languages. I speak French, German, Spanish, and all that. That is the cause of that, you see?

Q. We will eliminate the trouble of asking you questions if you will tell us the town or city in which you were born.

A. Yes. Now I am trying to think (a pause) I will have to disappoint you.

Q. Your memory is very clear on other things.

A. As I told you, I have been lying there, thinking, thinking.

I took up the matter of the express receipt found on him:

Q. On June 11, 1915, you shipped a box by the American Express Company to D. F. Sensabaugh, 101 South Marsalis Street, Dallas, Texas. What did that box contain?

A. It evidently must have been a typewriter. I would not be sure now, I think it was a typewriter.

And then the cartoon, clipped from the Philadelphia paper, brought out a very unexpected fact:

Q. How many times have you been in Philadelphia?

A. No time.

Q. You came to New York from Ithaca?

A. Yes.

Q. Do you mean to truthfully answer my question by saying that you have not been to Philadelphia at any time since you left Ithaca?

A. At no time.

Q. You have a clipping of a Philadelphia newspaper in your possession. Where did you get that?

A. I think I got that out of a Philadelphia paper of course, that I found lying around. I think it was a cartoon.

Q. Were you not in Philadelphia when you purchased that paper?

A. I did not purchase that. I saw that lying around somewhere, probably in the Mills Hotel.

Q. Where did you sleep last night?

A. Now, I will tell you. A reporter from the Associated Press asked me about this Washington business, and he was trying to connect me with that. I suppose that is what you are trying to do.

Q. I am not trying to connect you with anything. I want truthful answers. I am very frank and honest with you. I will fairly investigate every answer that you make.

A. Yes, I thought that over since he was here, and I think it is just as well to say that I wrote that R. Pearce letter. I was in Washington yesterday and came back on the train. I think it is just as well to say.

Here was news! McCahill slipped out of the room, and sent this telegram to Captain Boardman:

"Holt was in Washington Friday. Will wire full particulars later," and returned for the particulars, which Holt continued to unfold.

He had gone to Washington early Friday, arriving at 2 P. M., hired a furnished room near the Union Station, and two hours later walked over to the Capitol and found the Senate wing deserted. He placed a bomb near the telephone booth, timed so as to explode in eight hours. He idled away the evening, mailed the R. Pearce letters, took a midnight train to New York, stopped at the Mills Hotel for mail, and took an early train to Glen Cove Saturday morning. What his activities had been since then we well knew. But while the confession of his responsibility for the Washington outrage was a really surprising bit, it did not conclude our work, for he had pointed out several new alleys of possibility which we must search.

By seven o'clock we had, first, a sketch of Holt's recent career as a teacher. This we proceeded to verify by telephone to New York and by telegraph thence to Ithaca, Dallas, Nashville, and Philadelphia. His account of the Washington bombing Mr. Scull telephoned to Washington, and Major Pullman left at once for Long Island to secure a more complete confession. We had the numbers of his revolvers and were already at work upon that clue. We had no information except the trade-mark of where he had got his dynamite, and knowing the strict city restrictions on its sale, I felt confident that he had accomplices who supplied it to him. The chances were, too, that Holt had more dynamite than the three sticks which he said had made up the Capitol bomb, and the three on his person. We knew he had called at the Mills Hotel, and we sent a man to search his room. We had a wholly unsatisfactory statement of his birthplace, which he had already contradicted once, and which lent color to the Germanic origin of his accent. And finally, Holt had given a description of the methods he used in making his bomb which I cannot detail here for obvious reasons, but which from my acquaintance with explosives I knew to be untrue. By no means all the particulars of his acquaintance with dyna-

mite had been explained, and the fact that this remarkable teacher of foreign languages, a man apparently of fair intellect, had committed one major crime and confessed to another all in the same day, made the motive all the more obscure. But we had learned that he talked freely, and that meant that he would give us more information, either consciously or unconsciously.

Holt was moved about half past seven that night to safer keeping in the county jail at Mineola, and we reconvened there an hour later for further examination. Major Pullman joined us in the course of the evening and took part in the questioning. By that time I had word from New York that a telegram had arrived for Holt at the Mills Hotel signed by D. F. Sensabaugh, and inquiring for particulars. Thinking that this was a clue to possible accomplices I tried, taking several different angles of attack, to find out whether Holt had told Sensabaugh (who he said was his father-in-law), what he was going to do, and why he had written that evening to his wife. The result of this questioning was nil. Then we went over his course in Washington, step by step, and brought out nothing of significance; then returned to the topic of his views on the shipment of munitions, and tried to draw out any talks which he

might have had with friends on that subject. His answer to this was:

"I have not talked to my friends about it, because my friends, in my position, they are not the kind of people who would talk on such things. Do you suppose that a university professor would undertake that sort of thing? I think that can be easily figured out that I could not have anybody else with me."

That was the conclusion which we were being forced to accept. But the mystery of the dynamite purchase was still unsolved. Holt said we could not guess the reason why he was withholding the answer to it. I was inclined to agree with him just then. I couldn't guess. But he betrayed in one of his replies the real factor which was to solve the mystery. Major Pullman asked:

"Why did you decide to go to the Capitol?"

"Merely," replied the thin figure in the chair, "to get the most prominent place in the country. You see I wanted to call attention to my appeal."

In this he had succeeded. The whole country was working on the case. If our feeling that Holt had bought more explosives was no more than a theory at first, it was strengthened when he admitted that he had spent nearly \$275 in two

weeks, had only six sticks of dynamite to show for it, and was able to account for only \$50. He denied that he had ever been in the German Club in New York, reiterated that he was born in the United States, dodged the exact city, then suggested Milwaukee, said that the name of the college he had attended in Texas "wouldn't come," and sidestepped cleverly any admission which might allow us to trace the dynamite purchase. Thus ended Saturday, July 3, which had started out as a holiday. I left two men to watch Holt, and went home, tired out, and not at all satisfied.

While we had been busy with the prisoner, the wires to Boston and the trains to Chicago had been carrying out their routine tasks of syndicating news. A police officer in Cambridge in reading the description of Holt which had flashed out to the newspapers detected a familiar ring to the natural phrase "shambling walk" which had been used to describe Holt's gait. Thousands of men whom we encounter in daily life have shambling walks, but to this officer only one man had a shambling walk in which he was interested, and that man was Erich Muentner, a Harvard instructor, whom he had suspected of wife-murder nine years before. Nine years is a long time, and the average person cannot recall offhand the gait

of anyone whom he last saw nine years ago, but those two words had evidently typified to the Cambridge officer the murderer who got away. When the news photographs followed the description to Boston and the Cambridge police saw them, they were not so sure, for Muentner had had a beard, and in his Cambridge days his head was not bandaged. But suspicion had been aroused, and that was enough to issue the news throughout the country during the night. Reporters in Ithaca tried to verify it from Holt's associates at Cornell, and failed, reporters two thousand miles away in Dallas tried to verify it from Holt's confused father-in-law, and failed. Dallas, however, supplied the particulars of his previous life so far as anyone seemed to know them, and these particulars were again relayed, verified, and amplified in every city in which Holt had ever been known in recent years.

Sunday morning, Independence Day, I went early to Mineola and questioned Holt again, with little result. Meanwhile the Bomb Squad at work in New York had found one of the shops in Jersey City where Holt had purchased a revolver. He gave his name to the proprietor as "Henderson," and his address as Syosset, Long Island — a little station not far from Glen Cove. I asked him

why he gave this fictitious name and address; he replied he had happened to see Syosset on a timetable, and that the name Henderson popped into his head. We then returned to my favorite subject, dynamite, and Holt finally said that he would tell me on the following Wednesday, July 7, where he had bought it. Why Wednesday, July 7? He would not answer, and no amount of questioning served any end except that of further confusion.

The day was not without developments, however. During the afternoon District Attorney Smith of Nassau County paid a visit to the jail, and identified the wretched Holt as a former acquaintance in Cambridge, Erich Muentner. At almost the same hour the Chicago authorities came into possession of the news photograph of the man mailed from New York the day before. They hurried with it to the home of two spinsters, known to be sisters of the missing Muentner, and obtained from them an unqualified identification: it was their lost brother, and "the news would kill their mother." This Pearce-Lester-Holt-Henderson-Muentner was becoming more interesting every minute. Wife-poisoner, dynamiter, gunman — what next?

"Next" was Monday. The second revolver-

shop had been discovered, and again the use of the alias Henderson and the address Syosset. Holt, when I called on him in the morning, repeated only what he had told the day before, and reiterated, "Wednesday I will tell you," until it became almost a refrain. He denied that he was Muentner, and that he had ever heard the name. I returned to New York to spend the rest of the daylight in investigation among the explosives' manufacturers. From the records of the Ætna Company, of which the Keystone was a subsidiary, we learned during the afternoon that one Henderson had telephoned an order for 200 sticks of dynamite to be delivered at Syosset. I was just ready to start for Syosset with Commissioner Scull when, as if we had not already had enough to interest us, our friends the anarchists exploded a bomb in Police Headquarters itself. Curiously enough, although it was a delay, this did not prove the disturbing incident which one might believe. We had had anonymous threats of it some weeks before; it was one year and a day after the accidental death of the anarchist Berg, who was killed making a bomb, and it seemed to have no connection whatever with the Holt case. No one was injured, and after steps had been taken to follow the

case, I went home to sleep what was left of the night.

Tuesday arrived.

I went to Syosset, and interviewed the station agent, George D. Carnes. Carnes said he knew a man named Henderson. Henderson had seen him first about three weeks before when he came to the little station to claim a new trunk which had been shipped down from New York, apparently empty, as it weighed only thirty-six pounds. Henderson had signed for the trunk, and gone away. He reappeared some days later and asked Carnes whether he had received two boxes of dynamite and two boxes of fuses and detonating caps — he had to blow up some stumps and he expected the explosives. They had not arrived. Henderson made inquiries for several days, and when the boxes came, claimed them, signed the name of Frank Hendrix to the receipt, and drove away in a Ford. At last we seemed to be on the right trail.

He had received the material, we knew, but where was it? In the trunk, perhaps. Had the trunk been shipped out of Syosset? No, Carnes said. We telephoned several stations in the vicinity, and finally at Central Park, a few miles

west, we struck the trail again. The baggage records there revealed that a Henderson had checked a trunk to the Pennsylvania station, New York, on July 2 — Friday. That was enough to take us to Central Park.

The check number I telephoned to New York for detectives to trace from the station if they could. Information of a stranger is freely offered in a village, and we found shortly that Holt had employed a small boy with a wheelbarrow to convey his trunk from a shanty in the woods to the station, and to the shanty we went. Near it lay a charred dynamite-box, and there were a few wax-paper wrappers from sticks of dynamite which the weather had left for our information. No explosive was to be seen, but there was evidence that he had burned some of it nearby.

If he had not burned it all, the balance of those two hundred sticks were in the trunk. The day was growing old. Carnes and I sped back to Mineola, and the station agent identified Holt as the dynamite man. I repeated my questions; Holt replied, "I will tell you Wednesday."

"Look here," I said. "I have the number of that check. That dynamite is in the trunk. It's liable to go off any minute and kill a lot of people. I can trace that check, but it will take

time, and you better tell me quick where you left the trunk."

"All right," Holt answered, and said that he had sent it to a storage warehouse whose office was somewhere near 40th Street and Seventh Avenue. Two minutes later Lieut. Barnitz and I were out of the jail and in a motor bound for New York.

It took just 28 minutes to cover the 20 miles to Fifty-Ninth Street and Fifth Avenue, and we turned south to the section around Fortieth Street. We found the office of the storage company — empty. The warehouse itself was at 342 West 38th Street, and we hurried over there, arriving simultaneously with the detectives who had been tracing the check number from the Pennsylvania station. An old watchman was in charge who knew nothing whatever of the records of the office, but who turned bright green when we told him what we were after. While Detectives Barnitz, Coy, Murphy, Sterett, Walsh and Fenelly went up into the recesses of the warehouse to hunt for the trunk, I called headquarters.

"Commissioner Woods just called and wants you to call him at the Harvard Club," the office said. I did so, and reported our progress.

"Get that trunk as fast you can and find out exactly what's in it," said the Commissioner.

“ Washington just called me to say that Governor Colquitt down in Dallas just wired them. He says Holt’s wife got a letter from Holt dated July 2 saying that he’s put dynamite on a ship now at sea, and that it will sink on the seventh! ”

On the fifth floor of the great dark barn they discovered the trunk, with a dozen others on top of it. There were no lights, and it was necessary to roll it over, haul it out, snake it across other piles, and carry it down four flights of steep stairs in the dark to the office. Barnitz picked up an axe and hacked the lock away. He lifted the cover, and there we found one hundred and thirty-four sticks of dynamite — one hundred in their original box, and the rest packed in small spaces between hammers, nails, bolts, and other tools, several bottles of sulphuric and nitric acid, and 197 detonating caps — a pretty package to trundle down four flights of dark stairs and open with an axe!

Fifty sticks of the original 200 were unaccounted for. I telephoned the report to the Commissioner, and followed it to the Harvard Club, in 44th Street, while Barnitz telephoned for the inspector of combustibles to come and take possession of the explosives. The Commissioner, with Guy Scull, were sitting in the lounge, and I was

reporting in greater detail when the Commissioner was called to the telephone. He returned a moment later, and his first remark was this:

"Holt is dead at Mineola!"

And there went our case.

The first wild report from Mineola had it that Holt had been shot by a German. The international consequences of the case, which had been hovering just out of reach for the past four days, now seemed certain. A nation which was still bitterly angry over the recent *Lusitania* sinking would certainly not brook the violation of its Capitol and the attempted assassination of one of its chief figures by a German agent, and if Holt had been shot by a German, it was more than likely that he had been killed to prevent a further confession which would implicate the Imperial German Government. These thoughts passed through our minds as we motored back across the Queensboro Bridge, and retraced the route Barnitz and I had just traveled.

Holt was not shot by a German. Holt was not shot at all. An aged guard had been left to watch him that evening, just after Barnitz and I had left, for the prisoner, despairing over the Muentzer identification, had already made one attempt with a bit of tin from a lead pencil to cut

the arteries of his wrists, and we did not want him to try again. The old bailiff who sat outside the cell cage had not only left the cage door unlocked, but had been careless enough to leave Holt's cell door ajar. The prisoner seemed quiet enough, and the bailiff fell asleep. He woke to find Holt's body in a twisted heap in the center of the floor of the cell corridor. Holt had evidently been feigning sleep and while the bailiff dozed had crept out, climbed to the top of the cage, and dived headforemost to the concrete floor.

There we found him. The man's skull was crushed from the impact of his dive. Rumors that he was shot by a mysterious rifle bullet from outside notwithstanding, Holt bore no wound except the bruise Physick gave him with the lump of coal, and the wound which was the result of his fall. If Holt was a German agent, he died with his secret.

We had no time to analyze the question. We knew that Holt had written his wife he had placed dynamite aboard a ship which was at sea, and that July 7, the date on which he had promised an explosion, was less than two hours away. On the theory that he might have shipped an express parcel containing a bomb overseas from some nearby station, Mr. Scull and I spent the night

in an exhaustive canvass by telephone and motor of every station in Nassau County. Many of the station agents were asleep, but we woke them, and searched until dawn. The net result was record of two shipments to Europe since the day Holt received the dynamite: One from Syosset the other from Oyster Bay. Back to New York again we raced, and at the office of the Adams Express Company found the Syosset package, opened it, and found — no dynamite at all. The Oyster Bay package had already been shipped to Europe; we telephoned the consignor, and learned that it contained clothes for a poor relative in England.

Apparently Holt had not shipped a bomb. While we were opening his trunk at the warehouse the night before, the government was issuing from Washington a wireless bulletin to all ships at sea, warning them to search the cargo thoroughly for a bomb. One by one the vessels which had sailed during the past week reported that they had investigated with no result, and as these reports came in we began to rest easier in our minds. Yet he had so persistently refused to tell us of the dynamite “until Wednesday” that we could not ignore the prophecy he had made to his wife — “With God’s help, a ship that sailed

from New York July 3 will sink on July 7." At noon, of Wednesday, July 7, an explosion occurred in the hold of the steamship *Minnehaha*, in mid-ocean, so strong as to blow out a section of the upper decks. The *Minnehaha* had left New York on July 3. Happily there was no loss of life, and she reached port safely.

Two and two make four, but we must not add them for a moment. Holt — or Muentner, as he was fully and finally identified — may have placed a bomb in the *Minnehaha*. His promise may have been valid, but there is another possible origin for that explosion, namely, the activities of Paul Koenig's little group. He may have placed a bomb on the *Minnehaha* which was exploded by a bomb placed there by another. He may have placed a bomb on quite another ship — which did not explode, and which may have traveled harmless to its consignee in England. That consignee may have been fictitious, or he may have been an accomplice; if an accomplice he may have been German. We must not add two and two until we have gathered up the loose threads as they were gathered up during those last active days, and begin to sort them out.

If we do, we shall see that the Ithaca police found in Holt's rooms a scrapbook curiously re-

plete with newspaper reports of crimes, fratricides, patricides and plain murders. But no cases of wife-murder, nor of arsenical poisoning. And no clippings dating back of 1906; for all the evidence of the scrapbook, Holt had never existed before 1907. His wife, who, by a queer coincidence, bore the same maiden name, Leona, as the one whom he had poisoned, apparently knew nothing of Holt's life before she met him in Texas in 1909, loved him, and married him. She did not know that he was born in Germany, and educated in Germany or that he had fled from Chicago to Mexico in 1906 and had then worked back into Texas as a student. He probably wrote to her from Ithaca in September, 1914, that he had just had the pleasure of meeting Professor Ernest Elster, of Marburg, Germany, who was visiting Cornell, and that Elster had highly commended him for his articles on Goethe — but if he did write to her, what then? Perhaps Herr Professor Elster had commended Holt for some other past or projected service to *Kultur*. There is a queer development of the story in the fact that on September 4, 1915, Mrs. Frank Holt, writing from Dallas, Texas, to Griffithe's warehouse, enclosed one dollar to pay for storage on a trunk left there by her husband July 2, and signed her

name: "F. H. Henderson." Perhaps the rumor is true that a woman appeared at the offices of J. P. Morgan and Company in New York on July 2, 1915, and attempted to warn Mr. Morgan of "something that was going to happen the next day" and perhaps she was a friend of von Rintelen's. Mr. Morgan never saw her. But it is a fact that Rintelen had said to an American with whom he was dealing: "Morgan and Root ought to be put out of the way!"

Probably — not perhaps — speculation has already carried this story too far. The facts are that Mr. Morgan recovered from his wounds, and that two and two make four.

IX

THE NATURE FAKER

Richard Harding Davis could have done justice to this story.

In December of 1917 we had been eight months at war. We would be an innocent and purposely ignorant nation if we did not acknowledge that even after we had been eight months at war there were German spies in the United States practising their quiet trade in order to make our waging of war as difficult as possible, just as for three years they had practised to keep us out of the war entirely. It would be as absurd to assume that there are not German spies in America to-day who have been here throughout our part in the war, and who have done their utmost to cripple us.

But there is one who will not be here indefinitely. . . .

In December, 1917, I received a complaint that valuable papers had been stolen from a certain Captain Claude Staughton, who lived at 137 West 75th Street, Manhattan. The Captain himself said that the lives of thousands of American sol-

diers were in jeopardy, and that neither they nor he would rest in conscious security until those papers were found. So two other Thomases of the Bomb Squad, Sergeant Thomas J. Ford and Detective Thomas J. Cavanagh, were sent to investigate the theft.

They found that Captain Staughton lived in an apartment on the second floor of the premises at 137 West 75th Street and that his rooms were shared by a Captain Horace D. Ashton. Staughton, they learned, was a captain of West Australia Light Horse — or was supposed to be — and a photograph they found of the captain in his uniform revealed four gold wound-stripes on his sleeve, which suggested an interesting and heroic experience overseas. The detectives' first assumption was that the missing papers had had to do with British war work on which the captain was detailed to the United States. Then they found several photographic prints in which he was dressed in the uniforms of other nations than Great Britain, and their second assumption was that he might be another of the nervy little band of counterfeit officers which had done all its fighting in the restaurants and sympathetic check-books of New York during the war.

The detectives learned that Ashton had his

mail forwarded to the "Argus Laboratories" at 220 West 42d Street. They called upon Ashton, and inquired about his room-mate. Duquesne was all right, Ashton said — was employed by an engineering company downtown as an inspector of airplanes, was in Pittsburg at the moment, but was expected shortly to return. Duquesne returned, and was placed under arrest on the charge (we had no better one at the moment) of unlawfully masquerading in the uniform of one of our allies, a uniform to which he had no title. A thousand questions sprang up in our minds about the man: why was he in disguise, how long had he been posing, how could he carry out the bluff without being discovered, especially by the highly reputable firm which employed him? — those were a few. We began to investigate, and from Ashton and other sources we pieced together the checkered pattern of his career. Many of the fragments are missing, and some of them are probably in the wrong places, but this is the picture we found.

He had applied for work at the J. G. White Engineering Company on September 18, 1917, and in his rather detailed application for employment set forth that his name was Fred du Quesne. He stated further that he was 39 years old, married, and a United States citizen, though born in

a British colony. His nearest relative was "A. Jocelyn du Quesne," in Los Angeles, and he had evidently had some trouble in parting the name in the middle, for it was written over an erasure. His next nearest relative was set down as "Viscount François de Rancogne, Prisoner of War, Germany,"—an address safe enough from prompt investigation. Last of all his relatives was cited Edward Wortley, "Colonial Secretary, Jamaica, B. W. I." The three names were impressive, and with the possible exception of Los Angeles, the addresses were too remote to enable the J. G. White Company to find out quickly what sort of man this du Quesne might be.

He described himself as a graduate of St. Cyr, the French West Point, as master of French and English (not German or Portuguese or Spanish), and as having lived in England, France, Africa, Australia, Central America, Brazil, Argentine, and the United States (but not Germany). Present position he had none, but he would like one as "Inspector of military devices, purchasing agent for same, or army supplies transportation." You or I, were we working for the Kaiser, would have liked just such a position. He gave as references the name of Thomas O'Connell, a relative employed by the J. G. White Company in Nica-

ragua; Ashton, Senator Robert Broussard of Washington, and the Marquis (not "viscount" this time) de Rancogne, "Lieutenant General of Cavalry, France."

He then set forth his previous experience, which I may quote direct in the light of later events:

"1898 to 1899. Secretary to board of selection on military devices and contracts. South Africa reporting Genr. de Villiers. (salary) £10 weekly.

"1899 to 1902. South African War. Was inspector of military communication and reported secretary of war." (*He does not state which secretary of war*) £12.2.6 weekly.

"1902 to 1903. Lived in United States to start residence. Had an experience job in the subway looking on. \$25.00.

"1903 to 1904. Went on tour of Congo Free State in the interests of making favorable publicity in this country for King Leopold. Gerard Harry in charge of campaign for the King. Received \$10,000 for the job, with expenses.

"1904-5-6. Headed Eldu expedition and industrial research party in Australia. Sir Arthur Jones financed me. Received £2,000 yearly.

"1907-8. Toured Russia for *Petit Bleu*. Publicity. 1,000 florins weekly.

“1908-9-10. Organized and built string of theatres in British West Indies. Financed and erected hydro-electric plant for S. S. Wortley & Co., Kingston, Jamaica. Made percentages.

“1911-12. Lived in Nicaragua and Guatemala. Was with Mr. Thomas O’Connell in Nicaragua for one year. Made industrial and investment investigations, especially ore, fibre, rubber. \$5,000 and expenses yearly. Mr. Hite financed. Address New Rochelle.

“1913-14-15-16. Explored and travelled in South America, Brazil, Argentine, Peru, and Bolivia, on own account. Also conducted special expedition for Horace Ashton of 220 W. 42d St., New York.”

An eventful record, certainly. We asked Ashton to cast a little light on it. Captain Fritz Joubert Duquesne, he said, was a scout in the Boer war — “the leading scout” were his exact words — but not for the British, but the Boers. There may have been a touch of irony in Duquesne’s description of himself as “inspector of military communications” for he had been captured eight or nine times in his migrations through the British lines and had escaped each time — until the last, when he was made a prisoner of war at Cape Town, and according to an entry in the

records of Scotland Yard, "was sent to Bermuda, whence he escaped after the declaration of Peace." The same records say: "The man Duquesne was acting as correspondent for a Belgian paper, the *Petit Bleu*; he was however in reality working for the Boers. . . ." Duquesne fancied photographs of himself, as he made up rather dashingly, and an old print which the Bomb Squad men found in his effects bore out the fact of his imprisonment, for there he stood in his Bermuda jail with the shackles on his ankles and a grim, martyred expression on his face.

The lure of Africa called to him, evidently, and he went back. We need not take too seriously his statement that he made a junket for King Leopold through the Belgian Congo, but anyone who remembers the uproar over the slavery by which the depraved old monarch was turning his colony into gold to pay for his excesses will also recall the international complications which the Congo threatened. It was a likely spot for an international spy. During his survey of the publicity possibilities of the jungle Duquesne conceived a few publicity possibilities for himself, and he came to America as a mighty hunter of big game.

"I ran across him first," said Ashton, "in 1909.

— At that time he was writing an article for *Hampton's Magazine* called 'Hunting Big Game in Africa.' In publishing his articles he needed photographs, and he came to me. I was interested in his conversation and I said to him: 'Why don't you lecture?' So he went down to the Pond Lyceum Bureau. He went on a lecture tour for the Lyceum and later on a tour of the Keith circuit. . . ."

We found in his effects a program of the lectures he gave, its cover decorated with a small round photograph of Colonel Roosevelt in hunting costume and a large studio photograph of Duquesne in khaki, wearing boots and a revolver, and looking sternly out of the picture as tradition says a lion-hunter should look. Page two carried a synopsis of his lecture, of which one topic was "Hunting with Roosevelt," and a reproduction of a number of newspapers which were then publishing his "Hunting Ahead of Roosevelt," an article written for *Hampton's Magazine*. On page three Captain Duquesne figured again in effigy, this time standing beside the prostrate form of "A Rare Specimen — the 'White Rhinoceros,'" and we are to believe that he killed the beast. Page four (and last), reproduced a cartoon from the *Washington Star* of January 26,

Fritz Duquesne prepared for a Lecture Tour as Captain
Claude Stoughton

1909, which portrayed President Roosevelt pointing to a picture of an elephant, and enthusiastically inquiring of a hairy hunter labelled "Duquesne": "I want to know his vital spot!"

A quotation from *Hampton's Magazine*, also printed in this program, gives a new vision of the man's life from 1900 to 1909. It is probably as truthful as any — here it is:

"When the British succeeded in cutting cable communications between the Boer Republic and the rest of the world, Duquesne carried the news of the Boer victories over the Mozambique border, and from there he wrote his despatches to the *Petit Bleu*, the official European organ of the Boer Government. He was once captured by the Portuguese and thrown into prison at Lorenzo Marques. Later he was taken a prisoner to Europe at the request of the British Government. When the ship that conveyed him and his guard touched at Naples, he was suffering from a fever and in consequence was placed in an Italian hospital. On his recovery he was allowed to go free. He went to Brussels and was sent back to the front by Doctor Leyds, with plans for the seizure of Cape Town by the Boer commandos then mobilized in Cape Colony.

"Everything was ready for the taking of the

city when, a traitor having revealed the plot, Duquesne and a number of others were captured in Cape Town inside the British defenses. This was the climax of what has come to be known as the 'Cape Town Plot.' Some of the prisoners were shot and some sentenced to death who later had their sentences changed to life imprisonment. Captain Duquesne was among the latter. Ten months later he escaped from the Bermuda prisons, got aboard the American yacht *Margaret* of New York while she was coaling at the dock, and was conveyed to Baltimore.

"Back to Europe he went again, as war correspondent and military writer on the *Petit Bleu*; thence to Africa, where he took a commission on the Congo. In East Africa he hunted big game for sport and profit, and finally he came to New York to do newspaper and magazine work."

He cut a figure in America as a hunter. Back in 1910, when Congress amused itself with light diversions, when President Taft was in the White House and when President Roosevelt was in Africa, the eyes of the nation were turned perforce toward that great preserve of wild game. On March 24, 1910, the House of Representatives' Committee on Agriculture went into session with the Honorable Charles F. Scott in the chair.

Late March in Washington has a hint of spring, and that Thursday was probably an off-day, with nothing much to do, for the committee's business was the consideration of H. R. 23261 — a bill "to import into the United States wild and domestic animals whose habitat is similar to government reservations and lands at present unoccupied and unused. . . . *Provided*, that such animals will thrive and propagate and prove useful either as food or as beasts of burden, and that two hundred and fifty thousand dollars . . . be appropriated for this purpose." The bill was Representative Broussard's, of Louisiana; he had in mind the re-population of the unyielding backwaters of his constituency with happy families of — what? Foreign sheep, or parrots, or egrets, or fish? Not at all. Families of hippopotamuses.

The Gentleman from Louisiana addressed the meeting briefly, saying that he had brought to the hearing three distinguished specialists in the matter of wild beasts, Dr. Irwin of the Bureau of Plant Industry, Major Frederic Russell Burnham, a fine old pioneer whom Richard Harding Davis did describe in his "Real Soldiers of Fortune," and "Captain Fritz Duquesne, formerly in the Boer army, who is lecturing and writing on this

subject. . . .” Dr. Irwin spoke earnestly for the introduction of the hippo, Major Burnham made an absorbing address on the habits of wild animals he had known — and a herd of camels he once pursued in Texas — and our bright and voluble Captain Fritz then told the committee extraordinary things of the home of the hippopotamus, the delicacy of its flesh, the amiability of its temperament, and the carelessness of its appetite. “During my boyhood,” he said at one stage of the proceedings, “the French soap manufacturers used to come down there and pay us all sorts of prices, competing with one another, to get the fat of the hippopotamus; and we made a considerable amount of money from saving the fat when we killed a hippo. The Boers were in the habit of going down to the river and killing a hippo and bringing it in and dividing it among the different families in the district. It is pretty hard to get rid of four and a half tons of meat. In the case of the bones of the animal, we would take an ordinary wood saw and saw them in halves, and make a great big pot of soup for a large number of the people, including the Kaffir servants on the ranch, or the farm, as we call it.” Again: “My father was instrumental in sending the camel to Australia from Africa, and also in introducing

it into the Kalahari desert. The German Government now uses the camel exclusively for its cavalry in the Kalahari desert, which is practically the counterpart of the deserts in this country. My father had the contract to take them over to Australia for the West Australian Government and I took them over there. To-day camels and ostriches from Africa are being raised in Australia."

Mr. Chapman asked: "Do you think animals such as you have mentioned would become acclimated here without difficulty?" Duquesne replied: "Yes, I was over there recently in one place where Colonel Roosevelt passed through, and the frost was that thick (indicating about one inch). That is where he went to get some of his best animals. . . ." In discussing the zebra he said: "There is nothing wrong with the animal. The English in Africa want to get percentage, you know. They put an animal out and they want to break it in right away, and they want to get some money for it right on the spot. That is what they are in Africa for. They want to take on the animals and break them in at once. The Germans are more scientific than the English. In German East Africa they are making a great success of domesticating these animals I

have spoken of, and crossing the zebra. . . . The Germans in Germany, France, and Belgium, not to mention those in the United States, tried scientifically to make the leopard change his spots, too."

The man really exhibited an unusual acquaintance with wild beasts, and he summed up the picturesque argument for the bill when he said: "If there is vegetation in a river, the hippopotamus will never leave the river. If you had the hippopotamus in Louisiana and it ate up all your water plants you would be quite willing to let the hippo live down there. You see the water plants have to live on a certain amount of air, and the fish live on a certain amount of air. Neither the plant nor the fish can live on air that is not there. As the plant is the stronger, and is able to take the air from above, it will draw it at the bottom and draw it from the top, and the fish is suffocated in the water. Then when a storm comes and blows the water plants, which are floating, all to one side, the fish are netted up against them and kept in one place until they die. These plants exhaust the air in the water that is passing through the fishes' gills and that destroys the fish." I wish there were space here to reproduce all the proceedings of that hearing — it

is historic vaudeville: a German spy teaching a class of American congressmen about the hippo, and suggesting subtly that when they purchase a fleet of the great beasts for the Louisiana bayous, they let him round them up. He would have done it if there had been American money in it.

American money appeared from another source, however, in 1911. Duquesne had been working in a desultory way for the moving pictures, and he interested one Hite, a functionary in the Thanhouser Film Company, in a plan to explore Central America with a moving-picture camera. Ashton said he also obtained financial support from Frank Seiberling of the Goodyear Rubber Company of Akron, a great patron of sports, and the financier of the ill-fated balloon "Akron" in which Walter Wellman once tried to cross the Atlantic. He set sail in 1911 for Jamaica, where he enlisted the finances of his father-in-law, Wortley, in the project, and then moved on to Guatemala. There he was suspected of revolutionary activities, and after cabling Washington and receiving a satisfactory report from the state department, he was released, and made his way through Honduras to Nicaragua. There he spent some time, and saw something of O'Connell, the railroad man — enough to re-

ceive a pass over all lines of the Nicaraguan railroad.

In 1913 he returned to the United States. Among the papers which we discovered was a record of an insurance policy for a maximum of \$80,000 worth of moving picture film at \$4 a foot, which Duquesne took out with the Mannheim Insurance Company in New York on December 17. He was setting out on another expedition, and he wished to insure his reels of film on shipboard from

“ seas, fires, pirates, rovers, assailing thieves, jettison, barratry of the master and mariners, and all other perils, losses and misfortunes that have or shall come to the hurt, detriment or damage of the said goods and merchandise or any part thereof.”

By a separate certificate the company also insured Duquesne against further risk, thus:

“ It is agreed that this insurance covers only the risk of capture, seizure or destruction by men-of-war, by letters of marque, by taking at sea, arrests, restraints, detainments or acts of kings, princes and people authorized by and in prosecution of hostilities between belligerent nations. . . .”

and off to the Spanish Main and the pirates and the assailing thieves sailed Fritz Duquesne.

His migrations during the years of 1914 and 1915 are not clear. This much is certain: that on June 16, 1915, Sir C. Mallet, the British minister at Panama, wrote to the foreign office in London the following note, setting forth an observation he had made that day in the Zone:

“Through a Canal Zone detective I learnt confidentially that a passenger named Captain F. Duquesne, travelling with a passport issued by the United States Consul at Mañaos, Brazil, had embarked for Trinidad on the R. M. S. *Panama* on the 14th instant.

“My informant stated that Captain Duquesne poses as an American officer but in reality is an intelligence officer in the service of the German Government.

“I have warned the Governor of Trinidad by telegraph so that a watch may be kept on Captain Duquesne’s movements.”

The wily captain had been cruising rather busily through the Caribbean, over the Isthmus, and into South America. His passport connected him with Mañaos, the British message established his presence at Panama and Trinidad, a German war com-

muniqué dated "December 20," and signed by the German consul, Lehmann, in Guatemala, showed that he was an acceptable guest at the outposts of the German Empire. And he had visited Nicaragua before he entered Panama in 1915, for we found in his possession this letter:

"Managua, May 5, 1915.

"Imperial German Consulate
for Nicaragua:

"It is a pleasure for me to recommend to you, my countrymen, the bearer of this, Mr. Fritz Duquesne, Captain of Engineers to the Boer army, very warmly.

"The same gentleman has on many occasions given many notable services to our good German cause.

"The Imperial German Consul,
"UEBERSEXIG."

Enclosed in the envelope was Uebersexig's personal card, reinforcing his recommendation of Duquesne as an accredited German agent.

Trinidad is a good jumping-off place into the far tropics, and it is quite possible that as Ashton said Duquesne disappeared into the interior of Brazil, and "explored the unknown regions of Brazil and the Amazon." It is not hard to find unknown regions of Brazil within a few miles of the coast. He probably did not penetrate far into

the interior, for in January of 1916, he showed up in lower Brazil.

He emerged from the interior as a valiant explorer, preceded by native carriers whom he had hired to transport his precious movie-film. As he approached the port of Bahia Duquesne's personality underwent a perceptible change. Duquesne suddenly became George Fordham. Among his papers we found an application for shipment by a Brazilian broker which read as follows:

"Honorable Superintendent.

"Francisco Figuerado requests a permit to ship for New York via steamer *Verdi* to sail on January 28, 1916, a case as described below:

"Bahia, January 27, 1916.

"Raul E. de Oliveira, Custom House Broker.

"1 case weighing 80 kilos. 00\$500

"One case of potter's earth in dust (samples)"

Potter's earth may have been included in the materials in the case, but that is doubtful, for on October 4, 1916, "Mrs. Alice Duquesne being duly sworn deposes and says that she accom-

panied her husband, Captain Fritz Duquesne, during his trip through Central America in the Spring and Summer of 1914. That in the baggage was an iron trunk used to carry moving picture films and negatives which she presumes to be the same trunk that was subsequently shipped by Capt. Duquesne per the S. S. *Tennyson* from Bahia to New York sailing in January, 1916. That the said trunk was about $\frac{1}{2}$ inch thick, and made of iron about 45 inches in length by 30 inches in height by 26 inches in depth . . . had a hinged cover that overlapped the sides of same, and fastened down with two thumb screws and a lock. That two iron bands went around the trunk and were riveted to same. That the cover was lined with packing where it overlapped the sides of the trunk. That the said trunk was of very solid construction, painted a dark green, almost black, and that two men were required to lift same." Hardly a suitable receptacle for potter's earth. Furthermore, George Fordham, whose handwriting is identical with that of Fritz Duquesne for the simple reason that the two men were the same, on February 11 signed an invoice at the American consulate in Bahia stating that he solemnly and truly declared that the 28,000 feet of moving picture film and the 4100 negatives which he was

DYNAMITE ON THE VAUBAN

BOMBS FOUND IN THE LUGGAGE OF A SUSPECTED PASSENGER—ARRESTED AT SANTOS.

Rio de Janeiro, March 27.
It is reported that on the Lampart and Holt steamer Vauban, which sailed from La Plata on March 17, suspicion attached to one of the passengers shortly after leaving port; he remained continually in his stateroom and took pains to shun all contact with the passengers.

The captain, alive to possible contingencies, called for the man's papers, which appeared to be all right, and represented him to be a Russian. Not quite satisfied, the captain ordered the man's luggage to be overhauled, against which the suspect violently protested. In one of the bags were found several dynamite bombs, for the presence of which the man could give no satisfactory explanation. These were sequestered, and the man put under close guard.

In Santos he was delivered to the British Consul, who turned him over to the police.

In view of the recent criminal explosion on the Tennyson, of the same line it is presumed that an attempt to sink the Vauban was intended.

FORM No. 129—CONSULAR.
(Revised December, 1903)

Invoice of Returned American Goods and Declaration of Foreign Exporter.

AMERICAN CONSULAR SERVICE,

Bahia, Brazil, February 11, 1916.

I, George Fordham, do solemnly and truly declare that the several articles of merchandise herein specified are, to the best of my knowledge and belief, truly and bona fide of the growth (or production or manufacture) of the United States; that they were exported from the United States, from the port of New York on or about November, 1913; that they are returned without having been advanced in value or improved in condition by any process of manufacture or other means; and that no drawback, bounty, or allowance has been paid or admitted thereon or on any part thereof.

(Signature) George Fordham

1. A significant clipping found in Duquesne's effects
2. A German Communique found on Duquesne
3. The United States Customs invoice by which Duquesne, as "George Fordham," shipped his "Films"

shipping back to the United States were to the best of his knowledge and belief of the manufacture of the United States and had been exported from the United States in 1913.

The *Tennyson* sailed quietly out of the river-mouth into the Atlantic and Duquesne vanished just as quietly. On February 26, when the ship was coasting along the Brazilian forest toward the Equator, a terrific explosion occurred in her hold, and three sailors were killed. The iron trunk never reached New York. The news of the catastrophe set fire to the British in South America and the English press seethed with such paragraphs as this — which we found in Duquesne's papers, clipped from an Argentine newspaper:

“ Rio de Janeiro.

“ The confession of the clerk Bauer, arrested in connection with the *Tennyson* outrage, which led to the discovery of the papers and funds of the band of German bombers in an English safe deposit institution reveals a plot of far-reaching consequences fraught with danger to the neutrality of a number of South American republics, as well as peril to the lives of their citizens.

“ Besides a number of important documents, the police seized \$6,740 in American bills, which were in an envelope marked ‘ On His Majesty's Service ’ and addressed: ‘ Piet Naciud. ’ When

this name was published it caused quite a shock in the Allied circles here, as this man always cultivated their society and even recited at their benefits. He was ever loud in his denunciations of the Germans, and as he was a Boer, or pretended to be one, was doubly liked for his seemingly praiseworthy attitude. Little did the English dream that they were harbouring a black-hearted spy in their midst whom they now know as one of the leading plotters whose audacity is beyond belief. The safe deposit was in his own name, and he gave his home address as Cape Town. Neither he nor the agent Niewirth and his fellow conspirators have yet been arrested. It is believed that they left with Naciud in a powerful motorboat that he owned."

How Captain Fritz Duquesne, alias Fordham, alias Naciud, must have chuckled as he sat safely in the neutral Argentine and read this flattering tribute to his audacity. For he did turn up presently in Buenos Aires, and embarked on a new audacity — nothing less than collecting the insurance of \$80,000 for the loss of the film which he claimed to have shipped in the iron box!

Let Ashton take up the story:

". . . his wife . . . tried to collect the insurance, but was advised that she would have better chances . . . if he would disappear. He then assumed the name of Fredericks. In 1916 a re-

port was published in the New York *Evening Post* and the New York *Times* that he had been assassinated by Indians in the interior of Bolivia, and being interested I called at the office of the N. Y. *Post* and asked Mr. A. D. H. Smith, editor, to look this report up, and he found that the report came from the Associated Press, the same being signed 'Fredericks.' They also had a cablegram signed, 'Captain Duquesne,' and it said: 'I am still alive.' The report also said that he was the sole survivor of an attack from the Indians and that he was somewhere in Bolivia recovering in a hospital, the location being unknown. He sent the message signed 'Fredericks' himself from Buenos Aires.

"He then became connected with the Board of Education of the Argentine, supplying films for the schools, and a certain politician in Buenos Aires claims he gave him \$24,000 with which to purchase films (certain educational films). He claims to have come to New York with a man named Williamson and purchased the films, paying \$24,000 in cash."

Mrs. Duquesne was already in New York, having a hard time collecting her claim against the German-owned Mannheim Insurance Company for the "sympathy verdict" for damage to the

films. He stored the new films he claims to have purchased in the Fulton and Flatbush Warehouse, 437 Carlton Avenue, Brooklyn — stored them as “statuary,” and used to visit the warehouse frequently. On one occasion he arrived after hours, and tried unsuccessfully to bribe the watchman to admit him. He moved to a small hotel in Elizabeth, New Jersey, and about two weeks after the storage of the cases of “statuary” in the Brooklyn warehouse, the warehouse mysteriously caught fire.

By a queer coincidence the “films” — Duquesne has never proved that he did buy them — which of course were destroyed in this fire too, had been insured by their purchaser, “Mr. Frederick Fredericks,” for \$33,000 by the Stuyvesant Insurance Company, and he set out to collect the \$33,000 for the total loss of his property. If both claims proved successful, he and his wife would have gathered in some \$113,000. But they found it one thing to be insured and another thing entirely to get the money. Times were not treating Duquesne well.

Along in July, 1917, when the United States was in the throes of buckling down to the business of war, and Washington was sweltering under its increased load of war-time population and

business, Ashton, Duquesne's old friend, happened to have business in the capital. He dropped in to call on Robert F. Broussard, of New Iberia, Louisiana, who in 1915 had been elected senator from this state . . . the same Broussard who had been the author of the hippopotamus bill. Ashton asked the United States Senator from Louisiana if he had heard from Captain Duquesne. Ashton continues: "his secretary overheard the conversation (his secretary is a charming young lady) and I took her out to dinner, and about five days later she wrote me and said, 'You may be interested to know that Captain Duquesne is in Washington, but does not want it known.' I immediately became interested and concluded that if Captain Duquesne was in Washington and did not want it known, especially to me, I . . . would investigate. So I went to Washington . . ." and learned something of Duquesne's whereabouts and circumstances.

"After hearing this story in Washington," Ashton continues, "I learned that this man was in desperate need of assistance and I offered to help him in any way that I could. . . . Senator Broussard was trying to secure a position for him with General Goethals, . . . also at this time he had plans on file with the Secretary of the Navy,

of an invention to destroy mines in harbors, and was hoping that he might secure a position with the Navy Department. I had been offered a position with George Creel, and I also introduced Duquesne to him, and I then got in touch with Major Kendall Barnelli. I advised him to listen to Duquesne and to give him a position. I also advised Barnelli that I was investigating Duquesne's story."

Damon Ashton then brought Pythias Duquesne back to New York and put him up in the apartment in which the Bomb Squad men had first been called to investigate the theft of papers. Duquesne begged his friend not to make him known under his own name, as the insurance case for the warehouse fire was still pending. So Duquesne continued to masquerade as "Fredericks." His health was poor, and he did not go to work at once. At times Ashton's charity seemed to irk Duquesne, and he even went to the telephone and called up an agency to discuss a lecture tour. The lecture agents told him that only war lectures were making money. There was a real inspiration, and after working for several days to assemble a uniform of the West Australia Light Horse, correct in every detail, he dressed up in it and called at the lecture bureau as Captain

Claude Staughton. His Australian experience as chaperone to the camels stood him in good stead, and he went about town mixing with British Army officers without arousing suspicion. He even got on famously with the late Sir George Reed, prime minister of Australia, whom he met one night at the Hotel Astor.

The Pond lecture folk took him up and arranged a tour for him. Consciously or unconsciously, they swallowed Duquesne whole. They had him photographed in his new uniform, with the ribbons of three decorations over his heart, and they reproduced the natty figure on the cover of a publicity folder announcing the subjects on which Captain Claude Staughton was prepared to talk. "Captain Staughton," read the folder, "has perhaps seen more of the war than any man at present before the public. . . . He wears ribbons showing that he has received five medals: two of these the King's and Queen's for service in the Boer war, carrying seven clasps; one is for service in Natal, and two for bravery in saving lives. A sixth French medal for which he has been cited is yet to be awarded. At the outbreak of the Boer war, Captain, then Lieutenant, Staughton, was an officer in one of Australia's crack horse regiments, the Mounted Rifles. He went with his regiment

to Africa, and served in Cape Colony, Orange Free State, Transvaal, Natal and Basuto Land. He was with Kitchener at the Battle of Paardeburg when General Cronje was captured; was with Lord Roberts at the Capture of Bloemfontein; at the fall of Johannesburg and the seizure of Pretoria. Later, in pursuit of DeWet's army, he was attached to General Knox's flying column as intelligence officer and commandeering officer for the Australian Bushmen. He later entered the Cape forces and took active part in the clearing up of Basuto Land, and in the last Natal insurrection he fought with the Natal forces."

That is a mere fragment of the fighting in which this eulogy proceeded to sketch Captain Staughton's modest part. New Guinea, Gallipoli, Flanders, the Somme, Arras (illustrated by motion pictures), four times gassed, three times bayoneted, once pronged by a German trench-hook — those were the high lights of the career which, the folder assured the public, had finally brought him face to face with the most fearless lecture audience in the world — the United States. He would be pleased to lecture on the story of the Anzacs, underground warfare — or, on "German Spy Methods," of which "he had learned much in Egypt."

One of the sub-topics in this lecture on German spy methods was this: "Germany pays nothing for its spying on us.— We pay it all.— How long will we stand it?"

Well, we stood it for a long time — too long a time by half. But not long enough to permit Captain Staughton to lecture before many audiences, nor to ask this question too frequently. He gulled a few suburban Sunday schools, but his arrest put an end at least to his attempt to pick up a bit of odd change by collecting insurance.

For the steamship *Tennyson* was British territory, and, as this is written, the report comes that this picturesque charlatan is going back across the Atlantic, to be tried for the murder of a British sailor. So begins the last chapter in the story of Fritz Duquesne.

X

THE PRUSSIAN, THE BOLSHEVIK, AND THE ANARCHIST

We caught a glimpse, in the chapter describing the attempt to wreck St. Patrick's Cathedral, of the peace-time game of the anarchist group; we looked into their meeting places and their disorderly minds; and those of us who are familiar with the localities which were their haunts in New York City will have been enabled to visualize with some clearness the squalid surroundings in which they worked. War gave them new opportunities, and possibly a few high-lights which the Bomb Squad caught of the anarchist, I. W. W., and Russian activities since 1914 may prove to be readable. If they are readable the author should be content, but he will not be unless he has put before his people something which may serve as a warning for the period of readjustment which the end of war has opened.

An anarchist publication appeared in New York, dated November 15, 1918, four days after Ger-

many had signed the armistice, with this legend on its front page, in large type:

“The War Is Dead: Long Live the Revolution!”

It reflects the joyful frame of mind with which orthodox anarchists received the news of peace, and hailed the beginning of what they thought would be unrestrained guerilla warfare on law and class. They had done very little to help the war, and their two chief figures, Emma Goldman and Alexander Berkman, were in prison for obstructing the draft of America's army. Yet the anarchists as a class were extremely happy. Let us review some of the reasons why.

On October 25, 1915, Har Dayal, who had fled at the outbreak of war to the protection of Berlin, where he was placed in charge of the Indian Nationalist Committee, wrote from Amsterdam, Holland, to Alexander Berkman in New York. The letter follows:

“Dear Comrade:

“I am well and busy and sad. Can you send me some earnest and sincere comrades, men and women, who would like to help our Indian revolutionary movement in some way or other? I need the coöperation of very earnest comrades. Perhaps you can find them in New York or at Paterson. They should be real fighters, I. W. W.'s or

anarchists. Our Indian party will make all necessary arrangements.

“If some comrades wish to come, they should come to Holland. We have a centre in Amsterdam, and Dutch comrades are working with us. If some comrades are ready to come, please telegraph me from New York to the following address:

“ ‘Israel Aaronson, c/o Madame Kercher,
 “ ‘ 116 Oude Scheveningerweg,
 “ ‘ Scheveningen, Holland.’

“My assumed name is ‘Israel Aaronson.’ Kindly don’t telegraph in your own name. The word ‘yes’ will suffice. The Rotterdam-America Line will receive instructions from us here to give tickets, etc., to as many persons as you recommend. All financial arrangements will be made by our party.

“News from India is good. We have lost (?) some very brave comrades in the recent skirmishes.

“It would be better if you could intimate in your telegram how many comrades wish to come. For instance, put the number in some sentence. I shall understand. e. g., Five months’ holiday coming. Etc., etc.

“The need for the services of comrades is urgent. Please do come to our help. We are fighting against heavy odds.

“With love and respect.

“Your for the Fight,

“HAR DAYAL.”

Lieutenant Commander Spencer Eddy

“ P. S. Kindly be very careful in keeping everything secret and confidential. When comrades arrive they should go and see Domela Nieuwenhuis, 20 Burgmestre Schooklaan, Hilversum (near Amsterdam). He will tell them where to meet me. Please also write a letter to the above address in Scheveningen, in addition to the telegram. Telegram may be intercepted.

“ H. D.”

Not satisfied apparently that this letter would reach Berkman, Har Dayal wrote another a week later, which read as follows:

“ Address: Israel Aaronson,
“ c/o Madame Kercher,
“ 116 Oude Scheveningerweg,
“ Scheveningen.

“ Dear Comrade:

“ I am well and busy. Can you send me some earnest and sincere comrades men and women, to help our Indian revolutionary party at this juncture? They should be persons of good character. If Tannenbaum is free, would he like to come?

“ Please keep this matter strictly *secret* and *confidential*. Kindly don't discuss it with too many people.

“ This is a great opportunity for our party. I need the coöperation of earnest comrades for very important work. Several of our comrades have come from India with encouraging news and messages.

“If some comrades can come, please *wire* and *write* to the above address to my assumed name, ‘Israel Aaronson.’ I shall send you money immediately to the name which you telegraph. Let it be a name beginning with a B. I shall understand. Please don’t telegraph in your own name.

“Kindly also word the telegram in such a way that I can understand how many comrades are coming. If five comrades wish to come, please wire:

“ ‘Five hundred dollars job vacant come.’ Just put the number of comrades before the ‘*hundred.*’ Or use any other device.

“Kindly also send me names and addresses of the prominent anarchist comrades in Denmark, France, Norway, Sweden, Switzerland, Italy, Germany, Austria, and other European countries. Please also send letters of introduction for me to them from Emma or yourself, if you know them.”

And so on. There is enough to show the company the Hindu-German intriguers kept, and to show that the Hindu committee in Berlin had enough money to buy mercenaries from the American anarchist group, for which the American brokers would hardly go unrewarded. Rintelen, within a week of his arrival in the United States in May, 1915, had tried to hire anarchists to blow up shipping and start strikes in munitions plants.

It further shows that during that week in October of 1915, Har Dayal had a bright thought that if he could only get letters from Emma Goldman or Berkman introducing him to the anarchists of Europe, and could perhaps introduce to them in turn his lieutenant, Frank Tannenbaum, from America — the same who stormed St. Alphonsus' church with a gang of I. W. W.'s in 1914, demanding food — he could hoodwink the anarchists into believing that he was playing their game, and really make good use of them in playing his game — which of course was Berlin's.

As it happened, Tannenbaum was busy. So was Emma. So was Berkman, who received the letter. He was just formulating plans to go to San Francisco and become an editor — not a new avocation, for he had for ten years helped Emma Goldman issue a publication known as "Mother Earth" — and to carry out certain radical and novel ideas. Before we sketch the way in which he put those ideas on paper, it may be well to see what experiences he had had to generate ideas, and just what promise his career contained that he would be of guiding benefit to these United States.

Alexander Berkman was a Russian by birth, and was then about 44 years old. When he was a youth of 20 he became involved in the famous

Homestead strike in Pennsylvania, and on July 22, 1892, he burst into the office of Henry Frick, a steel manufacturer, in the Carnegie Building in Pittsburg and shot that gentleman in the neck. He then went to the Western Penitentiary and served fourteen years. This qualified him as a rare martyr among anarchists. After he got out of prison he was occasionally arrested in various cities, for wherever he appeared among advocates of violence there was pretty certain to be trouble. The long prison term had given him a chance to develop his mind, and he had written 512 pages on "The Prison Life of an Anarchist," which the "Mother Earth Publishing Company" brought out, and which sold for \$1.15 — a very interesting book indeed.

So he went to San Francisco in the fall of 1915. A short time before he left New York his friend Bill Shatoff gave him a farewell dinner. As the evening wore on the diners adjourned to the neighborhood of Second Avenue and Fifth Street for a frolic, and Berkman and Shatoff playfully mauled a policeman, and took his club away, for which both men were arrested. But that did not interfere long with Berkman's departure for the Coast, and the purpose and fruit of his journey appeared within a short time.

Major Fuller Potter, Military Intelligence

It was called *The Blast*. According to its own description *The Blast* was a revolutionary labor weekly, which meant that it preached revolution every so often to those who had a grievance against their employers and to those who had no employers but who had a deep contempt for anything of the sort. Alexander Berkman appeared as editor and publisher, E. B. Morton as associate editor, and M. E. Fitzgerald as manager. It sold for five cents a copy, unless you bought it in bundles, in which case you paid half that price.

In the first issue, dated January 15, 1916, the title of the paper is explained by the editor. "Do you mean to destroy?" he asks. "Do you mean to build? These are the questions we have been asked from many quarters by inquirers sympathetic and otherwise. Our reply is frank and bold: We mean both: to destroy and to build. For socially speaking, Destruction is the beginning of Construction. . . . The time is NOW. The breath of discontent is heavy upon this wide land. It permeates mill and mine, field and factory. Blind rebellion stalks upon highway and byway. To fire it with the spark of Hope, to kindle it with the light of Vision, and turn pale discontent into conscious social action — that is the

crying problem of the hour. It is the great work calling to be done. To work, then, and blasted be every obstacle in the way of the Regeneration!" In a congratulatory telegram in the same issue, Emma wrote to Alexander: "Let *The Blast* re-echo from coast to coast, inspiring strength and courage into the disinherited, and striking terror into the hearts of the craven enemy, now that one more of our brothers has fallen a victim to the insatiable Moloch. May *The Blast* tear up the solidified ignorance and cruelty of our social structure. Blast away! To the daring belongs the future."

A sample of the methods by which *The Blast* proposed to begin its regeneration of the disinherited is this delicate editorial paragraph:

"Judas Made Respectable.

"Judas Iscariot delivered the Nazarene agitator into the hands of the Roman District Attorney. This base betrayal incensed the people against the mercenary stool-pigeon. Judas had enough decency to go and hang himself."

A slap evidently at the person whom Emma referred to in her telegram, who had just sold out to Moloch.

It was a cardinal principle of the paper to be

scurrilous and direct in its attacks upon the enemies of anarchy. General Harrison Grey Otis, a Los Angeles publisher whose newspaper building was bombed in 1912 after labor trouble, was referred to as "General Hungry Growl Otis," Colonel Roosevelt as "The Human Blowout." The leading cartoon of the second issue, drawn — and well drawn — by Robert Minor, showed a huge figure of a laborer bearing on a tray the figure of a tiny though corpulent judge, its mouth open in speech, and its chair guarded by three stolid elephantine policemen. The laborer is bearing the dish to a feast of anarchists, the title of Minor's contribution is "The Court Orders —." The court had evidently ordered in the direction of *The Blast*, and Berkman did not like the order. In the same issue he wrote editorials against conscription in England, against the convention of the American Federation of Labor which had just been held in San Francisco, against its president, Samuel Gompers, and against national preparedness.

I have quoted these extracts not because they are specially interesting or readable, but because they will give one who is not wholly familiar with the practical platform of anarchy a suggestion of

anarchy's tone of voice. It is not friendly, but is on the contrary quite snobbish. Selig Schulberg, in an article on Mexico, gently suggested: "Toilers of America, if the Hearsts, Otises and Rockefellers have property, for which they want protection, in Mexico, let *them* protect it!" The editor says: "The Fords, the Bryans, the Jane Adams may be sincere. If so they are blind leaders of the blind." A writer signing himself "L. E. Claypool," wrote, under the title "Preparedness is Hell," this tribute to our tortured Ally in Europe: "Most of you gents that yell (i. e., yell, 'What about Belgium?') never heard of Belgium till this war broke out. A lot of you probably don't know that the language of the Belgians is French. Further, you don't know that Belgium had a treaty with England and France which placed the little nation in the war before the German invasion. You may not know that French and English engineers and military experts had surveyed the land and were preparing to make it a battle ground long before the Germans did so." That statement was typical German propaganda of a very crude sort, calculated to appeal by its insinuation to the class of readers who affected *The Blast*. The platform of the paper, in a word, was Against.

Berkman was in a rich field for labor unrest. California is a strong labor state. The whole country, outside as well as inside California, had been excited over the *Los Angeles Times* bomb affair in 1912, and it revived that excitement when two of the culprits were prosecuted three years later. One finds constant reference to the case in the files of *The Blast*, and to the strikes at Lawrence, Mass., and Ludlow, Colorado, and Youngstown, Ohio. Anti-capitalistic rough-house in any corner of the continent was good copy for Berkman. If it flagged for a moment he took up the cudgels for his friend Emma, who had just been arrested in New York and sentenced to the workhouse for distributing birth-control literature. Or he dove into international relations, comparing in one instance Villa and President Wilson, with little mercy for the latter. The issue of April Fool's Day, 1916, carried a leading editorial directed against the Pacific Coast Defense League, just organized to bring the national guard of the Pacific and Mountain states into a condition of higher efficiency and to start a program of "healthy physical and military training" in the public schools. This editorial was signed by Tom Mooney, who soon appeared in the columns of the paper in another capacity.

The publication did not go unheeded by the Post Office department. On May 1 Berkman burst out with an article headed, "To Hell With The Government," in which he used language that would make any ordinary head of hair curl up. He was angry because the Government had issued an order holding up all succeeding issues of the paper. In an editorial he said he welcomed the uprising in Ireland — the Easter Day affair in Dublin which cost several Sinn Feiners their lives. Other anarchistic publications in the country were meeting the same fate. *The Alarm*, in Chicago, *Revolt* of New York, *Regeneracion*, a Mexican revolutionary sheet issued in Los Angeles, and *Voluntad*, a Spanish paper in New York, were closed up. But Berkman went on publishing, and howling about the constitutional freedom of the press. Back in New York other friends of his had been making more trouble: Mrs. Max Eastman and Bolton Hall were arrested for circulating birth-control pamphlets, and Bouck White was jailed for distributing an effigy of the American flag bearing a dollar-mark. Berkman took up their cases and howled. He sent appeals for help in his fight against the Post Office department, and raised a little money. One of his liberal contributors was a writer named John Reed, who sent him

five dollars from New York. Then a strike broke out, fostered by the I. W. W., on the iron ranges in Northern Minnesota, and William M. Haywood wrote Berkman an appeal for help which the latter published in *The Blast* with a eulogy. He found no dearth of subjects to fill his pages, and then suddenly came an interruption.

San Francisco turned out in a great preparedness parade on July 22. Someone threw a bomb into the ranks of the marchers. Nine people were killed. The next issue of *The Blast* said substantially: "Well, they might have expected it," and said actually: "To try to connect the Anarchists, the I. W. W., the Labor elements or the participants in the peace meeting with the bomb tragedy is stupid. The act was obviously the work of an individual who evidently sought to express his opposition to Preparedness for Slaughter by using the ammunition of Preparedness. Terrible as it is, it is merely a foretaste in miniature of what the people may expect multiplied a million times, from the Preparedness insanity." When two men, Nolan and Tom Mooney, were arrested and charged with the crime, *The Blast* rushed to their defense. When Warren Billings and Israel Weinberg were added to the list of accused, *The Blast* ran sketches of

the defendants by Minor, the staff artist. The case was of consuming interest to the anarchist group, and they rubbed their hands, in *The Blast* office, over their good luck that it had happened right in their own little circle. *The Blast* ceased firing random shots and focussed on the bomb case in salvos, followed the course of the trials, drew a parallel between the condition of the San Francisco suspects and that of Fielden, Neebe and Schwab, three of the anarchists who were implicated in the Haymarket bomb outrage in Chicago in 1886 and pardoned.

The business of being an anarchist became surrounded with more and more difficulty as the year drew toward a close. Caplan, the fourth Los Angeles bomb suspect to be tried, was convicted and sentenced to ten years; a group of laborers who had engaged in violence in strikes against the United States Steel Corporation were under sentence in a Pittsburg prison; Carlo Tresca (whom we recall as a speaker at the Brescia Circle in 1915), and ten others were in jail in Duluth charged with murder in the I. W. W. strike on the Mesaba Iron range; the Magon brothers, two Mexican revolutionary anarchists, were in prison, and the days of *The Blast* were numbered. Berkman came back to New York in the fall. While

Lieutenant A. R. Fish, Naval Intelligence

he was absent, *The Blast* sputtered once more in its issue of January, 1917, with a venomous cartoon by Minor, and went out, for want of funds.

Berkman found Emma Goldman well and prosperous. She had visited him in March in San Francisco, and again in June and July had delivered two series of birth-control lectures there. After her first visit, *The Blast* had blossomed out with a book advertisement, which included the list of volumes sold by the Mother Earth Publishing Company in New York. There were the usual texts on anarchy, revolution, and syndicalism, and it is interesting to note among the books sent to Berkman for review the following titles: "A Few Facts About British Rule In India. Published by the Hindustani Gadar, San Francisco," "India's 'Loyalty' to England. Published by The Indian Nationalist Party," and "The Methods of the Indian Police in the Twentieth Century. Published by the Hindustan Gadar." Har Dayal had been the editor of *Ghadr* until 1914; apparently his acquaintanceship with Berkman was being kept fresh by his successors at the nest of Hindu intrigue in Berkeley.

But when Berkman got back to New York he found that birth-control was no longer the thing. A new development had taken place, half-way

around the earth, and it looked promising for the anarchistic interests. So we must leave the two for a moment.

On January 9, 1917, the Russian premier resigned. A fortnight later the newspapers announced that the Germans had recaptured considerable important ground on the Riga front. On February 3, the United States severed diplomatic relations with Germany, gave Bernstorff his papers, and sent him home two weeks later. On March 11 a revolutionary demonstration broke out in Petrograd, and the next day the Czar of All the Russias abdicated his throne. A new cabinet was formed, its foreign minister told the Allies that Russia would continue to fight, and the United States recognized the new régime. The news was hailed with a good deal of fraternal spirit in America, and with special cordiality in New York, where there were great numbers of Russians who had left Europe to escape the persecution of the old régime.

Many of the New York Russians knew what was going to happen in Petrograd. The Bomb Squad made friends with an anarchist as early as February 1, 1917. On that day at a spot not far from where Shatoff and Berkman had attacked the policeman a year before, a certain

Mr. Plotkin met a Mr. Bogdanovitch. Plotkin urged Bogdanovitch to call a special conference of all the revolutionary organizations in the city to protest against militarism. "No," said the conservative Bogdanovitch. "Our group will either have to pass a resolution as a single unit, or else go over to Group 2 and see what they are doing about this news that we are going to have war. Don't be too ready to jump to conclusions." So the two went to call on Group 2, which was in session — some 50 Russians and Russian Jews, who spent the evening harmlessly reading the war prospects from American newspapers. No resolution was passed.

The next night, however, there was a lecture at Beethoven Hall, at 210 East 5th Street. The speaker was introduced as "Mr. Bornstein," who had just returned from Russia. "Mr. Bornstein" was Leon Trotzky.

Trotzky, using the Russian language, told of the plans that were being developed for revolution. "You anarchists here," he said, "don't want any militarism or any government which is of no help to the working class, and is always ready to fire on the workman. It's time you did away with such a government once and forever!" After his speech, the chairman, Comrade G. Chudnofsky,

rose and addressed the crowd of 300 in the hall, to this effect:

“Comrades, some of you can’t read English. You don’t know what is going on until you see it in the Russian papers. Only to-day I noticed that the Police Commissioner is going to call out all the reserves he can get to handle the situation, since Germany notified America what she would do. The capitalistic government is *afraid of us!* They are afraid of the working class. Remember that, for in case of war, we can protest against militarism and start our own war. Here is a resolution which I propose to prevent any of our loyal number joining the army. I will read it.” And he read it.

The next day Bill Shatoff was scheduled to speak at a meeting at Number 9 Second Avenue, but he was suddenly called to Boston, and a substitute took the platform. He was howled down because he made a speech which reflected loyalty to the United States. The audience consisted of 75 Russians, of whom some 30 were anarchists known to the Bomb Squad. The United States severed diplomatic relations with Germany that night.

On February 4 the representatives of several of the Russian anarchist groups were to meet at

534 East 5th Street and pass the resolution against militarism, but they could not agree upon it, and the session ended by postponing the matter. Most of the delegates present adjourned to 64 East 7th Street (almost within earshot of the Washington Arch), to hear Chudnofsky rave against enlistment, the police, the government and the war.

Those little meetings were typical of the eruptions which occurred throughout the poorer districts of the great city during the remainder of the month of February. Such propagandists as Chudnofsky and Trotzky, uttering their exhortations to a multiplication of such groups as gathered in the Fifth Street house, spread among the gossipy East Siders and into the remotest slums the news that great things were about to happen in Russia, and rumor and expectancy set the stage for the arrival of the news of the revolution on March 12. The leaders then began to mobilize their forces and act quickly. Under Shatoff, Schnabel and Rodes the revolutionary fire was passed along from one to another. The story was that Russia was free, reclaimed from Czarism and all that it had meant of oppression.

The lid was off, and it was a case of first come, first served. The Provisional Government was

no better than any other, these men said. "Russia shall be ours." "How?" asked the eager disciples. "By helping yourselves," answered Shatoff and Schnabel and Rodes. "That's all very well," said the proletariat, "but we haven't the price." "Oh, in that case, come to the farewell meeting on March 26 for Leon Trotzky, at Harlem River Casino, and all will be made clear to you."

Some 800 people were at Trotzky's farewell party, which was held under the auspices of the German Socialist Federation. Alexander Berkman and Emma Goldman were among those present. A blond Russian made a speech in which he said: "Comrades, some of us are going back to Russia to push the revolution as we think it ought to be pushed, and those who remain here must get ready to do their share of the work as it ought to be done." Trotzky then rose and speaking first in German, then in Russian, repeated the advice the previous speaker had given, and added: "You who stay here must work hand in hand with the revolution in Russia, for only in that way can you accomplish revolution in the United States." He was cheered to the echo.

(There are still those who wonder why we have not recognized the Bolsheviki.)

The pier of the Norwegian-American line the next morning was a strange sight. Trotzky, with his wife, Chudnofsky, Plotkin, and a group of fifty more Russians, including such names as Muhin, Rapaport, Dnieprofsky, Yaroshefsky and Rashkofsky, sailed for Norway. An undersized, wild-eyed, fanatic little plucked-bantam of a Russian expatriate literally set out from Hoboken to upset the Provisional Government of Russia, prevent the formation of a republic, stop the war with Germany and prevent interference from other governments — that was his open boast. And, if such a mission can be crowned with success, he succeeded.

The leaders of the groups left behind began that very afternoon to examine recruits for the return to Russia. They met at 534 East 5th Street and elected a committee of five to serve as examining board for applicants for the \$20 to \$50 free passage money extended by the Provisional Government to help Russians who had fled the persecutions of the old days to repatriate themselves. It is unnecessary to state that the Provisional Government hardly knew how thoroughly these homing pigeons were going to re-establish themselves. All those who passed muster were put down for a sailing date.

The Norwegian ship bearing Trotzky and his party put into Halifax and the British detained the entire passenger list. On April 15 a mass meeting of anarchists, socialists, and Industrial Workers of the World was held at Manhattan Lyceum to make a formal protest to the British government against their detention. Krensky asked for their release, and they were allowed to go on. By this time a second consignment had left, but by a different route. On April 3 George Brewer, H. Gurin, Mr. and Mrs. David Rohlis, one Kotz, one Schmidt, one Nemiroff and 27 others left the Pennsylvania Station for Chicago, Vancouver, Japan and Siberia. On April 23 Comrades Bogdanovitch, Bendetsky, Albert Greenfield, John (or Ivan) Stepanoff, Michael Smirnoff, Henry Shklar and 89 more left on the Erie Railroad for Seattle, Japan and Siberia. On the 12th day of May, "Dynamite Louise" Berg, sister of the anarchist who was killed July 4, 1914, by the accidental explosion of a bomb, boarded the steamship *United States* of the Scandinavian-American Line in Hoboken for Christiania and Russia. On that ship sailed nearly a hundred others of the anarchist and revolutionary element. Ninety more, including Sokoloff, a prominent I. W. W., left for San Francisco

Captain John B. Trevor, Military Intelligence

and Japan two days later. On May 26 Mrs. Bill Shatoff, with Alexander Broide, J. Wishniefsky, and 18 more members of the Coöperative Anarchist Organization sailed from Hoboken on the *Oskar II*. Two days passed and Meyer Bell, an anarchist who had seen the inside of many an American jail for revolutionary agitation, and Mrs. Meyer Bell, with 110 others took their departure for San Francisco and the Orient. The last consignment but one, a group of 90 more potential Bolsheviki, followed them on June 24.

Shatoff and Wolin waited until their flock had been herded out of the country, and then vanished themselves. No one knew their route, but they were heard from in Seattle. Altogether some 600 anarchists made the pilgrimage. Some never reached Russia. Others who did get back found that conditions offered slim picking, and the Chinese and Manchurian ports are sprinkled with them to-day — men without a country, who cannot live in Russia, and who may not return to the United States.

Those who did get through to the capital of Russia straightway joined the organization. Trotzky had found Lenine there with plans already well advanced. The Provisional Government superficially was adequate to handle the sit-

uation, and during June it gave some slight promise of being able to prosecute its share of the war, but a breach was coming. A Council of Workmen and Soldiers had sprung up to oppose the Duma and the government when the Duma voted for an immediate offensive in Galicia, the Council voted for a separate peace. Kerensky swung himself back into balance for a month, and led a military offensive. It turned into a retreat, the retreat into a rout. Korniloff took command of the army on August 2, and the following day the military governor of Petrograd was assassinated. The deposed Czar was taken to Siberia. On September 2 Kerensky tried the expedient of arrest against his rising enemies in Moscow. On September 16 he proclaimed a new republic, but political structures could not keep out the terrifying German military advance that already was threatening Petrograd nor the German propaganda which was already there. Mid-October saw the government in flight to Moscow. On the 21st of October Leon Trotzky, at the head of the Bolsheviki in the Council, declared his party for an immediate democratic peace, and left the hall at their head, cheering. Municipal elections on November 1 rejected the Bolsheviki, but they would not be rejected, and on November 7 the

Maximalists deposed Kerensky and took possession of the Government. Lenine became premier, Trotzky minister of foreign affairs.

The New York delegation won influential positions under the new régime. A United States senator has described the current Russian government as nothing but "Lenine and a gang of anarchists from New York, Philadelphia and Chicago." Wolin took charge of a branch of the press — a sort of commissioner of public misinformation. Shatoff, in America a humble syndicalist and I. W. W., rose to the eminence of chairman of the "Extraordinary Commission for the Struggle Against Speculators and the Counter Revolution" in Petrograd, a commission whose activities are perhaps better described by its common title in the capital. It is called the "Blood and Murder" or the "To the Wall" committee. He has filled in his spare time as Commissioner of Railroads, and has been commonly credited in Petrograd with the murder of the Czar and his family. Ouritzky, Shatoff's predecessor at the head of the Committee, had amassed a fortune of some four million roubles during his tenure of office. He died a violent death. Shatoff, in October of 1918, had not followed suit. The same John Reed who contributed to the support

of the *Blast* appeared in Petrograd as a sympathetic correspondent, and was made consul to New York — a portfolio which he was unable to use when he returned to New York because of his indictment, along with Max Eastman and several other editors of a paper known as *The Masses*, for attempting to obstruct the draft. The balance of the New York anarchists who made up the expeditionary force of 1917 found their way, such of them as escaped the rigors of Petrograd life, into positions of influence in the government of one hundred or more millions of Russian people. To be sure, their hold is not too secure, but they are enjoying for the moment a sense of power which is intoxicating. Nothing seems to please a Bolshevik of the New York City group more than power — the same thing he tried to overthrow. I suppose it makes a difference whose power it happens to be.

Neither Goldman nor Berkman returned to Russia. Their publishing and bookselling business kept them here, and both were always in demand as lecturers. Both had pictured themselves for many years as the champions of anarchy in the United States, and it is conceivable that they did not wish to pass over their sceptres to any less well qualified successors. Unlike the ringleaders

of the I. W. W., these anarchists did not dodge real work. Both had active minds, and were happiest when they were busy. Berkman's writing at times shows a certain cheerful tenderness underneath its bombast, and Emma Goldman had a rather good-natured sarcasm at times as a speaker.

The two cast their lot in with the pacifists, the anti-conscriptionists, and the factions whose chief aim was to interfere with America's going to war. Emma began to lecture on the subject. On the night of May 18 she spoke to a meeting in the Harlem River Casino. After a preamble advising the audience that government agents were present and that violence would be out of order, she drew what she probably considered a logical conclusion from this advice and shouted:

"And so, friends, we don't care what people will say about us. We only care for one thing, and that is to demonstrate to-night, and to demonstrate as long as we can be able to speak, that when America went to war ostensibly to fight for democracy, it was a dastardly lie. It never went to war for democracy! . . . It is not a war of economic independence, it is a war for conquest. It is a war for military power. It is a war for money. It is a war for the purpose of trampling underfoot every vestige of liberty that you people

have worked for, for the last forty or thirty or twenty-five years, and therefore we refuse to support such a war. . . .

“We believe in violence and we will use violence. . . . How many people are going to refuse to conscript? I say there are enough. I could count fifty thousand, and there will be more. . . . They will not register! What are you going to do if there are 500,000? It will not be such an easy job, and it will compel the government to sit up and take notice, and therefore we are going to support, with all the money and publicity at our hands, all the men who will refuse to register and who will refuse to fight.

“I hope this meeting is not going to be the last. As a matter of fact we are planning something else. . . . We will have a demonstration of all the people who will not be conscripted, and who will not register. We are going to have the largest demonstration this city has ever seen, and no power on earth will stop us. . . . If there is any man in this hall that despairs, let him look across at Russia . . . and see the wonderful thing that revolution has done. . . .

“What is your answer? Your answer to war must be a general strike, and then the governing class will have something on its hands. . . .”

She wound up her speech with an appeal for funds, and said that her paper, *Mother Earth*, was going to support the rebellion against the draft law which had been signed by the president that very day. *Mother Earth* spoke, in her next issue, which appeared shortly before registration day, June 5, and spoke in fairly disapproving terms toward conscription. But the sun went down into New Jersey on registration day without having witnessed the greatest demonstration New York City ever saw, or any demonstration whatever save the quiet, cheerful enrollment of what later became a heroic national army.

On June 15 Emma Goldman and Alexander Berkman were arrested in the office of *Mother Earth* at 20 East 125th Street. On June 27 they were arraigned for trial. On July 9 the jury pronounced them guilty of having attempted to obstruct the draft. Judge Mayer thereupon sentenced Berkman to two years in the Federal penitentiary at Atlanta, Goldman to the state penitentiary at Jefferson City, Missouri for two years, and fined each of them \$10,000. It was a stiff blow to organized anarchy — the maximum sentence possible, and the judge followed it by directing the District Attorney, Harold A. Content, to notify the Commissioner of Labor of the convic-

tion, in order that when the two emerged from prison, they might be deported as aliens convicted of two or more crimes to the country from which they came, bringing uplift to down-trodden America.

Their work has since been carried on in a more or less desultory way. They, too, have become official martyrs to the cause, whose names will be inscribed along with those of Brescia, the Haymarket murderers, and a score of others, on the anarchist service flag. The undercurrent of opposition appeared spasmodically during the war and it became necessary for an Alabama Judge, sitting in the District Court of New York, on October 25, 1918, to impose maximum sentences under the espionage act upon three more advocates of unrest, Jacob Abrams, Samuel Lipman and Hyman Lachnowsky, the ringleaders of a group who circulated leaflets denouncing armed intervention in Russia and advocating a general strike. They were sentenced to twenty years apiece; a fourth member got three years and a \$1,000 fine. A woman in the group, Mollie Steiner, was sentenced to fifteen years.

The efforts at "demonstration" which the imported anarchists in America have employed are neither as picturesque nor as popularly received

as those of their comrades in the old world. Anarchy is out of tune in America. Prussianism has already had its answer from the United States. Bolshevism is not for a well-educated, deep-breathing nation like ours. And anarchy, the poorest wretch of the three, must make terrifying faces through some other window than that of a country full of people who are going to continue to make this democracy safe for itself.

THE END
